

BT-Burgmann Mechanical Seals

BT-Burgmann in profile

BT-Burgmann S.p.A. was founded in 1966 to satisfy the requirements for mechanical seals of Italian pumps manufacturers.

The company has grown continuously and actually produces more than 8 million mechanical seals a year with around 70 employees. The parent company BT-Burgmann S.p.A. offers technical and commercial services while BT Tenute Meccaniche Rotanti S.p.A. is the groups production facility.

In 1998 BT joined the EagleBurgmann group. Initially structured as a small family owned company with a national market, BT-Burgmann has developed into a modern company oriented towards a global market with export sales of more than 45 % of the turnover. The company has two production plants (total area 5.400 square meters) in the industrial area of Arcugnano (Vicenza). BT-Burgmann is market leader for mass production mechanical seals in clean water applications. Our seals are regularly used in many applications such as:

- Hot water and water pumps
- Swimming pool pumps
- Massage pumps in whirlpools
- Pumps for garden and ponds
- Submersible pumps
- Submersible well motors
- Waste water pumps
- Circulation pumps
- Pumps for dishwashers
- Shower pumps
- Building service systems
- Coffee machines

In addition, the BT-Burgmann range of products also embraces seals for light chemicals and food industry applications, for abrasive media and for pressures up to 40 bar.

The most valuable customers of BT-Burgmann are the largest European water pump manufacturers and many other well known worldwide pump producers.

BT-Burgmann SPA

Quality

Production

BT-Burgmann is a certified company having highly qualified technical personnel and the most advanced equipments for research, production and control in accordance with the highest international standards.

Our certifications are:

- UNI EN ISO 9001 Quality Management System
- UNI EN ISO 14001 Environment Management System
- OHSAS 18001 Health and Safety Management System
- Conformity declaration of hygiene for water for human use (TIFQ Italian Institute – DM 174/04)

Test rig

Automation

Large investments into production processes and complete automation of many manufacturing phases allow to achieve the combined target of reasonable prices and high quality products.

Testing facilities

Different test rigs for life-tests and special equipments for submersible pumps ensure quality control as well as continuous development of new products. It's also possible to test specific customer solutions.

Research and development

A staff of qualified technicians is permanently employed developing innovative solutions. BT-Burgmann R&D and Lab departments are working with excellent equipments and advanced technologies:

- Flatness analysis system
- Thermal analysis equipment (research on rubber and carbon)
- Scanning electron microscope with EDX probe (material composition analysis)
- FT-IR spectrometer (organic chemical analysis)

Scanning electron microscope

BT Tenute Meccaniche Rotanti SPA

Type BT-AR

BT-AR

- Rubber bellows mechanical seal
- Unbalanced
- Single spring
- Independent of direction of rotation

BT-AR

Mechanical seal for large series cold water pumps, produced in millions of units per year. The BT-AR owes its success to the wide range of application, the short axial stuffing box (this allows to build the pump more economically, saving material) and to the best ratio quality/price. The elasticity of the bellows design permits to accept a more robust operation. The BT-AR seal materials are also available with the following approval specifications: KTW, W270, ACS, WRAS, NSF, DM174 (TIFQ) and FDA.

Multiple Seal

The BT-AR can also be used as a multiple seal in tandem or back-to-back arrangement when the product media cannot assure the lubrication or for sealing media with a higher content of solids. Installation proposals can be supplied on request.

Ideal mechanical seal for the following applications:

- Domestic and garden pumps
- Whirlpool and swimming pool pumps
- Dishwasher pumps
- Submersible motors / pumps
- Water pumps

Operating range

d_1 =	6 ... 60 mm
p_1 =	6 bar
t =	-20 ... 140 °C
v_g =	10 m/s

Operating limits depend on $p \cdot v_g$ factor

BT-AR3

Seal faces with brazed tungsten carbide (U) for abrasive media. Elastomers and diameter range same as BT-AR.

The BT-AR3 is the right choice when the seal has to be used in high duty applications or where the seal faces could be damaged by abrasives (waste water).

