

DESCRIPTION

The ADT 901 Low Pressure Test Pump is a hand operated pressure pump designed to generate either vacuum to -6 psi (-0.4 bar) or pressures to 6 psi (0.4 bar). A high-quality screw press is designed for fine pressure adjustment, with adjusting resolution up to 0.01 Pa (0.0001 mbar). To reach the pressure stability as high as possible during the micro-pressure calibration, an isothermal bellows chamber is designed for reducing the possible heat effects such as environmental temperature change. Without non-returning valve that is usually used in "trouble-maker" hand pump, ADT 901 has minimal maintenance required. Two finger-tight connectors installed on the pump allow the user using fingers to connect and disconnect the reference gauge and devices under test quickly and easily without the need for PTFE tape or wrenches. The ADT 901 is an ideal comparison test pump for low pressure application.
