## CD-ROM for Catalog D 12 · 2012

In the CD-ROM that accompanies Catalog D 12 · 2012, you will find:

- Dimension drawings of the converters (PDF format)
- Dimensional drawings of our converters in PDF format  
[www.siemens.com/cadcreator](http://www.siemens.com/cadcreator)
- Catalog D 84.1 Three-phase Induction Motors H-compact, H-compact PLUS (PDF format)

### Hardware and software requirements:

- Intel Pentium 1 GHz or higher
- RAM, min. 512 Mbyte
- Screen resolution 1024 × 768 Pixel
- CD-ROM-drive, at least 16 x
- Windows XP/Vista
- Acrobat Reader 7.0 and higher
- MS Internet Explorer V6.0 (SP2)

### Start

Insert the CD-ROM into the CD-ROM drive.

The program starts automatically.

If the AutoRun function is not activated in your system, start file start.hta from the CD-ROM using the Windows Explorer.

### Note

Installation is not necessary to view the information on this CD-ROM. This does not apply, however, when using dimensional drawings in DXF format.

## Answers for industry.

Siemens Industry answers the challenges in the manufacturing and the process industry as well as in the building automation business. Our drive and automation solutions based on Totally Integrated Automation (TIA) and Totally Integrated Power (TIP) are employed in all kinds of industry. In the manufacturing and the process industry. In industrial as well as in functional buildings.

Siemens offers automation, drive, and low-voltage switching technology as well as industrial software from standard products up to entire industry solutions. The industry software enables our industry customers to optimize the entire value chain – from product design and development through manufacture and sales up to after-sales service. Our electrical and mechanical components offer integrated technologies for the entire drive train – from couplings to gear units, from motors to control and drive solutions for all engineering industries. Our technology platform TIP offers robust solutions for power distribution.

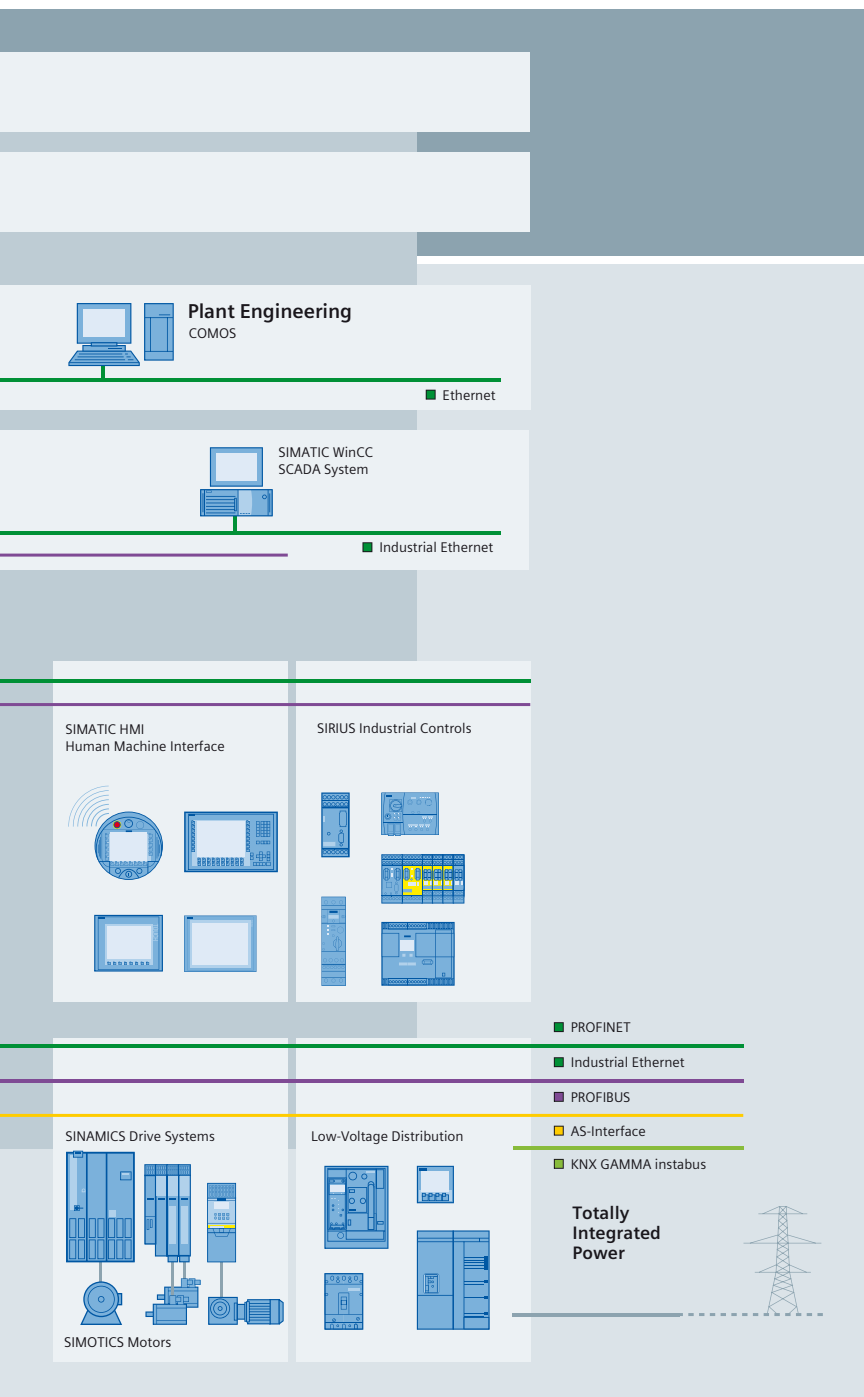

The high quality of our products sets industry-wide benchmarks. High environmental aims are part of our eco-management, and we implement these aims consistently. Right from product design, possible effects on the environment are examined. Hence many of our products and systems are RoHS compliant (Restriction of Hazardous Substances). As a matter of course, our production sites are certified according to DIN EN ISO 14001, but to us, environmental protection also means most efficient utilization of valuable resources. The best example are our energy-efficient drives with energy savings up to 60 %.

Check out the opportunities our automation and drive solutions provide. And discover how you can sustainably enhance your competitive edge with us.

# Setting standards in productivity and competitiveness.

**Totally Integrated Automation.**

## TIA is characterized by its unique continuity.

It provides maximum transparency at all levels with reduced interfacing requirements – covering the field level, production control level, up to the corporate management level. With TIA you also profit throughout the complete life cycle of your plant – starting with the initial planning steps through operation up to modernization, where we offer a high measure of investment security resulting from continuity in the further development of our products and from reducing the number of interfaces to a minimum.

## The unique continuity is already a defined characteristic at the development stage of our products and systems.

The result: maximum interoperability – covering the controller, HMI, drives, up to the process control system. This reduces the complexity of the automation solution in your plant. You will experience this, for example, in the engineering phase of the automation solution in the form of reduced time requirements and cost, or during operation using the continuous diagnostics facilities of Totally Integrated Automation for increasing the availability of your plant.