Type BT-A2

BT-A2

- Rubber bellows mechanical seal
- Unbalanced
- Single spring
- Independent of direction of rotation

BT-A2

Stationary mechanical seal in inch dimensions. Worldwide spread, this type of mechanical seal has reached an unsurpassed quality level. The BT-A2 features all carbon or high quality resin impregnated carbon, aluminium oxide 96 %, stationary with rubber bellows glued on collar. Static air pressure test on 100 % production. Excellent solution for swimming pool pumps. The BT-A2 is suitable for circulation massage pumps for whirlpools and clean water pumps.

Type BT-ARP

BT-ARP

- Rubber bellows mechanical seal
- Independent of direction of rotation
- Single spring, product protected

BT-ARP

BT-ARP mechanical seals are the ideal solution for media which are containing solids or are highly viscous. The spring is product protected, thus no sticking or clogging occurs. Reliable for a rugged operation in all kind of applications e.g. waste water treatment. Diameters and installations lengths available on request.

5b	Collar

Type BT-PN/-PNL

BT-PN/-PNL

- Rubber bellows mechanical seals
- Unbalanced
- Single spring
- Independent of direction of rotation

BT-PN

The BT-PN is a mechanical seal for large series with a simple but effective design, easy to assemble. The special spring arrangement allows a short axial installation length. This advantage is combined with an increased working pressure capability up to 12 bar, the spring is free from torque transmission. The BT-PN seal materials are also available with following approval specifications: KTW, W270, ACS, WRAS, NSF, FDA and DM174 (TIFQ).

Multiple seal

The BT-PN and BT-PNL can also be used as a multiple seal in tandem or back-to-back arrangement. This is advisable when the product media cannot assure lubrication or the content of solids is too high. Installation proposals can be supplied on request.

Materials

BT-PN

Seal face A, B, Q1, Q6
Stationary seat V, X, Q1, Q2, Q6
Rubber parts P, V, E, E2, P2
Construction materials F, G
Standard combination BVPFF

BT-PNL

Seal face A, B, Q1, Q6
Stationary seat V, X, Q1, Q2, Q6
Rubber parts P, V, E, E2, P2
Construction materials F, G
Standard combination BVPFF

BT-PNL

The small outer diameter of the BT-PNL allows its installation in small stuffing box chambers. Easy to assemble, the BT-PNL grants a long service life due to the good product turbulence and to the torque transmitted by rubber bellows. The BT-PNL seal materials are also available with the following approval specifications: KTW, W270, ACS, WRAS, NSF, FDA and DM 174 (TIFQ). Suitable for cold water pumps, submersible pumps and well water pumps.

Operating range

BT-PN

d_1^* = 8 ... 30 mm
 p_1 = 12 bar
 t = -20 ... 120 °C
 v_g = 10 m/s
Operating limits depend on $p \cdot v_g$ factor
* Other diameters on request

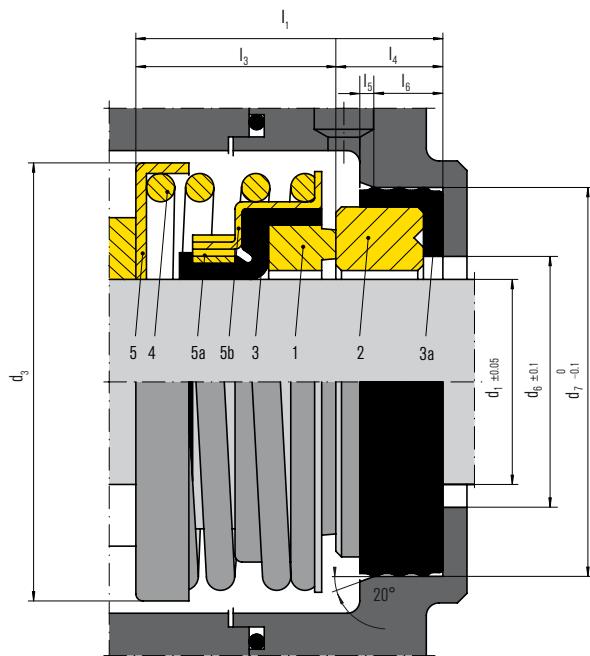

BT-PNL

d_1^* = 10 ... 40 mm
 p_1 = 12 bar
 t = -20 ... 120 °C
 v_g = 10 m/s
Operating limits depend on $p \cdot v_g$ factor
* Other diameters on request

