

Type 4763 Electropneumatic Positioner

Type 4765 Pneumatic Positioner

SAMSON

Application

Single-acting positioners for attachment to pneumatic control valves. These positioners use an electric input signal from 0/4 to 20 mA or 1 to 5 mA (Type 4763) or a pneumatic input signal from 0.2 to 1 bar (3 to 15 psi) (Type 4765).

Rated travels from 7.5 to 90 mm

CE Ex
certified

The positioners ensure a predetermined assignment of the valve position (controlled variable x) to the input signal (reference variable w). They compare the input signal received from a control system to the travel of the control valve and issue a corresponding output signal pressure p_{st} (output variable y).

Special features

- Compact, low-maintenance design
- Any mounting position possible
- Insusceptible to mechanical vibrations
- Reversible direction of action
- Excellent dynamic behavior
- Suitable for normal or split-range operation
- Adjustable proportional band (P-band)
- Adjustable air output capacity
- Low air consumption

Attachment to valves with cast yokes or rod-type yokes according to IEC 60534-6

Optionally available with two pressure gauges to monitor supply air and signal pressure. Stainless steel pressure gauge housing with connections either nickel-plated or made of stainless steel.

A Type 4765 Pneumatic Positioner can be upgraded to a Type 4732 Electropneumatic Positioner. ¹⁾

Versions

Type 4763-0 (Fig. 1) · Electropneumatic positioner, without explosion protection

Type 4763-1 · Electropneumatic positioner for hazardous areas

Input circuit  II 2G Ex ia IIC T6 Gb according to ATEX

Type 4763-8 · Electropneumatic positioner in in Ex nA (non-sparking)

Type 4765/6116 (Fig. 3) · Electropneumatic positioner with type of protection "Flameproof enclosure" Ex d with Type 6116 i/p Converter (Fig. 2; see ► T 6116 for explosion protection certificates)

Type 4765 (Fig. 1) · Pneumatic positioner with 0.2 to 1 bar (3 to 15 psi) reference variable

¹⁾ Does not apply to the version for oxygen (Type 4765)

Fig. 2: Type 6116 i/p Converter, opened housing

Fig. 3: Type 4765/6116 Ex d Positioner
Attachment to NAMUR rib

Principle of operation

The only difference between the Type 4765 Pneumatic Positioner and the Type 4763 Electropneumatic Positioner is the electropneumatic (i/p) converter unit in the electropneumatic positioner to convert the electric signal from the controller into a proportional pneumatic signal.

The positioners use a flapper-nozzle system which operates according to the force-balance principle. They can be applied for both normal and split-range operation.

Direction of action

When the reference variable increases, the signal pressure can be selected to be increasing/increasing (direct action >>) or increasing/decreasing (reverse action <>). The direction of action depends on the position of the nozzle assembly that can be turned by 180°. The visible marking (>> or <>) indicates which direction of action is effective. On changing the direction of action or the fail-safe position, note that the positioner must also be mounted in a different position (Fig. 5 to Fig. 8).

Attachment according to IEC 60534-6 and NAMUR

The various ways in which the positioner can be attached to the actuator meet the requirements of IEC 60534-6 and NAMUR recommendation. Positioners may be attached to valves with either cast yokes (e.g. SAMSON Series 240) or rod-type yokes.

Each type of attachment requires special mounting parts.

Assignment of the positioner and the actuator

Fig. 5 to Fig. 8 schematically illustrate the arrangement of the actuator, mounting position of the positioner, reference variable, and direction of action.

Fail-safe position

The Type 3271 and Type 3277 Pneumatic Actuators are available with the following fail-safe actions which become effective when the pressure is relieved from the diaphragm or the air supply fails:

Actuator stem extends (Fig. 5/Fig. 6)

The compression springs in the actuator force the actuator stem to extend when the pressure acting on the diaphragm decreases or upon air supply failure.

Actuator stem retracts (Fig. 7/Fig. 8)

The compression springs in the actuator force the actuator stem to retract when the pressure acting on the diaphragm decreases or upon air supply failure.

Refer to Data Sheets ► T 8310-1 and ► T 8310-2 for more details.