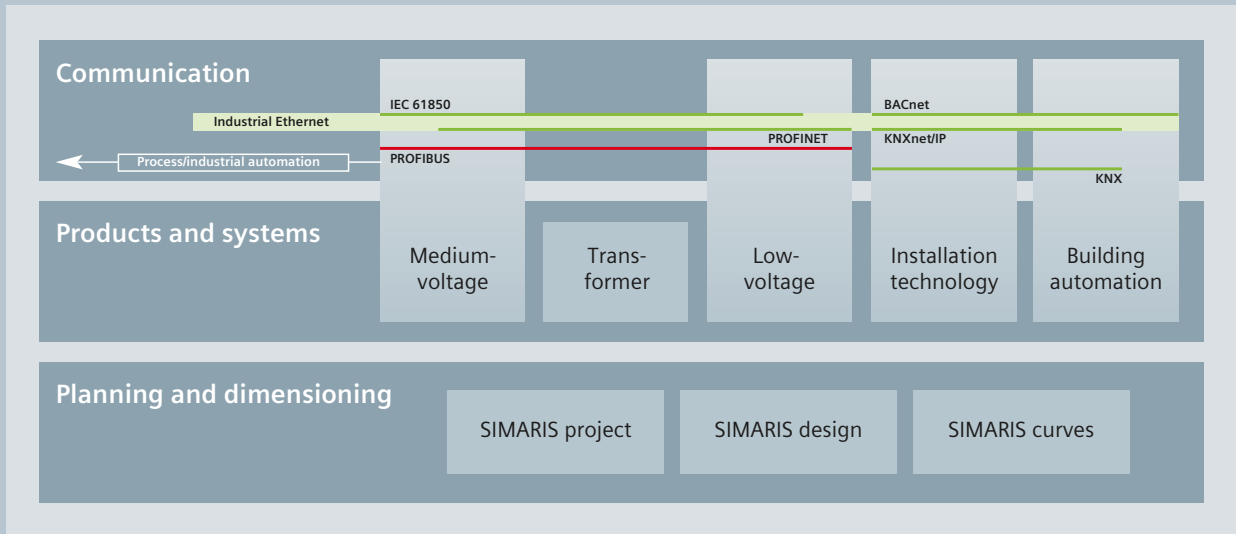

Thanks to Totally Integrated Automation, Siemens provides an integrated basis for the implementation of customized automation solutions – in all industries from inbound to outbound.

## Integrated power distribution from one source.

**Totally Integrated Power.**

Electrical power distribution requires integrated solutions. Our answer: Totally Integrated Power (TIP). This includes tools and support for planning and configuration and a complete, optimally harmonized product and system portfolio for integrated power distribution from medium-voltage switchgear right to socket outlets.

The power distribution products and systems can be interfaced to building or industrial automation systems (as part of Total Building Solutions or Totally Integrated Automation) via communication capable circuit breakers and modules, allowing the full potential for optimization that an integrated solution offers to be exploited throughout the product cycle – from planning right through to installation and operation.

Thanks to a comprehensive energy management system, power flows can be made transparent and the energy consumption of individual loads can be calculated and allocated. Building operators can thus identify power-intensive loads and implement effective optimization measures. With its products and systems, Totally Integrated Power forms the basis for this functionality and guarantees greater cost-efficiency in industrial applications, infrastructure and buildings.

Application areas of the SINAMICS drive family

#### Application

SINAMICS is the family of drives from Siemens designed for industrial machine and plant construction. SINAMICS offers solutions for all drive tasks:

- Simple pump and fan applications in the process industry
- Complex single-motor drives in centrifuges, presses, extruders, elevators, as well as conveyor and transport systems
- Drive line-ups in textile, plastic film, and paper machines, as well as in rolling mill plants
- High-precision servo drives for the manufacture of wind turbines
- Highly dynamic servo drives for machine tools, as well as packaging and printing machines

#### Product variants

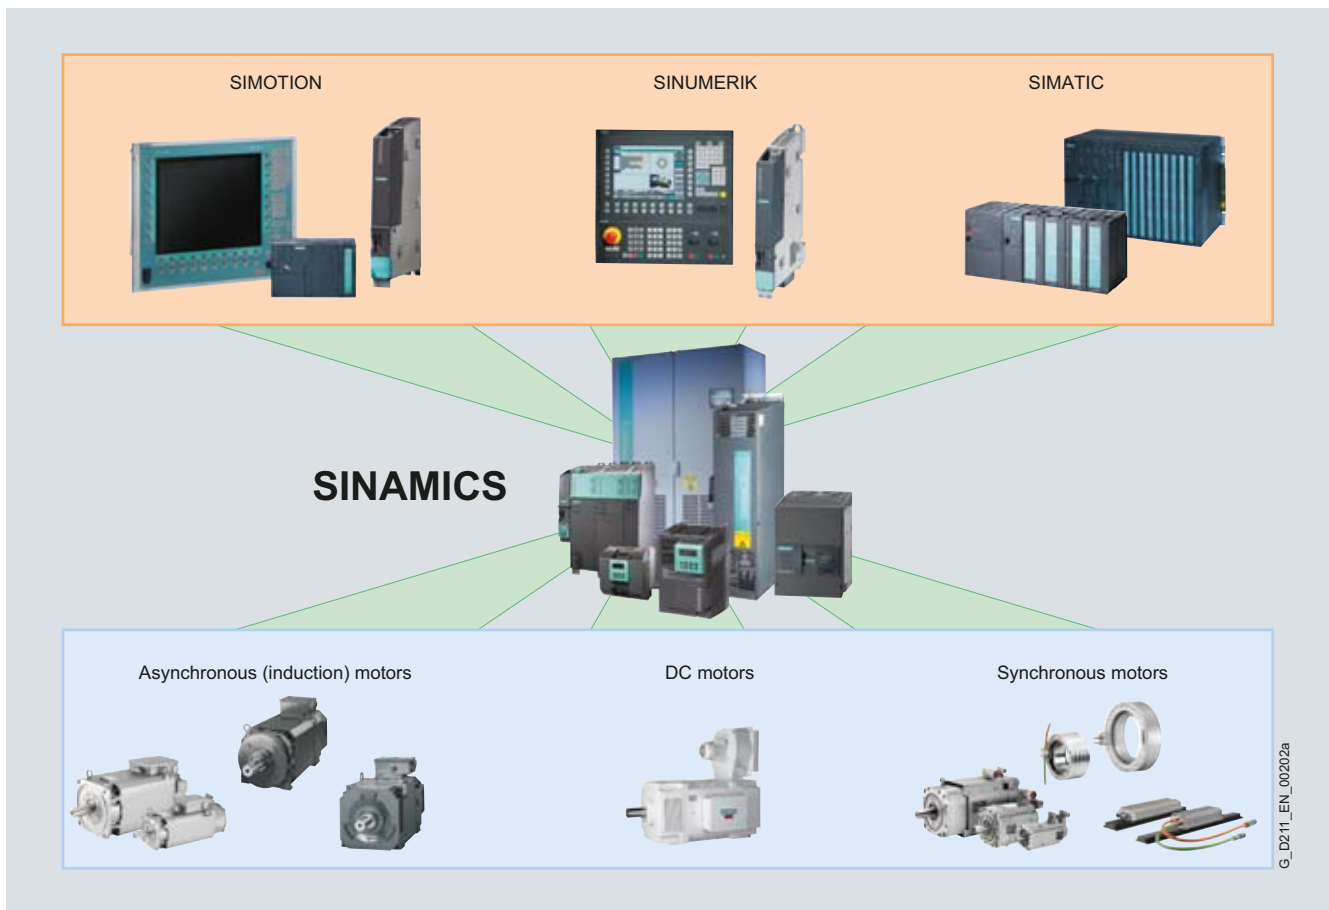

Depending on the application, the SINAMICS range offers the ideal variant for any drive task.