Ideal for the following applications:

- Submersible oil filled motors (4" / 6")
- Submersible pumps, back-to-back installation
- Peripheral pumps for industrial applications
- Domestic and garden pumps
- Coffee machines
- Shower pumps

Type BT-FN/FN.NU

BT-FN/FN.NU

- Single pusher type seal
- Unbalanced
- Conical spring
- Dependent on direction of rotation

BT-FN

The BT-FN combines a spring loaded ceramic face with the tradition of pusher mechanical seals. The competitive price and the wide range of applications have made the BT-FN a successful seal. Recommended for centrifugal pumps, clean water pumps, pumps for domestic applications and gardening.

The BT-FN is produced with punched metal parts that allow to have an economical design. For the heaviest applications BT-FH is recommended where the metal parts are machined.

The BT-FN mechanical seal is also the ideal solution for light chemicals media applications. To ensure best and reliable performances, sliding faces of hard materials and proper elastomeric O-rings are the recommended material combination.

The BT-FN seal materials are also available with following approval specifications: KTW, W270, ACS, WRAS, NSF, FDA and DM174 (TIFQ).

BT-FN.NU

As BT-FN but with length l_{IN} and dimensions according to EN 12756.

Type BT-FH

BT-FH

- Single pusher type seal
- Unbalanced
- Conical spring
- Dependent on direction of rotation

BT-FH

The BT-FH is produced for the demanding applications. BT-FH is recommended where operating conditions in the pump require machined metal parts for the mechanical seal. The seals are available in the full range of diameters between 10 and 100 mm and especially in the most standard diameters for chemical applications as 12; 14; 16; 24; 28; 33; 43; 53 mm.

Materials

BT-FH

Seal face V, U1, B, Q1
Stationary seat B, U1, Q1, V
Rubber parts P, V, E, E2, P2
Construction material G
Standard combination VBVGG

BT-FH6

As BT-FH but with PTFE secondary seal elements instead of elastomers. Mainly used in the chemical industry and for corrosive media.

BT-FHC

As BT-FH but with shorter installation length.
(see l_{3c} in the dimension table)

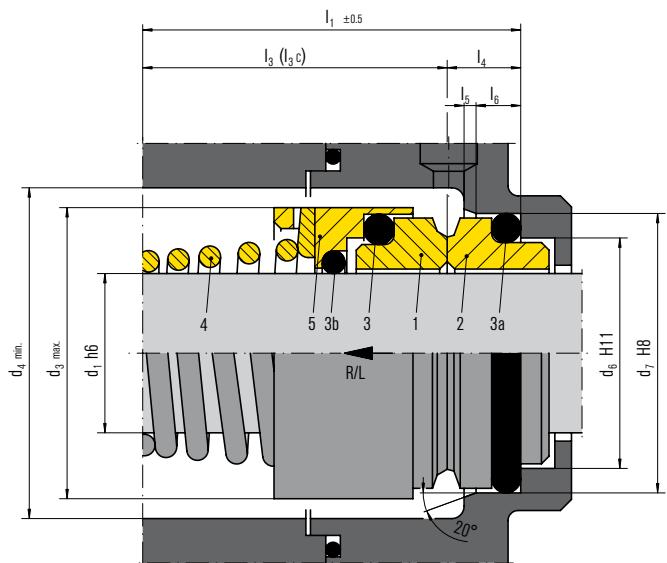

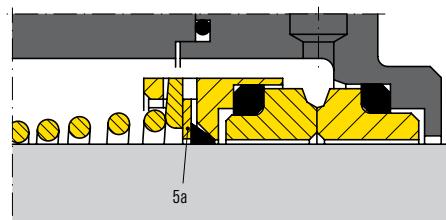

BT-FH seal materials are also available with following approval specifications: KTW, W270, ACS, WRAS, NSF, FDA and DM174 (TIFQ)

