

Standard cylinders DSBC, to ISO 15552

Standard cylinders DSBC, to ISO 15552

Key features

At a glance

DIN

- Standards-based cylinders to ISO 15552 (corresponds to the withdrawn standards ISO 6431, DIN ISO 6431, VDMA 24 562, NF E 49 003.1 and UNI 10290)

- Double-acting
- For contactless position sensing
- Optionally with protection against rotation
- Extensive range of accessories makes it possible to install the cylinder virtually anywhere
- Three types of cushioning available:
 - P cushioning: elastic cushioning rings/pads at both ends
 - PPS cushioning: pneumatic cushioning, self-adjusting at both ends
 - PPV cushioning: pneumatic cushioning, adjustable at both ends
- The variants can be configured individually thanks to the modular product system
- Excellent flexibility thanks to the wide range of variants

DSBC-...-C – With clamping unit, standard hole pattern

- Standard hole pattern
- Holding or clamping the piston rod in any position
- Piston rod can be held in position for long periods even with alternating loads, fluctuating operating pressure or leaks in the system

Additional measures are required for use in safety-related applications; in Europe, for example, the standards listed under the EC Machinery Directive must be observed.

Without additional measures in accordance with statutory minimum requirements, the product is not suitable for use in safety-related sections of control systems.

DSBC-...-E1/-E2/-E3 – With end-position locking, standard hole pattern

- Standard hole pattern
- Positive locking in the end position as a drop guard. In the event of a pressure drop, the piston rod is locked in its end position
- Either at one or both ends

Additional measures are required for use in safety-related applications; in Europe, for example, the standards listed under the EC Machinery Directive must be observed.

Without additional measures in accordance with statutory minimum requirements, the product is not suitable for use in safety-related sections of control systems.

DSBC-...-P2 – With protective bellows kit DADB, standard hole pattern

The protective bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air must be ducted via a pressure compensation hole in the

connection part **1**. The kit protects the piston rod, seal and bearings against a wide variety of media, for example:

- Dust
- Chippings
- Oil
- Grease
- Fuel

Ordering the protective bellows kit

An extended piston rod is absolutely essential if a protective bellows kit is to be used.

The protective bellows kit can be ordered via the modular product system or as an accessory. The following must be noted in this case:

Ordering via the modular product system:

The protective bellows kit is supplied mounted on the bearing cap using feature P2. The required piston rod extension is automatically taken into consideration. This means that there is no need to specify a value for the feature ...E.

Ordering as an accessory:

If the protective bellows kit is ordered as an accessory, the required value → 48 must be entered for the feature ...E in the modular product system.

Standard cylinders DSBC, to ISO 15552

Key features

DSBC-... D3 – Sensor slots on 3 sides

The piston position can be sensed on three sides of the drive if the feature D3 is selected in the modular product system.

 Sensor slot for proximity sensor

Position sensing/force control

With position transmitter SMAT-8M

→ 55

Analogue positional feedback possible

- Analogue output 0 ... 10 V

With proportional pressure regulator VPPM

Infinite adjustment of the gripping force possible

- Setpoint input
 - 0 ... 10 V
 - 4 ... 20 mA

Optional accessories

Mounting kit DAVM

→ 50

- For lateral valve assembly, directly on the drive
- Particularly suitable for decentralised use in larger systems
- Mounting is only possible on the side on which the pneumatic connections are located