- SINAMICS G is designed for standard applications with induction motors. These applications have less stringent requirements regarding the dynamic performance of the motor speed.
- SINAMICS S handles demanding drive tasks with synchronous and induction motors and fulfills stringent requirements regarding
  - the dynamic performance and accuracy
  - integration of extensive technological functions in the drive control system.
- SINAMICS DCM is the DC drive belonging to the SINAMICS family. As a result of its expandability across the board, it addresses both basic as well as demanding applications in drive technology and in complementary markets.

#### Platform concept and Totally Integrated Automation

All SINAMICS versions are based on a platform concept. Common hardware and software components, as well as standardized tools for design, configuration and commissioning tasks, ensure high-level integration across all components. SINAMICS handles a wide variety of drive tasks without system gaps. The different SINAMICS versions can be easily combined with each other.

SINAMICS is part of the Siemens "Totally Integrated Automation" concept. Integrated SINAMICS systems covering engineering, data management and communication at the automation level, result in extremely cost-effective solutions based on SIMOTION, SINUMERIK and SIMATIC control systems.

G\_D211\_EN\_00202a

SINAMICS as part of the Siemens modular automation system

#### **Quality management according to DIN EN ISO 9001**

SINAMICS is able to meet the highest quality requirements. Comprehensive quality assurance measures in all development and production processes ensure a consistently high level of quality.

Of course, our quality management system is certified by an independent authority in accordance with EN ISO 9001.

#### System properties

The SINAMICS range is characterized by the following system properties:

- Standard functionality based on a single platform concept
- Standardized engineering
- High degree of flexibility and combination capability
- Broad power range
- Designed for global use
- SINAMICS Safety Integrated
- Higher efficiency and effectiveness
- High energy efficiency
- Versatile interfacing facilities to higher-level controllers
- Totally Integrated Automation

#### Application areas

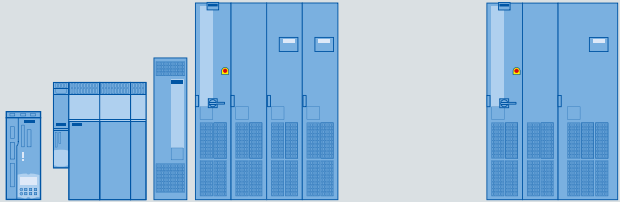

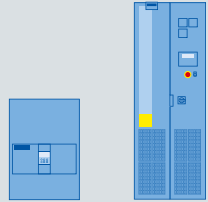

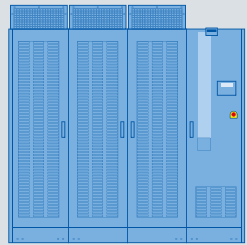

Tailored to suit different application areas, the SINAMICS range encompasses the following products:

##### AC low-voltage converters (line supply < 1000 V)

- **SINAMICS G110**  
- The versatile drive for low power ratings
- **SINAMICS G120P**  
- The specialist for pumps, fans, and compressors
- **SINAMICS G120**  
- The modular single-motor drive for low up to medium power ratings
- **SINAMICS G110D**  
- The distributed, compact single-motor drive in a high degree of protection for basic applications
- **SINAMICS G120D**  
- The distributed, modular single-motor drive in a high degree of protection for sophisticated applications
- **SINAMICS G130 and SINAMICS G150**  
- The universal drive solution for single-motor drives with a high power rating
- **SINAMICS S110**  
- The basic positioning drive for single-axis applications
- **SINAMICS S120**  
- The flexible, modular drive system for demanding drive tasks
- **SINAMICS S150**  
- The drive solution for demanding single-motor drives with a high power rating

## Overview

## SINAMICS G – The efficient drives

## SINAMICS G110D

*The distributed single drive for basic solutions*

## SINAMICS G120D

*The distributed single drive for high-performance solutions*

## SINAMICS G130, SINAMICS G150

*The universal drive solution for single drives with high output ratings*

## Main applications

Horizontal conveyor applications in industrial environments, main focus on distribution and logistics in airports; generally suitable for basic conveyor-related tasks with local control or connected to a bus via AS- Interface

Conveyor drive applications in industrial environments, main focus on the automotive industry; also suitable for high-performance applications e.g. at airports and in the food, beverage and tobacco industry (without surfactants)

Machines and plants in the process and production industry, water/waste, power stations, oil and gas, petrochemicals, chemical raw materials, paper, cement, stone, steel

## Application examples

- Conveyor systems
- Airports
- Distribution logistics

- Conveyor systems
- Electric monorail system in distribution logistics

- Pumps and fans
- Compressors
- Extruders and mixers
- Mills

## Highlights

- Low profile design with standard drilling dimensions (standard footprint) in IP65 degree of protection
- Simple and fast commissioning
- Versions with and without a maintenance switch
- Optional key-operated switch
- AS-Interface with bus parameterization
- Quick stop function
- Integrated brake control, 180 V DC
- Optimum interaction with SIMATIC and LOGO!

- Low profile design with standard drilling dimensions (standard footprint) in IP65 degree of protection
- Modular
- Can be flexibly expanded
- Simple and fast commissioning
- Regenerative feedback
- Optimum interaction with SIMOTION and SIMATIC

- Space-saving
- Low noise
- Simple and fast commissioning
- SINAMICS G130: Modular components
- SINAMICS G150: Ready-to-connect cabinet unit
- Optimum interaction with SIMATIC

#### Overview

##### SINAMICS S – The flexible drives

###### SINAMICS S110

*The specialist for simple positioning tasks*

###### SINAMICS S120

*The flexible, modular drive system for demanding drive tasks*

###### SINAMICS S150

*The drive solution for sophisticated single drives with high output ratings*

#### Main applications

Machines and plants in industrial applications, where machine axes should be quickly and precisely positioned in the simplest possible way.

Machines and plants in industrial applications (packaging, plastics, textile, printing, wood, glass, ceramics, presses, paper, lifting equipment, semiconductors, automated assembly and testing equipment, handling, machine tools)

Machines and plants in the process and production industry, food, beverages and tobacco, automotive and steel industry, mining/open-pit mining, shipbuilding, lifting equipment, conveyors

#### Application examples

- Handling equipment
- Feed and withdrawal devices
- Stacking units
- Automatic assembly machines
- Laboratory automation
- Metalworking
- Woodworking, glass and ceramic industries
- Plastics processing machines
- Tracking systems for solar technology

- Motion control applications (positioning, synchronous operation)
- Numerical control, interpolating motion control
- Converting
- Technological applications

- Test stand drives
- Centrifuges
- Elevators and cranes
- Cross cutters and shears
- Conveyor belts
- Presses
- Cable winches

#### Highlights

- For universal use
- Flexible and modular
- Scalable in terms of power rating, functionality
- Simple and fast commissioning, auto-configuration
- Wide range of motors
- Optimum interaction with SIMATIC

- For universal use
- Flexible and modular
- Scalable in terms of power rating, functionality, number of axes, performance
- Simple and fast commissioning, auto-configuration
- Wide range of motors
- Optimum interaction with SIMOTION, SINUMERIK and SIMATIC

- Four-quadrant operation as standard
- High control accuracy and dynamic response
- Minimum harmonic effects on the supply system, considerably lower than the limits specified in IEEE 519 THD
- Tolerant to line voltage fluctuations
- Simple and fast commissioning
- Ready-to-connect cabinet unit
- Optimum interaction with SIMATIC

## SINAMICS SM150

*The drive solution for demanding single-motor and multi-motor drives*

## SINAMICS GL150

*The drive solution for synchronous motors up to 120 MW*

## SINAMICS SL150

*The drive solution for slow speed motors with highest torques and overloads*

## Main applications

Machines and plants in the process industry

Plants and machines in the steel, mining and engineering sector

Plants and machines in the process industry, especially in the oil, gas and petrochemicals sectors