Operating range

$d_1 = 10 \dots 100 \text{ mm}$
 $p_1 = 10 \text{ bar}$
 $t = -70 \dots 200 \text{ }^\circ\text{C}$
 $v_g = 20 \text{ m/s}$
Operating limits depend on p-v_g factor

BT-FHC

Seal face V, U1, B, Q1
Stationary seat B, U1, Q1, V
Rubber parts V, E, P, E2, P2
Construction material G
Standard combination VBVGG

Type BT-RN/RN.NU

BT-RN/-RN.NU

- Single pusher type seal
- Unbalanced
- Conical spring
- Dependent on direction of rotation

BT-RN

BT-RN represents the traditional pusher seal. This type of mechanical seal is easy to install, covers a wide range of applications and its reliability is proven by millions of units worldwide in operation. This is a convenient solution for the widest range of applications: for clean water as well as chemical media. Can be also supplied with certification according DM174 (TIFQ).

BT-RN3

Seal faces made of brazed tungsten carbide which is suitable for media with intermediate corrosive and abrasive characteristics.

BT-RN6

Variant of BT-RN with secondary seal elements in PTFE. This allows application for a wide range of media.

Materials

BT-RN/-RN.NU

Seal face F, G, F1
Stationary seat B
Rubber parts P, V, E
Construction materials G, F
Standard combination F1BPGF1

BT-RN3/-RN3.NU

Seal face U
Stationary seat U
Rubber parts P, V, E
Construction materials G, F, F1
Standard combination UUPGF

BT-RN6/-RN6.NU

Seal face G
Stationary seat B
Rubber parts T
Construction material G
Standard combination GBTGG

Operating range

d_1	=	6 ... 110 mm (RN, RN3, RN6)
		10 ... 100 mm (RN.NU, RN3.NU)
		on request (RN6.NU)
p_1	=	10 bar
t	=	-70 ... 200 °C
v_g	=	20 m/s
Operating limits depend on $p \cdot v_g$ factor

Type BT-RN.NB

BT-RN.NB

- Single pusher type seal
- Balanced
- Conical spring
- Dependent on direction of rotation

BT-RN.NB

Represents like the BT-RN, the traditional pusher seal. Special feature of the BT-RN.NB is the balanced design for higher pressure range and clean water. Length and dimensions according to EN 12756.

Materials

BT-RN.NB

Seal face F, F1, G
Stationary seat B
Rubber parts P, E, V
Construction materials G, F, F1
Standard combination F1BPGF1

BT-RN3.NB

Seal faces made of brazed tungsten carbide which is suitable for media with intermediate corrosive and abrasive characteristics.

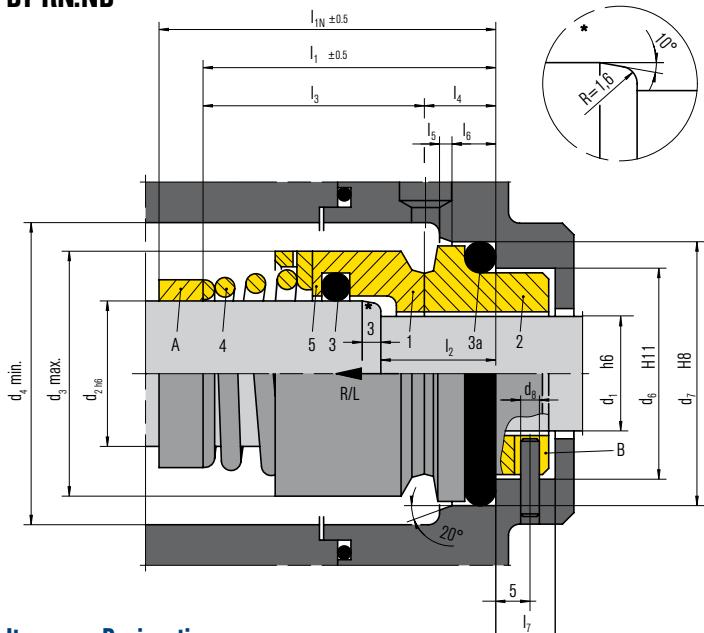

Operating range

$d_1 = 10 \dots 100 \text{ mm}$
 $p_1 = 40 \text{ bar}$
 $t = -20 \dots 180^\circ\text{C}$
 $v_g = 20 \text{ m/s}$
Operating limits depend on $p \cdot v_g$ factor