Standard cylinders DSBC, to ISO 15552

Application examples

Automatic screw machine

For process control

Standard cylinders DSBC, to ISO 15552

Key features

Variants from the modular product system		
Symbol	Features	Description
	Q Square piston rod	Protection against rotation. For correctly oriented feeding
	C Clamping unit	Integrated clamping unit on the piston rod
	E1/E2/ E3 With end-position locking	Positive locking in the end position as a drop guard. If there is a drop in pressure, the piston rod is secured in its end position to prevent it from dropping
	L Low friction	At high piston speeds, considerably greater efficiency than other versions. The special materials considerably reduce system wear. Low-friction movements are therefore possible, especially during rapid stroke movements. Seal contains silicone grease
	U Uniform, slow movement	Low break-away pressure, suitable for slow stroke movements at a constant, judder-free speed over the full stroke range. Seal contains silicone grease
	T Through piston rod	For working at both ends with the same force in the forward and return stroke, for attaching external stops
	F Female piston rod thread	–
	R3 High corrosion protection	All external cylinder surfaces comply with corrosion resistance class 3 to Festo standard 940 070. The piston rod is made from corrosion and acid-resistant steel
	T1 Heat-resistant seals	Temperature range 0 ... +120 °C
	T3 Low temperature	Temperature range –40 ... +80 °C
	T4 Heat-resistant seals	Temperature range 0 ... +150 °C
	A1 Wiper seal variant	Increased chemical resistance: For longer service life, e.g. when using cooling lubricants.
	A2 Wiper seal variant	Hard wiper seal: The cylinder is equipped with a hard-chrome plated piston rod and a rigid wiper seal, which protects against dry, dusty media
	A3 Wiper seal variant	Unlubricated operation: Cleaning processes degrease the piston rod. A special piston rod seal designed for unlubricated operation permits a longer service life compared to the standard seal
	...E Piston rod extension	–
	...L Piston rod thread extension	–

- 1) The max. energy in combination with the trunnion mounting kit DAMT is 0.1 J.

Permissible impact velocity

$$v_{\text{perm.}} = \sqrt{\frac{2 \times E_{\text{perm.}}}{m_{\text{Intrinsic}} + m_{\text{Load}}}}$$

Maximum permissible load:

$$m_{\text{Load}} = \frac{2 \times E_{\text{perm.}}}{v^2} - m_{\text{Intrinsic}}$$

$v_{\text{perm.}}$ Permissible impact velocity
 $E_{\text{perm.}}$ Maximum impact energy
 $m_{\text{Intrinsic}}$ Moving mass (drive)
 m_{Load} Moving payload

Standard cylinders DSBC, to ISO 15552

Technical data

Technical data DSBC-...-C – With clamping unit

- The specified holding force refers to a static load. If this value is exceeded, slippage may occur. Dynamic forces occurring during operation must not exceed the static holding force. The clamping unit is not backlash-free in the clamped condition if varying loads are applied to the piston rod.
- The clamping unit may only be released if the forces at the piston have reached equilibrium. Otherwise, there is a risk of accidents due to sudden movement of the piston rod. Blocking off the air supply at both ends (e.g. with a 5/3-way valve) does not provide any safety.

Piston Ø		32	40	50	63	80	100	125
Clamping type with effective direction		At both ends						
		Clamping via spring force						
		Release through compressed air						
Static holding force	[N]	600	1,000	1,400	2,000	5,000	5,000	7,500
Max. axial play under load	[mm]	0.5	0.5	0.8	0.8	0.8	0.8	1.8
Min. release pressure	[bar]	3						

Technical data DSBC-...-E1/-E2/-E3 – With end-position locking

- End-position locking should only be operated in conjunction with double-acting cylinders with exhaust air flow control in order to ensure that the lock is always completely released prior to starting the drive movement.
- The end-position locking may only be released if the forces at the piston have reached equilibrium. Otherwise, there is a risk of accidents due to sudden movement of the piston rod. Blocking off the air supply at both ends (e.g. with a 5/3-way valve) does not provide any safety.
- Locking can be performed from any stroke position once the drive is brought mechanically into its end position.
- An excessive end-position cushioning setting (more than 50% closed) can result in the locking bolt not engaging reliably, resulting in premature wear.
- The exhaust hole must not be closed.

Piston Ø		32	40	50	63	80	100
Clamping type		Positive locking through stop cylinder					
		Release through compressed air					
Static holding force	[N]	500	500	2,000	2,000	5,000	5,000
Max. axial backlash with end position locked	[mm]	1.3	1.3	1.3	1.5	1.5	1.5
Min. unlocking pressure	[bar]	≤ 2.5		≤ 1.5			
Max. locking pressure	[bar]	≥ 0.5					

Sizing example

When sizing pneumatic cylinders it is recommended as a basic principle that only 50% of the indicated theoretical forces (see above) be used.