Plants and machines in the basic materials industry, especially in the steel and mining sectors

## Application examples

- Pumps and fans
- Compressors
- Extruders and mixers
- Mills
- Marine drives

- Hot and cold rolling mill stands
- Mine hoists
- Test stand drives
- Ore conveyor belts

- Compressors
- Pumps and fans
- Extruders and kneaders
- Marine drives
- Blast furnace blowers

- Hot rolling mill roughing stands
- Mine hoists
- Ore and cement mills
- Excavators

## Highlights

- Space-saving
- Simple and fast commissioning
- Ready-to-connect cabinet units
- Optimum interaction with SIMATIC
- Liquid- and air-cooled version

- Four-quadrant operation as standard
- High efficiency and minimum load on the motor
- High control accuracy and dynamic performance
- Almost free of line-current harmonics
- Option of reactive power compensation
- Simple and fast commissioning
- Ready-to-connect cabinet unit
- Optimum interaction with SIMATIC
- Liquid- and air-cooled version

- Compact design and high power density
- Easy operation and monitoring
- Extremely rugged, reliable and almost maintenance-free
- Two directions of rotation by reversing the rotating field
- Capable of seamless integration into higher-level automation systems
- Liquid- and air-cooled version

- Low output frequency/motor speed
- High short-time overload capability
- Four-quadrant operation as standard
- Extremely rugged, reliable and almost maintenance-free
- High efficiency
- Capable of seamless integration into higher-level automation systems
- Liquid- and air-cooled version

##### SINAMICS DCM

*The scalable drive system  
for basic and demanding applications*

#### Main applications

Machines and plants in the industrial environment (steel/aluminum, plastics, printing, paper, cranes, mining/open-cast mining, oil and gas, excitation equipment) in the new plant and retrofit businesses

#### Application examples

- Rolling mills
- Cross cutters and shears
- Wire-drawing machines
- Extruders and kneaders
- Presses
- Elevators and cranes
- Cableways and lifts
- Mine hoists
- Test stand drives

#### Highlights

- PROFIBUS as standard, PROFINET optional
- Variance of the Control Units
- 24 V DC electronics power supply
- Power unit isolated with respect to ground
- Free function blocks and Drive Control Chart
- Expandable functionality using SINAMICS components
- Single-phase connection possible
- Coated modules and nickel-plated copper busbars
- Wide temperature range

#### Catalog

D 23.1

**Overview**

The SINAMICS GM150 and SINAMICS SM150 converters are the expansion of the SINAMICS drive family in the medium voltage range. They are supplied as ready-to-connect cabinet units.

**SINAMICS GM150**

SINAMICS GM150 converters are designed as an individual drive for applications with quadratic and constant load characteristics without regenerative feedback.

Typical applications:

- Pumps and fans
- Compressors
- Extruders and mixers
- Mills
- Marine drives

The inverters on the motor side (Motor Modules) have IGBT power semiconductors in the lower power range to 13 MVA and IGCT power semiconductors in the upper power range from 10 MVA to 21 MVA.

**SINAMICS SM150**

SINAMICS SM150 converters are designed for demanding single and multi-motor applications and meet the following requirements:

- High dynamic response
- Operation at low frequency
- Line power factor = 1.0 (can be freely selected)
- Four-quadrant operation

Typical applications:

- Roller drives (cold, hot)
- Hoisting drives
- Test stands
- Belt systems

Both the line-side infeed/regenerative feedback units (Active Line Modules) and the motor-side inverters are either equipped with IGBT or IGCT power semiconductors.

## Medium-Voltage Converter

### SINAMICS GM150 in IGBT version

#### Overview

SINAMICS GM150 as IGBT version (air-cooled)

SINAMICS GM150 converters as IGBT version can be optimally combined with Siemens converter motors. Sine-wave filters are not required in this case. This ensures that the drive solution is particularly cost-effective, compact and efficient.

With the sine-wave filter available as an optional extra, the converters offer the best conditions on the market for the operation of line motors. This makes them ideally suited for the retrofitting of existing systems from fixed-speed drives to speed-controlled drives.

SINAMICS GM150 converters as IGBT version offer economic drive solutions that can be matched to customers' specific requirements by adding from the wide range of available components and options.

IGBT converters are available for the following voltages and outputs:

| Rated output voltage | Type rating with air cooling | Type rating with water cooling |
|----------------------|------------------------------|--------------------------------|
| 2.3 kV               | 1.0 ... 3.2 MVA              | 2.0 ... 4.0 MVA                |
| 3.3 kV               | 1.0 ... 8.0 MVA              | 2.0 ... 10.3 MVA               |
| 4.16 kV              | 1.3 ... 10.1 MVA             | 2.0 ... 13.0 MVA               |

#### Global use

SINAMICS GM150 converters as IGBT version are manufactured to international standards and regulations, making them ideally suited for global use. These converters are also available in a UL-listed version and in a ship-going form (meeting the requirements of all major classification organizations).

#### Benefits

- Compact design and high flexibility in configuration ensures easy plant integration
- Easy operation and monitoring on the convenient operator panel
- Easy and reliable operation through integrated maintenance functions: the converter signals early and automatically if maintenance is required or components need to be exchanged
- High robustness and reliability due to the use of HV-IGBT technology and fuseless installation combined with intelligent reaction to external disturbances
- Can be easily integrated into automation solutions due to PROFIBUS interface supplied as standard and various analog and digital interfaces
- High level of service-friendliness through innovative power section design with plug-in power cards and easy access to all components

## Design

SINAMICS GM150 converters in the IGBT version are available with a 12-pulse or 24-pulse Basic Line Module.

The 12-pulse version is standard for smaller output ratings with voltages of 2.3 kV, 3.3 kV and 4.16 kV.

For higher output power ratings, two Basic Line Modules with a common DC link or two Line Modules (24-pulse Basic Line Modules) are connected in parallel.

The 24-pulse Basic Line Module is optionally available for smaller output ratings with voltages of 2.3 kV, 3.3 kV and 4.16 kV.