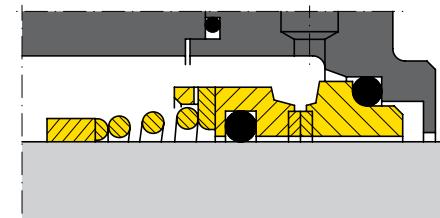

BT-RN3.NB

Seal face U
Stationary seat U
Rubber parts P, E, V
Construction materials G, F, F1
Standard combination UUPGF

Dimensions and length l_{1N} according to EN 12756

Type BT-C5

BT-C5

- Single pusher type seal
- Unbalanced (KU)
- Balanced (KB)
- Multiple springs
- Independent of direction of rotation

BT-C5.KU

The BT-C5.KU is available in many material combinations, and has therefore various application possibilities, especially in chemical applications. Torque transmission by set screws. Length according to EN12756.

Materials

BT-C5.KU(KB)

Seal face B2
Stationary seat V, Q1
Rubber parts P, V, E
Construction material G
Standard combination B2VPGG

BT-C5.KB

The balanced version of the BT-C5.KU. Suitable for a higher pressure range. Length according to EN 12756.

BT-C56.KU(KB)

Secondary seal elements in PTFE instead of elastomers.

Operating range

d_1	= 20 ... 100 mm (C5.KU/KB) on request (C56.KU/KB)
p_1	= 12 bar (C5/C56.KU) 40 bar (C5/C56.KB)
t	= -70 ... 200 °C
v_g	= 20 m/s
Operating limits depend on $p \cdot v_g$ factor	

Item	Designation

5c	Locking ring
B	Stationary seat with slot for radial pin (on request)

Type BT-C5E

BT-C5E

- Single pusher type seal
- Multiple springs
- Independent of direction of rotation
- External mounting
- For high viscosity media

BT-C5E

The BT-C5E is designed for external mounting, it has a short installation length. The seal mounted outside of the product has the advantage that all the metal parts, including springs, are not in contact with the media. Torque transmission by robust axial notches on the metal collar. The collar is fixed on the shaft with set screws. Typical applications are volumetric lobe pumps for food, cosmetics and pharma and for sticky and high viscous media (e.g. paste, paints).