Fig. 5 to Fig. 8 illustrate the different directions of action and the mounting positions of the positioner. Right and left attachment apply when looking onto the lever (1) and plate (2).

Table 1: Technical data · Type 4765 Pneumatic Positioner

Type 4765	
Controlled variable (travel range)	7.5 to 60 mm, With lever extension: 7.5 to 90 mm
Reference variable	0.2 to 1 bar (3 to 15 psi)
Split-range 0 to 50 % or 50 to 100 % reference variable span (up to 50 mm travel)	0.2 to 0.6 bar (3 to 9 psi) and 0.6 to 1 bar (9 to 15 psi)
Range spring	See Table 3 on page 5 for selection
Supply air	Supply air: 1.4 to 6 bar (20 to 90 psi) Air quality acc. to ISO 8573-1: Max. particle size and density: Class 4 Oil content: Class 3 · Pressure dew point: Class 3
Signal pressure p_s (output)	Max. 0 to 6.0 bar (0 to 90 psi)
Characteristic	Linear characteristic Deviation from characteristic according to terminal point method ≤ 1.5 %
Hysteresis	< 0.5 %
Sensitivity	< 0.1 %
Direction of action	Reversible
Proportional band X_p (at 1.4 bar supply air)	1 to 3.0 % with spring 1 1 to 2.0 % with spring 2 1 to 1.5 % with spring 3
Air consumption in steady state, $X_p = 1$ %	With 1.4 bar supply air: $0.13 \text{ m}_n^3/\text{h}$ With 6 bar supply air: $0.33 \text{ m}_n^3/\text{h}$
Air output	At Δp 1.4 bar: $3.0 \text{ m}_n^3/\text{h}$ At Δp 6 bar: $8.5 \text{ m}_n^3/\text{h}$
Transit time with Type 3271 Actuator, "stem extends"	$240 \text{ cm}^2 \leq 1.8 \text{ s}$ $350 \text{ cm}^2 \leq 2.5 \text{ s}$ $700 \text{ cm}^2 \leq 10 \text{ s}$
Permissible ambient temperature ^{1), 2)}	-20 to $+80$ °C
Influences	Temperature: < 0.02 %/1 K Supply air: < 0.20 %/0.1 bar Variable position when turned by 180° : < 3.50 %
Degree of protection	IP 54 · Venting over check valve (1790-7408): IP 65
Compliance	CE
Weight	Approx. 1.1 kg
Materials	Housing: die-cast aluminum, chromated, and plastic coated External parts: stainless steel

¹⁾ Extended temperature range on request

²⁾ With special version suitable for oxygen up to maximum $+60$ °C

Table 2: Technical data · Type 4763 Electropneumatic Positioner

Type 4763	
Controlled variable (travel range)	7.5 to 60 mm, with lever extension: 7.5 to 90 mm
Reference variable ¹⁾ Split-range 0 to 50 % or 50 to 100 % reference variable span (up to 50 mm travel)	4 to 20 mA (Ex), 4 to 20 mA (without explosion protection), 0 to 20 mA, 1 to 5 mA, $R_i = 250 \Omega$ ²⁾ $R_i = 200 \Omega$ ²⁾ $R_i = 200 \Omega$ ²⁾ $R_i = 880 \Omega$ ²⁾
Range spring	See Table 3 on page 5 for selection

or

Type 4765-01... Pneumatic Positioner

Additional specifications

- Without/with pressure gauges
- CrNiMo steel pressure gauge housing, connection nickel-plated or completely of CrNiMo steel for mounting onto control valve
- Reference variable adjusted ... or supply pressure ... bar
- Direction of action: increasing/increasing or increasing/decreasing
- Piping: Zinc-coated steel or completely of CrNiMo steel or natural PE tubing DN 6/10
- Attachment according to IEC 60534-6 (NAMUR)
Travel: ... mm, if applicable, rod diameter: ...mm
Optionally, special version
- Extended temperature range

Refer to the following mounting and operating instructions concerning the mounting parts required when the positioner is delivered separately and not mounted onto a control valve:

- Type 4765: ► EB 8359-1
- Type 4763: ► EB 8359-2