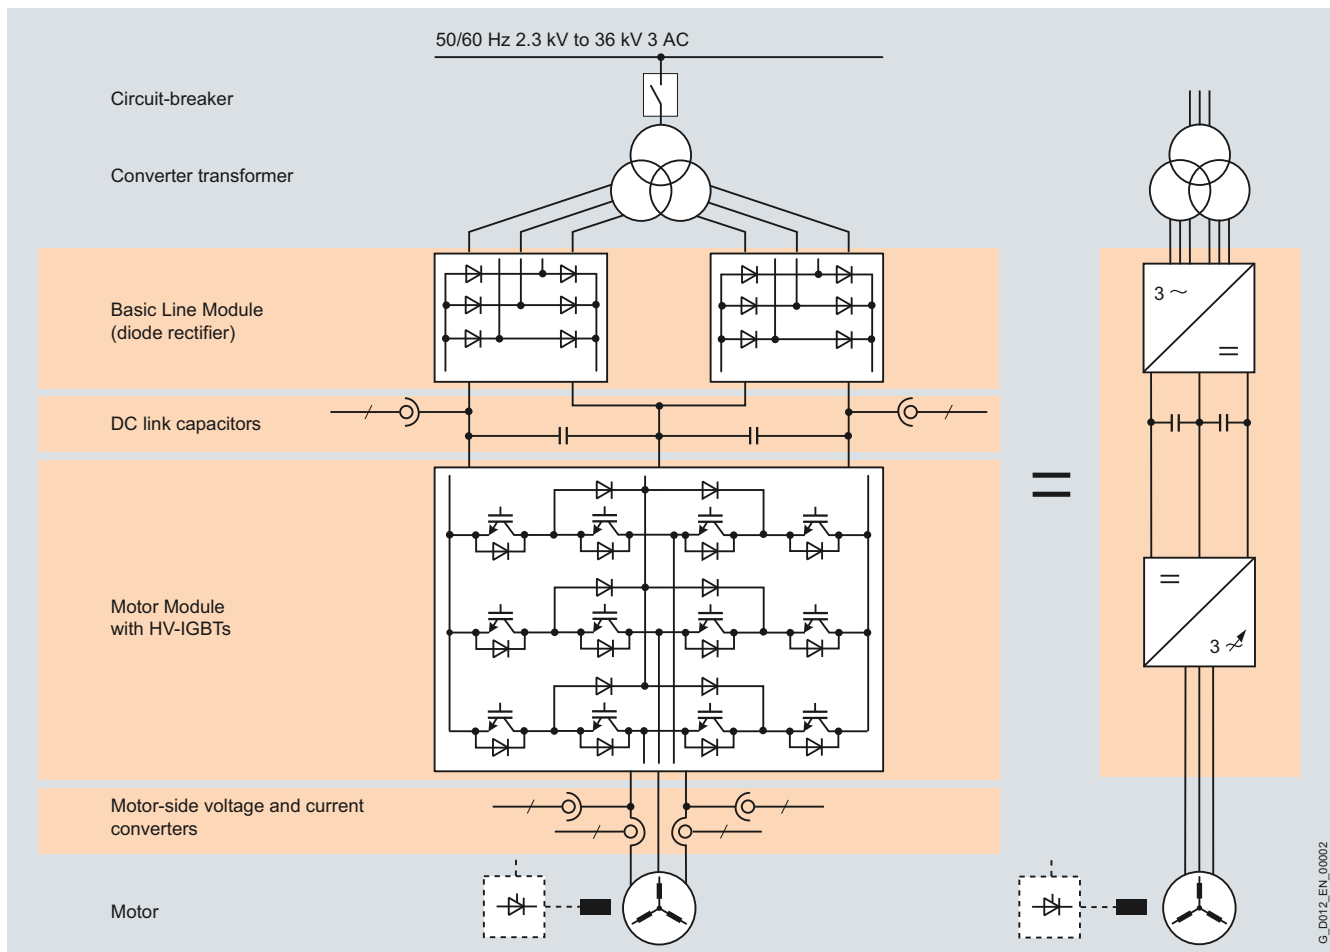

HV-IGBT power semiconductors are used in the Motor Modules – they are mounted on plug-in Power cards that are simple to replace.

Both line and motor connections can be optionally realized from underneath or above.

The converter cabinet unit consists of a section for the Basic Line Module, a section for the Motor Module and the control section.

## Medium-Voltage Converter

### SINAMICS GM150 in IGBT version

#### Design

The following wiring versions are available for SINAMICS GM150 as IGBT version.

2

Basic circuit, 12-pulse infeed, diode rectifier in the Basic Line Module connected in series

24-pulse infeed by connecting two Basic Line Modules in parallel (option **N15**), diode rectifier connected in parallel in the Basic Line Module

Increased power rating by connecting Basic Line Modules and Motor Modules in parallel on a common DC bus for 3.3 kV and 4.16 kV (24-pulse infeed as standard), diode rectifier connected in parallel in the Basic Line Module

Design

Basic circuit with sine-wave filter for operating line motors (option **Y15**), diode rectifier connected in series in the Basic Line Module

24-pulse infeed by connecting two Basic Line Modules in parallel (option **N15**), diode rectifier connected in parallel in the Basic Line Module here, with sine-wave filter for operating line motors (option **Y15**)

Parallel circuit with sine-wave filter for operating line motors for 3.3 kV and 4.16 kV (option **Y15**), diode rectifier connected in parallel in the Basic Line Module

**Note:** The motor cables are combined in the motor terminal box.

##### Software and protection functions

| SINAMICS GM150 in IGBT version                     | Description   |
|--|---|
| <b>Closed-loop control</b>                         | <p>The motor-side closed-loop control is realized as a field-oriented closed-loop vector control that can be operated as a speed or torque control as required. The closed-loop vector control achieves the dynamic performance of a DC drive. This is made possible by the fact that the current components forming the torque and flux can be controlled precisely independently of each other. Prescribed torques can thus be observed and limited accurately. In the speed range from 1:10, the field-oriented closed-loop control does not require an actual speed value encoder.</p> <p>An actual speed value encoder is required in the following scenarios:</p> <ul style="list-style-type: none"> <li>• High dynamics requirements</li> <li>• Torque control/constant torque drives with a control range &gt; 1:10</li> <li>• Very low speeds</li> <li>• Very high speed accuracy</li> </ul> |
| <b>Setpoint input</b>                              | The setpoint can be defined internally or externally; internally as a fixed setpoint, motorized potentiometer setpoint or jog setpoint, externally via the PROFIBUS interface or an analog input of the customer's terminal strip. The internal fixed setpoint and the motorized potentiometer setpoint can be switched over or adjusted using control commands via all of the interfaces.  |
| <b>Ramp-function generator</b>                     | A user-friendly ramp-function generator with separately adjustable ramp-up and ramp-down times, together with variable smoothing times in the lower and upper speed ranges, improves the control response and therefore prevents mechanical overloading of the drive train. The ramp-down ramps can be parameterized separately for emergency stop.   |
| <b>V<sub>dc max</sub> controller</b>               | The V <sub>dc max</sub> controller automatically prevents overvoltages in the DC link if the down ramp is too short, for example. This can also extend the set ramp-down time.  |
| <b>Kinetic buffering (KIP)</b>                     | Power supply failures are bridged to the extent permitted by the kinetic energy of the drive train. The speed drops depending on the moment of inertia and the load torque. The current speed setpoint is resumed when the power supply returns. This function can cause fast load cycles changes which may have a negative effect on the infeed line (in particular on weak lines e.g. on ships).  |
| <b>Automatic restart (option L32)</b>              | The automatic restart switches the drive on again when the power is restored after a power failure or a general fault, and ramps up to the current speed setpoint.  |
| <b>Flying restart</b>                              | The flying restart function permits smooth connection of the converter to a rotating motor.   |
| <b>Diagnostics functions</b>                       | <ul style="list-style-type: none"> <li>• Self-diagnosis of control hardware</li> <li>• Non-volatile memory for reliable diagnosis when the power supply fails</li> <li>• Monitoring of HV IGBTs with individual messages for each slot</li> <li>• User-friendly on-site operator panel with plain text messages</li> </ul>  |
| <b>Operating hours and switching cycle counter</b> | The operating hours of the non-redundant fans, which are located on the roof section of the cabinets, are detected and logged so that preventive maintenance can be performed or equipment replaced as a preventive measure. The switching cycles of the circuit breaker are recorded and added together, to form the basis of preventive maintenance work.   |