Materials

BT-C5E

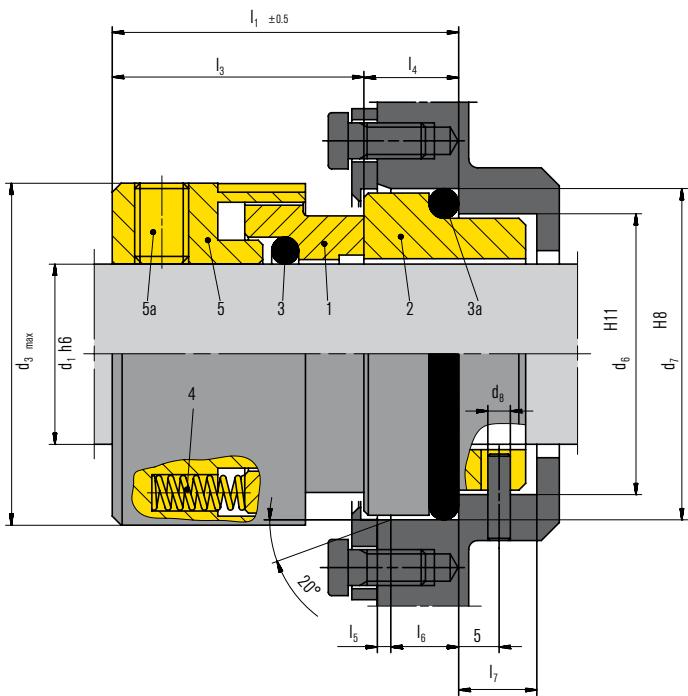

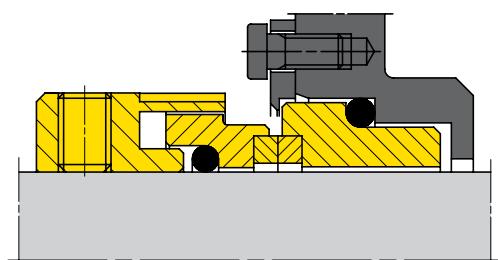

Seal face B2, Y
Stationary seat V, Q1, G
Rubber parts P, V, E
Construction material G
Standard combination B2VPGG

BT-C53E

Seal faces made of brazed tungsten carbide. This version is suitable for media with abrasive characteristics. Installation dimensions same as BT-C5E.

Operating range

$d_1 = 20 \dots 80 \text{ mm}$
 $p_1 = 12 \text{ bar}$
 $t = -35 \dots 180^\circ\text{C}$
 $v_g = 15 \text{ m/s}$
Operating limits depend on $p \cdot v_g$ factor

Seat dimension (d_7) according to EN 12756

Face materials

Synthetic carbons

„Soft“ standard face material with best possible emergency running properties, but only suitable for media without any solid content.

- A Carbon graphite, antimony impregnated
- B Carbon graphite, resin impregnated
- B3 Carbon graphite without impregnation (full carbon)

Metals

In combination with carbon as a hard/soft combination: good emergency running properties for sealing clean/aggressive media, including food industry applications.

- E Cr-steel AISI 420 (1.4021; 1.4028)
- F1 CrNi-steel AISI 431 (1.4057)
- F CrNi-steel AISI 304 (1.4301)
- F CrNi-steel AISI 304L (1.4307)
- G CrNiMo-steel AISI 316 (1.4401)
- G CrNiMo-steel AISI 316L (1.4404)

Carbides

Special materials (highly wear resistant) for chemically aggressive and abrasive media, including high temperatures.

- U Tungsten carbide, Ni-binder, brazed (lower cost than solid version)
- U1 Tungsten carbide, Ni-binder, solid
- Q1 Silicon carbide, sintered pressureless (SiC)
- Q6 Silicon carbide, sintered pressureless with carbon (SiC-C)

Metal oxides (Ceramics)

Reasonably priced material with good chemical resistance, but limited resistance to temperature and thermal shock, only used in combination with a soft face material as a „hard/soft“ combination.

- X Steatite (Magnesium silicate Mg_2SiO_4)
- V Ceramic (Aluminium oxide 99,5 % Al_2O_3)
- V1 Ceramic (Aluminium oxide 96-98 % Al_2O_3)

Plastics

Soft face material, used mainly in chemical pumps. The medium must not contain any solid particles. PTFE is a typical face material for dish washing applications (low friction).

- Y PTFE glass fiber reinforced 25 %
- Y2 PTFE glass fiber reinforced 15 %

Secondary seal components

- P Nitrile-butadiene-rubber NBR, e.g. Perbunan®
- P2 Nitrile-butadiene-rubber NBR (drinking water approved)
- P4 Hydrogenated Nitrile-rubber (HNBR), e.g. Therban®
- P5 Nitrile-butadiene-rubber NBR (indicated for ozone applications)
- V Fluor carbon rubber FKM, e.g. Viton®
- E Ethylene-propylene-rubber EPDM
- E2 Ethylene-propylene-rubber EPDM (drinking water approved)
- T Polytetrafluoroethylene PTFE, e.g. Teflon®
- X Perfluorcarbon rubber FFKM, e.g. Kalrez®, Chemraz®

Secondary seals of PTFE are wedge-shaped on the shaft side and are ideally suited for sealing aggressive media.

Please ask for possible drinking water approvals (WRAS, KTW, W270, ACS, NSF, DM174).

