

## **Characteristics:**

### General Description:

The single channel DIN-Rail RS 422 / RS 485 Fieldbus Isolating Repeater D1061S is used to separate Intrinsically Safe RS 422 / RS 485 equipment located in Hazardous Area from a RS 232 / RS 422 / RS 485 controller located in Safe Area.

Transmission speed is dip-switch adjustable from 1.2 Kbit/s up to 1.5 Mbit/s. Terminating impedance is dip-switch selectable inside the unit (250  $\Omega$  value) for both sides of communication lines (Hazardous Area and Safe Area side). RS422 / RS 485 connection in Safe Area is provided both on terminal block and DB9 female connector on the unit.

RS232 connection is provided on DB9 female connector.

The module also provides a shield terminal block for connecting cable on Hazardous Area side.

#### **Function:**

1 channel I.S. RS 422 / RS 485 isolating repeater, provides 3 port isolation (input/output/supply).

## **Signalling LEDs:**

Power supply indication (green), Rx-Tx transmission (yellow).

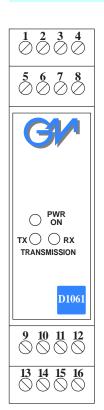

#### Field Configurability:

Hardware is totally configurable via dip-switches; parameters are: Transmission speed adjustable from 1.2 Kbit/s up to 1.5 Mbit/s. Terminating impedance enabled or disabled in both communication lines. RS422 / RS 485 connection selection from Terminal Block or DB9 female connector.

#### EMC:

Fully compliant with CE marking applicable requirements.