### Software and protection functions

| SINAMICS GM150 in IGBT version                   | Description   |
|--|---|
| <b>Detecting the actual motor speed (option)</b> | The SMC30 encoder module can be used to record the actual motor speed. The signals from the rotary pulse encoder are converted here and made available to the closed-loop control for evaluation via the DRIVE-CLIQ interface.  |
| <b>Operator protection</b>                       | The cabinet doors of the power units are fitted with electromagnetic locks. This prevents the cabinet doors being opened while hazardous voltages are connected inside the cabinet.   |
| <b>EMERGENCY-OFF button</b>                      | The converters are equipped as standard with an EMERGENCY-OFF button with protective collar which is fitted in the cabinet door. The contacts of the button are connected in parallel to the terminal strip so they can be integrated in a protection concept on the plant side. EMERGENCY-OFF stop category 0 is set as standard for an uncontrolled shutdown (DIN EN 60204-1/VDE 0113-1 (IEC 60204-1)). The function includes voltage disconnection of the converter output through the circuit breaker. The motor coasts in the process. EMERGENCY-STOP category 1 is optionally available for a controlled shutdown (option <b>L60</b> ).   |
| <b>Insulation monitoring</b>                     | The converters feature insulation monitoring of the complete electrical circuit from the secondary side of the transformer to the stator windings of the motor.   |
| <b>Monitoring of the peripherals</b>             | An extensive package of options for I/O monitoring (from the transformer and the motor through to the auxiliaries) is available.  |
| <b>Thermal overload protection</b>               | An alarm message is issued first when the overtemperature threshold is reached. If the temperature rises further, either a shutdown is carried out or automatic influencing of the output current so that a reduction in the thermal load is achieved. Following elimination of the cause of the fault (e.g. improvement in the ventilation), the original operating values are automatically resumed.<br><br>For instance, for air-cooled converters and when filter mats are used, the amount of pollution of the filter mats is monitored by measuring the differential pressure which is then signaled. In the case of water-cooled converters, the water temperature and flow rate are recorded at several points in the cooling circuit and evaluated. Extensive self-diagnostic functions signal faults and therefore protect the converter. |
| <b>Grounding switch (option)</b>                 | If grounding on the infeed or motor side is required for safety and protection reasons, a motorized grounding switch can be ordered.<br><br>For safety reasons, the converter controller locks these grounding switches against activation while voltage is still present. The control is integrated into the protection and monitoring chain of the converter. The grounding switches are inserted automatically when the standard grounding switches of the DC link are inserted.   |
| <b>Capacitor tripping device (option)</b>        | For applications in which the existing circuit breaker has no undervoltage coil and cannot be retrofitted there are capacitor tripping devices for 110 V to 120 V DC and for 220 V DC.<br><br>The capacitor tripping device ensures that the circuit breaker on the plant side can still be reliably opened even if there is a power failure or the normal OFF command is not effective, e.g. because of a wire break.  |

### AOP30 operator panel

The AOP30 operator panel is fitted into the cabinet door of the SINAMICS GM150 to enable operation, monitoring and commissioning.

It has the following features and characteristics:

- Graphical LCD display with backlighting for plain-text display and a bar display of process variables
- LEDs for displaying the operational status
- Help function describing causes of and remedies for faults and alarms
- Membrane keyboard with keypad for operational control of a drive
- Local/remote switchover to select the operator control location (priority assigned to operator panel or customer's terminal strip/PROFIBUS)
- Numeric keypad for input of setpoint or parameter values
- Function keys for prompted navigation in the menu
- Two-stage safety strategy to protect against accidental or unauthorized changes to settings. The keyboard lock disables operation of the drive from the operator panel, so that only parameter values and process variables can be displayed. A password can be used to prevent the unauthorized modification of converter parameters.

The operator panel languages – English, German, Spanish and Chinese – are stored on the CompactFlash card of the Control Unit.

## Medium-Voltage Converter

### SINAMICS GM150 in IGBT version

#### Options

When ordering a converter with options, add "-Z" to the order number of the converter, followed by the order code(s) for the desired option(s).

Example:

6SL3810-2LM32-5AA0-Z  
+N15+L60+...

In the following tables, related options are arranged in groups. Whether the options can be combined or are mutually exclusive is indicated within these groups. A detailed description of the options can be found in Chapter 6.

| Input-side options  |     | N15 | N20 | N21 | N13 |  |
|---|-----|-----|-----|-----|-----|--|
| 24-pulse Basic Line Module  | N15 |     | ✓   | ✓   | –   |  |
| Capacitor tripping device 110 V to 120 V DC                                       | N20 | ✓   |     | –   | ✓   |  |
| Capacitor tripping device 230 V DC  | N21 | ✓   | –   |     | ✓   |  |
| Circuit breaker at converter input<br>(for 24-pulse Basic Line Module on request) | N13 | –   | ✓   | ✓   |     |  |

| Output-side options                               |     | L08 | Y15 | L29 | L52 | L72 | Y73 |  |
|---|-----|-----|-----|-----|-----|-----|-----|--|
| Output reactor                                    | L08 |     | –   | ✓   | ✓   | ✓   | ✓   |  |
| Sine-wave filter (plain text required)            | Y15 | –   |     | ✓   | ✓   | ✓   | ✓   |  |
| Bidirectional synchronized bypass operation       | L29 | ✓   | ✓   |     | ✓   | ✓   | ✓   |  |
| Circuit breaker at converter output <sup>1)</sup> | L52 | ✓   | ✓   | ✓   |     | ✓   | ✓   |  |
| Braking Module                                    | L72 | ✓   | ✓   | ✓   | ✓   |     | ✓   |  |
| Braking resistor                                  | Y73 | ✓   | ✓   | ✓   | ✓   | ✓   |     |  |

<sup>1)</sup> Option **L52** cannot be combined with option **L51** (disconnector at converter output).

| Protective functions  |     | K80 | L48 | L49 | L51 | L60 | M10 |  |
|---|-----|-----|-----|-----|-----|-----|-----|--|
| Control of "Safe Torque Off" function (on request)                  | K80 |     | ✓   | ✓   | ✓   | ✓   | ✓   |  |
| Make-proof grounding switch at converter input<br>(motor-operated)  | L48 | ✓   |     | ✓   | ✓   | ✓   | ✓   |  |
| Make-proof grounding switch at converter output<br>(motor-operated) | L49 | ✓   | ✓   |     | ✓   | ✓   | ✓   |  |
| Disconnecter at converter output <sup>1)</sup>                      | L51 | ✓   | ✓   | ✓   |     | ✓   | ✓   |  |
| EMERGENCY-STOP, Stop Category 1<br>for controlled stopping          | L60 | ✓   | ✓   | ✓   | ✓   |     | ✓   |  |
| Safety interlocking system  | M10 | ✓   | ✓   | ✓   | ✓   | ✓   |     |  |

<sup>1)</sup> Option **L51** cannot be combined with option **L52** (circuit breaker at converter output).

