

Terminal box

Features

- ATEX certification
- BASEEFA test certification
- Versions with horizontally, vertically or diagonally mounted terminal strip
- Different terminal types can be mounted
- External earth connection
- Extended ambient temperature range
- Possibility of an M 20/M 25 cable entry in the lid
- Integrated earthing pad for metal glands

Description

The OTB terminal box, both distribution box and empty enclosure, is manufactured of high impact resistance proof, glass-fibre reinforced polyester SMC & DMC providing extraordinary stability and corrosion resistance.

The standard enclosure consists of black, anti-static material. OTB distribution box and empty enclosure have been tested and approved by the BASEEFA authorities according to the latest European Standards. These correspond to the requirements of the EC directive 94/9/EC (ATEX).

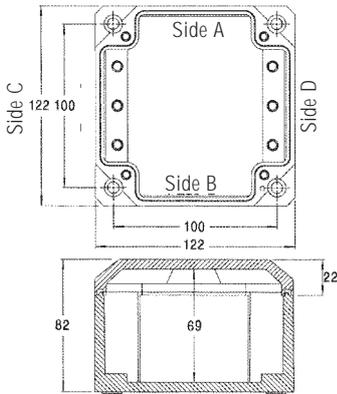

Installation instructions

The installer must make sure that the enclosure used is suitable for the corresponding field of application. This means that the marking must correspond to the classification of the Ex area. Also must the temperature class of the distribution box meet the respective requirements.

- A maximum of 2 earthing bars type QS3 may be fitted.
- Alternative terminal types are available.

The maximum number of terminals listed above depends on the maximum conductor size and maximum current. At least one earth terminal must be connected.
The enclosure can be mounted with the terminal strip horizontally or vertically aligned or equipped with a single diagonally mounted terminal strip.

Standard entry arrangements

Thread size	Side	Max. entries per side	Position of holes	Notes
M 20	A+B	1	1M	
		2	2M, 3M	Locknuts max. 27 mm A/C