Spring materials

- F CrNi-steel AISI 304 (1.4310)
- G CrNiMo-steel AISI 316 (1.4401)

Construction materials

- E Cr-steel AISI 420 (1.4021; 1.4028)
- F1 CrNi-steel AISI 431 (1.4057)
- F CrNi-steel AISI 304 (1.4301)
- F CrNi-steel AISI 304L (1.4307)
- G CrNiMo-steel AISI 316 (1.4401)
- G CrNiMo-steel AISI 316L (1.4404)

Classification and limits of use

The operating limits shown in the table below are to be considered as a maximum because they directly depend on the $p \cdot v_g$ factor. The $p \cdot v_g$ factor is a term used to define in practice the operating limit of the mechanical seals and is the product of the pressure of the medium to be sealed and the surface speed referred to the average diameter of the seal faces. All technical specifications are based on extensive tests and our many years of experience. The diversity of possible applications means, however, that they can serve only as guide values. We must be notified of the exact conditions of application before we can provide any recommendation for a specific case. Subject to change.

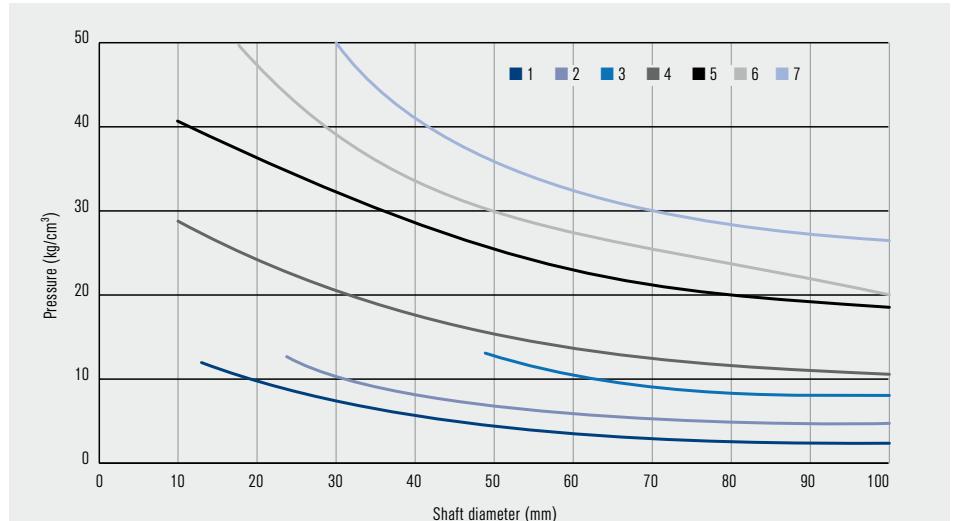

Temperature ranges for application of conventional O-rings

Materials	Temperature range (°C)
Nitrile rubber	P -20 ... +90
Chloroprene	N -30 ... +120
EP rubber not resistant to mineral greases and oils	E -40 ... +140
Silicone rubber	S -50 ... +200
Fluorine rubber (e.g. Viton®) with hot water only up to a maximum of 120 °C	V -30 ... +120
Butyl rubber not resistant to mineral greases and oils	B -40 ... +140
Perfluorcarbon rubber (e.g. Kalrez®)	X +270
Fluorine containing solvents may result in swelling	
PTFE (e.g. Teflon®)	Y -200 ... +250

Pressure limits

Face materials	n (g/min)	Medium	Form
1 Carbon/aluminium oxide	2950	water	U*
2 Carbon/tungsten carbide	2950	water	U*
3 Carbon/tungsten carbide	1450	lubricants	U*
4 Carbon/aluminium oxide	2950	water	B*
5 Carbon/tungsten carbide	2950	water	B*
6 Carbon/tungsten carbide	2950	lubricants	B*
7 Carbon/tungsten carbide	1450	lubricants	B*

U* – Unbalanced; B* – Balanced

Approximate p-v curves for generic mechanical seals, in water (or water solutions) and in other liquids, at temperature 20 °C.