Options can be combined

Options are mutually exclusive

### Options

| Temperature sensing and evaluation<br>(standard: 3 Pt100 inputs)  |            | L80 | L81 | L82 | L90 | L91 | L93 | L95 |
|---|------------|-----|-----|-----|-----|-----|-----|-----|
| 2 thermistor motor protection relays for alarm and fault <sup>1)</sup>  | <b>L80</b> |     | –   | –   | ✓   | ✓   | ✓   | ✓   |
| 2 x 2 thermistor protection relays for alarm and fault <sup>1)</sup>  | <b>L81</b> | –   |     | –   | ✓   | ✓   | ✓   | ✓   |
| 3 x 2 thermistor protection relays for alarm and fault <sup>1)</sup>  | <b>L82</b> | –   | –   |     | ✓   | ✓   | ✓   | ✓   |
| Pt100 evaluation unit with 3 inputs <sup>1)</sup>   | <b>L90</b> | ✓   | ✓   | ✓   |     | –   | –   | –   |
| 2 Pt100 evaluation units with 3 inputs each <sup>1)</sup>   | <b>L91</b> | ✓   | ✓   | ✓   | –   |     | –   | –   |
| Pt100 evaluation unit with 6 inputs and 2 analog outputs<br>(outputs for display connected to the control system) <sup>1)</sup> | <b>L93</b> | ✓   | ✓   | ✓   | –   | –   |     | –   |
| Pt100 evaluation unit with 6 inputs for explosion-protected<br>motors and 2 analog outputs <sup>1)</sup>                        | <b>L95</b> | ✓   | ✓   | ✓   | –   | –   | –   |     |

<sup>1)</sup> Options **L..** cannot be combined with option **G61** (additional TM31 Terminal Module).

| Increased degree of protection of the control cabinets<br>in the air-cooled version (standard: IP22) |            | M11 | M42 |
|--|------------|-----|-----|
| Dust protection  | <b>M11</b> |     | ✓   |
| IP42 degree of protection  | <b>M42</b> | ✓   |     |

| Increased degree of protection of the control cabinets<br>in the water-cooled version (standard: IP43) |            |
|--|------------|
| IP54 degree of protection  | <b>M54</b> |

| Improvement in dust protection before commissioning<br>in the water-cooled version |            |
|--|------------|
| Extended dust protection   | <b>M16</b> |

| Controlled motor feeder for auxiliaries <sup>1)</sup>                      |            | N30 | N31 | N32 | N33 |
|--|------------|-----|-----|-----|-----|
| Controlled motor feeder for auxiliaries 440/480 V 3 AC,<br>max. 4/4.8 kW   | <b>N30</b> |     | –   | –   | –   |
| Controlled motor feeder for auxiliaries 440/480 V 3 AC,<br>max. 7/8 kW     | <b>N31</b> | –   |     | –   | –   |
| Controlled motor feeder for auxiliaries 440/480 V 3 AC,<br>max. 11/12.7 kW | <b>N32</b> | –   | –   |     | –   |
| Controlled motor feeder for auxiliaries 440/480 V 3 AC,<br>max. 15/17.5 kW | <b>N33</b> | –   | –   | –   |     |

<sup>1)</sup> With the ON command at the converter, the contactor is **closed**, and with the OFF command, the contactor is **opened** (example: external fan on the motor). The supply voltage for the auxiliaries must be provided externally.

| Controlled outgoing feeder for auxiliaries <sup>1)</sup>                      |            | N35 | N36 | N37 | N38 |
|---|------------|-----|-----|-----|-----|
| Controlled outgoing feeder for auxiliaries 230/120 V 1 AC,<br>max. 1.2/1 kW   | <b>N35</b> |     | –   | –   | –   |
| Controlled outgoing feeder for auxiliaries 230/120 V 1 AC,<br>max. 2.2/1.5 kW | <b>N36</b> | –   |     | –   | –   |
| Controlled outgoing feeder for auxiliaries 230/120 V 1 AC,<br>max. 3.5/2.1 kW | <b>N37</b> | –   | –   |     | –   |
| Controlled outgoing feeder for auxiliaries 230/120 V 1 AC,<br>max. 4.5/2.8 kW | <b>N38</b> | –   | –   | –   |     |

<sup>1)</sup> With the ON command at the converter, the contactor is **opened**, and with the OFF command, the contactor is **closed** (example: heater). The supply voltage for the auxiliaries must be provided externally.

# SINAMICS GM150

## Medium-Voltage Converter

### SINAMICS GM150 in IGBT version

#### Technical specifications

| General technical data  |   |
|---|---|
| <b>Power components</b>   | Diodes, 3.3 kV IGBTs  |
| <b>Line-side converter</b>  |   |
| • Standard  | Lower power ratings at 2.3 ... 4.16 kV: 12-pulse diode rectifier (Basic Line Module)<br>Higher power ratings at 2.3 ... 4.16 kV: 24-pulse diode rectifier (Basic Line Module)   |
| • Option  | Lower power ratings at 2.3 ... 4.16 kV: 24-pulse diode rectifier (Basic Line Module)  |
| <b>Line-side converter</b>  | Inverter (Motor Module)   |
| <b>Closed-loop control</b>  | Closed-loop vector control  |
| <b>Drive quadrants</b>  | 2 (driving 2 directions of rotation)  |
| <b>Electrical isolation, power unit/<br/>open-loop and closed-loop control</b>  | Fiber-optic cable, insulating transformer   |
| <b>Auxiliary power supply</b><br>(for fans, coolant pumps,<br>precharging the DC link capacitors,<br>open-loop and closed-loop control) | 230 V 1 AC ±10 %, 50/60 Hz ±3 % and<br>400 V 3 AC ±10 %, 50/60 Hz ±3 %<br>or another auxiliary voltage (options <b>C30 to C55</b> )   |
| <b>Installation altitude</b>  | ≤ 1000 m above sea level: 100 % load capability<br>> 1000 ... 4000 m above sea level: current derating required<br>> 2000 ... 4000 m above sea level: voltage derating required in addition   |
| <b>Insulation</b>   | According to EN 50178/VDE 0160 (IEC 62103): Pollution degree 2 (without conductive pollution), condensation not permissible   |
| <b>Degree of protection</b>   | According to EN 60529/VDE 0470 T1 (IEC 60529):  |
| • Standard  | IP22 (air cooling), IP43 (water cooling)  |
| • Option  | IP42 (air cooling), IP54 (water cooling)  |
| <b>Protection class</b>   | I according to EN 61800-5-1/VDE 0160 T105 (IEC 61800-5-1)   |
| <b>Shock-hazard protection</b>  | EN 50274/VDE 0660 T514 and BGV A3 when used for the intended application  |
| <b>Interference transmission</b>  | This drive unit is part of a PDS, Category C4 according to EN 61800-3/VDE 0160 T103 (IEC 61800-3). It has not been designed to be connected to the public line supply. EMC disturbances can occur when connected to these line supplies. The essential requirements placed on EMC protection for the drive system should be secured using an EMC plan on the customer side.   |
| <b>Paint finish/color</b>   | Indoor requirements/RAL 7035, light gray  |
| <b>Applicable standards and directives</b>  |   |
| • Standards   | EN 61800-3/VDE 0160 T103 (IEC 61800-3)<br>EN 61800-4/VDE 0160 T104 (IEC 61800-4), however, only if referenced in the standards EN 61800-3 or EN 61800-5-1<br>EN 61800-5-1/VDE 0160 T105 (IEC 61800-5-1)<br>EN 60146-1-1/VDE 0558 T11 (IEC 60146-1-1)<br>EN 50178/VDE 0160 (IEC 62103)<br>EN 60204-11/VDE 0113 T11 (IEC 60204-11), however, structuring principles and reference marking according to EN 61346-1 instead of EN 81346-1 |
| • EU directives   | 2006/95/EC + amendments (Low Voltage Directive)<br>2004/108/EC + amendments (Electromagnetic Compatibility)   |
| <b>Air cooling</b>  | Forced air cooling with integrated fans   |
| <b>Water cooling</b>  | Water-water cooling unit, internal circuit, deionized water   |
| <b>Permissible coolant temperature</b><br>(raw water)   |   |
| • Inlet   | 5 ... 35 °C   |
| • Discharge, max.   | 40 °C   |

#### Rated data

|   | 2.3 kV         | 3.3 kV         | 4.16 kV        |
|---|----------------|----------------|----------------|

#### Note:

The values specified under storage and transport apply to suitably packed converters.