Given:
 Installation position = vertical
 Workpiece load = 44 kg
 $F = m \times g = 44 \text{ kg} \times 9.81 \text{ m/s}^2 = 431.6 \text{ N}$

To be found:
 Suitable piston Ø

Example with 32 mm piston Ø:

Theoretical force at 6 bar, advancing = 483 N
 50% of the theoretical force = 241.5 N
 Static holding force with 32 mm piston Ø = 500 N
 The static holding force of end-position locking is within the permissible range (max. 500 N) for a workpiece load of 44 kg (431.6 N), however the cylinder would be at 89% capacity.

Result:

A cylinder with a piston Ø of 40 mm is therefore recommended for this application.

Q – With protection against rotation

Ø 32

Max. torque = 800 Nmm/max. stroke = 300 mm

Ø 40

Max. torque = 1,100 Nmm/max. stroke = 400 mm

Ø 50/63

Max. torque = 1,500 Nmm/max. stroke = 500 mm

Ø 80/100

Max. torque = 3,000 Nmm/max. stroke = 600 mm

Examples for piston Ø 32 mm

Example 1:

Stroke length l = 150 mm

Result: Permissible

lateral force F_q = 9.5 N

Lever arm s = 84 mm

Example 2:

Lateral force F_q = 40 N

Result: Permissible

stroke length l = 28 mm

Lever arm s = 20 mm

Example 3:

Stroke length l = 150 mm

Lever arm s = 100 mm

$F_q = \frac{\text{Max. torque } 800 \text{ Nmm}}{\text{Lever arm } 100 \text{ mm}}$

= 8 N

Result: Permissible

$F_q = 8 \text{ N} < F_{q\text{max.}} = 9.5 \text{ N}$

Q – With protection against rotation

 - Note

In combination with variant T, the piston rod is protected against rotation at one end.

F – Female thread

 - Note

In combination with variant T, the piston rod has female threads at both ends.

...E – Piston rod extension

 - Note

Piston rod extension at one end in combination with the variant T. In combination with variants T and Q, the piston rod is only extended on the square piston rod.

...L – Piston rod thread extension

 - Note

In combination with variant T, the piston rod thread is extended at both ends.

D3 – Sensor slot on 3 sides

 Sensor slot for proximity sensor

Ordering data – Modular product

Ordering table										
Size	32	40	50	63	80	100	125	Conditions	Code	Entry code
Standard	Based on ISO 15552									
	Corresponds to ISO 15552								-N3	
Corrosion protection	Standard									
	High corrosion protection							6	R3	
Temperature range	Standard									
	[°C]	Heat-resistant seals up to max. 120						7	T1	
	[°C]	-40 ... +80						7	T3	
	[°C]	0 ... +150						7	T4	
Particle protection	Standard									
	Bellows on bearing cap							-	8	P2
Wiper seal variant	None									
	Increased chemical resistance									A1
	Hard wiper seal									A2
	For unlubricated operation									A3
EU certification	None									
	[mm]	II 2GD						9	EX4	
Piston rod extension	None									
	[mm]	1 ... 500						10	-...E	
Piston rod thread extension	None									
	[mm]	1 ... 35		1 ... 70				10	-...L	

- 6** **R3** Not with A2
- 7** **T1, T3, T4** Not with P2, A1, A2, A3, EX4
- 8** **P2** Not with N3, A1, A2, A3, EX4
Only for strokes 10 ... 500 mm
- 9** **EX4** Not with T1, T3, T4, P2, A1, A3
- 10** **...E, ...L** Only up to strokes of 2,000 mm

 - Note
The piston rod extension for the bellows is automatically taken into consideration when feature P2 is selected. This means that there is no need to specify a value for the feature ...E.

 - Note
When selecting the feature ...E in combination with feature P2, the part of the piston rod extension ...E is not covered by the bellows.

 - Note
When feature P2 is selected in combination with feature T (through piston rod), the bellows is mounted on one side only.

- 1) Corrosion resistance class 2 according to Festo standard 940 070
 Components subject to moderate corrosion stress. Externally visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment or media such as coolants or lubricating agents.
 Corrosion resistance class 4 according to Festo standard 940 070
 Components subject to very high corrosion stress. Parts used with aggressive media, e.g. in the food or chemical industry. These applications should be supported with special tests with the media if required.
- 2) ATEX-compliant

- 1) Corrosion resistance class 2 according to Festo standard 940 070
 Components subject to moderate corrosion stress. Externally visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment or media such as coolants or lubricating agents.
 Corrosion resistance class 4 according to Festo standard 940 070
 Components subject to very high corrosion stress. Parts used with aggressive media, e.g. in the food or chemical industry. These applications should be supported with special tests with the media if required.
- 2) ATEX-compliant

Standard cylinders DSBC, to ISO 15552

Accessories

Travel speed v as a function of tubing length l

The bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air must be ducted via a pressure compensation hole in the connection

part **1**. The pressure generated in the protective bellows kit by the positioning motion is primarily defined by the travel

speed and tubing length. The recommended tubing length based on the travel speed of the drive can be read from the graph.

Advance

Return

 Note
The push-in fittings opposite must be used for the pressure compensation hole.
Silencers can be used as an alternative. This reduces the travel speed slightly.

1) The dimension corresponds to the E value (piston rod extension) of the drive

Standard cylinders DSBC, to ISO 15552

Accessories

Ordering data – Protective bellows kit

An extended piston rod (order code E) is required when using a protective bellows kit → Ordering data – Modular products.

The necessary dimension for order code E as a function of piston diameter and cylinder stroke as well as the corresponding protective bellows kit is indicated in the table below:

Order example:

Selected standard cylinder:

DSBC-32-320-PPV-A-...

The dimension for the corresponding E value (see table):
112 mm

Complete type code for standard cylinder:

DSBC-32-320-PPV-A-...-112E

The corresponding protective bellows kit:

DADB-V6-32-S301-350

 **Note**
The maximum overall stroke length must not be exceeded when combining cylinders and multi-position kits.

1) ATEX-compliant

Connecting two cylinders with identical piston \varnothing as a 3 or 4-position cylinder

A 3 or 4-position cylinder consists of two separate cylinders whose piston rods advance in opposing directions.

This means that depending on actuation and stroke division, this type of cylinder can assume up to four positions.

In each case the cylinder is driven precisely against a stop. Note that when one end of the piston rod is

fixed, the cylinder barrel executes the movement. The cylinder's connections must be flexible.

To achieve 3 positions

Two cylinders with identical stroke length must be connected together.

To achieve 4 positions

Two cylinders with different stroke lengths must be connected together.

Standard cylinders DSBC, to ISO 15552

Accessories

Mounting kit DAVM

For lateral valve assembly, directly on the drive

Materials:
Mounting bracket, screws: Galvanised steel
Slot nut: High-alloy stainless steel

Example:

The hole pattern on the angle bracket enables solenoid valves to be attached on the right according to the assignment. The following table includes a few solenoid valves that are available.

Allocation table, mounting kit for solenoid valves

Accessories

Ordering data – Position transmitters for T-slot					Technical data → Internet: smat	
	Type of mounting	Electrical connection, connection direction	Analogue output [V]	Cable length [m]	Part No.	Type
	Insertable in slot from above	Plug M8x1, 4-pin, in-line	0 ... 10	0.3	553744	SMAT-8M-U-E-0,3-M8D

Note		
Function : The position transmitter continuously senses the position of the piston. It has an analogue output with an output signal in proportion to the piston position.	Measuring range: The position transmitter supplies an analogue output signal of 0 ... 10 V in the position measuring range of up to 40 mm.	Information: Additional information can be found online → smat