# SINAMICS GM150

## Medium-Voltage Converter

### SINAMICS GM150 in IGBT version

#### Technical specifications

##### Derating for special installation conditions

##### Current derating

If the converters are operated at installation altitudes from 1000 m above sea level or at ambient/coolant temperatures > 40 °C for air cooling or with intake temperatures in the cooling unit > 35 °, derating factors  $k_H$  or  $k_T$  must be taken into account for the rated current (DIN 43671). For the permitted continuous current  $I$ :

$$I \leq I_N \times k_H \times k_T$$

$I$ : permitted continuous current

$I_N$ : rated current

Current derating as a function of the installation altitude (air cooling)

Derating factor  $k_H$  for air cooling

Current derating as a function of the installation altitude (water cooling)

Derating factor  $k_H$  for water cooling

Current derating as a function of ambient temperature

Derating factor  $k_T$  (ambient temperature)

Current derating as a function of the raw water intake temperature

Derating factor  $k_T$  (raw water intake temperature)

##### Voltage derating

For installation altitudes >2000 m, according to DIN EN 60664-1/VDE 0110 (IEC 60664-1) in addition to a current derating, a voltage derating is also required. This depends on the air and creepage distances in the unit.

Voltage derating as a function of installation altitude

Derating factor  $k_U$

### Technical specifications

#### Example 1 (air-cooled converter)

Derating data SINAMICS GM150 in IGBT version

|                             |                    |
|-----------------------------|--------------------|
| Drive unit                  | 6SL3810-2LP33-0AA0 |
| Output voltage              | 4.16 kV            |
| Input voltage               | 2 × 2.2 kV         |
| Type rating                 | 2200 kVA, 300 A    |
| Installation altitude       | 3000 m             |
| Ambient temperature, max.   | 30 °C              |
| $k_H$ (air cooling)         | 0.84               |
| $k_T$ (ambient temperature) | 1.0                |
| $k_U$                       | 0.9                |

For the current, the following applies:

$$I \leq I_N \times 0.84 \times 1.0 = I_N \times 0.84$$

A current derating of 16 % and a voltage derating of 10 % are required. The converter may still be connected to a line supply voltage of 2 × 1.98 kV 3 AC.

The maximum available output current is 252 A.

#### Example 2 (water-cooled converter)

Derating data SINAMICS GM150 in IGBT version

|                                      |                    |
|--------------------------------------|--------------------|
| Drive unit                           | 6SL3815-2LN33-5AA0 |
| Output voltage                       | 3.3 kV             |
| Input voltage                        | 2 × 1.7 kV         |
| Type rating                          | 2000 kVA, 350 A    |
| Installation altitude                | 2000 m             |
| Raw water intake temperature         | 40 °C              |
| $k_H$ (water cooling)                | 0.925              |
| $k_T$ (raw water intake temperature) | 0.925              |
| $k_U$                                | 1.0                |

For the current, the following applies:

$$I \leq I_N \times 0.925 \times 0.925 = I_N \times 0.856$$

A current derating of 14.4 % is required.

The maximum available output current is 299 A.

| <b>Circuit version (Page 2/4)</b>   | Fig. No.                  | ①                  | ①                  | ①                  | ①                  | ①                  |
| <b>Weight <sup>7)</sup></b>   | kg                        | 1750               | 1750               | 1750               | 1750               | 1750               |

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \phi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Without cooling system

<sup>3)</sup> The typical current drawn (rms value;  $\cos \phi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>4)</sup> Additional 20 A precharging current for 25 s.

<sup>5)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/4](#).

<sup>6)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>7)</sup> The specified dimensions and weights include doors and panels, however no options.

| <b>Weight <sup>7)</sup></b>   | kg                        | 1900               | 1900               | 1900               | 1900               | 1900               |

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \phi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Without cooling system

<sup>3)</sup> The typical current drawn (rms value;  $\cos \phi_{typ.} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>4)</sup> Additional 20 A precharging current for 25 s.

<sup>5)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/4](#).

<sup>6)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>7)</sup> The specified dimensions and weights include doors and panels, however no options.

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \phi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Without cooling system

<sup>3)</sup> The typical current drawn (rms value;  $\cos \phi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>4)</sup> Additional 20 A precharging current for 25 s.

<sup>5)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/4](#).

<sup>6)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>7)</sup> The specified dimensions and weights include doors and panels, however no options.

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \phi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Without cooling system

<sup>3)</sup> The typical current drawn (rms value;  $\cos \phi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35** to **N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>4)</sup> Additional 20 A precharging current for 25 s.

<sup>5)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/4](#).

<sup>6)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>7)</sup> The specified dimensions and weights include doors and panels, however no options.

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \phi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Without cooling system

<sup>3)</sup> The typical current drawn (rms value;  $\cos \phi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnectors are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>4)</sup> Additional 20 A precharging current for 25 s.

<sup>5)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/4](#).

<sup>6)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>7)</sup> The specified dimensions and weights include doors and panels, however no options.

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \phi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Without cooling system

<sup>3)</sup> The typical current drawn (rms value;  $\cos \phi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>4)</sup> Additional 20 A precharging current for 25 s.

<sup>5)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/4](#).

<sup>6)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>7)</sup> The specified dimensions and weights include doors and panels, however no options.

| <b>Circuit version<br/>(Page 2/5)</b>  | Fig. No.                     | ④                  | ④                  | ④                  |
| <b>Weight <sup>7)</sup></b>  | kg                           | 2900               | 2950               | 2950               |

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \varphi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Without cooling system

<sup>3)</sup> The typical current drawn (rms value;  $\cos \varphi_{typ.} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>4)</sup> Additional 20 A precharging current for 25 s.

<sup>5)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/5](#).

<sup>6)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>7)</sup> The specified dimensions and weights include doors, panels and sine-wave filter (option **Y15**), however no additional options.

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \phi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Without cooling system

<sup>3)</sup> The typical current drawn (rms value;  $\cos \phi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>4)</sup> Additional 20 A precharging current for 25 s.

<sup>5)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/5](#).

<sup>6)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>7)</sup> The specified dimensions and weights include doors, panels and sine-wave filter (option **Y15**), however no additional options.

| <b>Weight <sup>7)</sup></b>   | kg                        | 3350               | 3350               | 3500               | 6500               | 6500               |

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \phi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Without cooling system

<sup>3)</sup> The typical current drawn (rms value;  $\cos \phi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>4)</sup> Additional 20 A precharging current for 25 s.

<sup>5)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/5](#).

<sup>6)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>7)</sup> The specified dimensions and weights include doors, panels and sine-wave filter (option **Y15**), however no additional options.

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \varphi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Without cooling system

<sup>3)</sup> The typical current drawn (rms value;  $\cos \varphi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35** to **N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>4)</sup> Additional 20 A precharging current for 25 s.

<sup>5)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/5](#).

<sup>6)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>7)</sup> The specified dimensions and weights include doors, panels and sine-wave filter (option **Y15**), however no additional options.

| <b>Weight <sup>7)</sup></b>   | kg                        | 3450               | 3450               | 3450               | 6500               | 6600               |

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \phi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Without cooling system

<sup>3)</sup> The typical current drawn (rms value;  $\cos \phi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>4)</sup> Additional 20 A precharging current for 25 s.

<sup>5)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/5](#).

<sup>6)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>7)</sup> The specified dimensions and weights include doors, panels and sine-wave filter (option **Y15**), however no additional options.

# SINAMICS GM150

## Medium-Voltage Converter

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \varphi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Approx. 5 % of the power loss is dissipated in the room.

<sup>3)</sup> Without cooling system

<sup>4)</sup> The typical current drawn (rms value;  $\cos \varphi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>5)</sup> Additional 20 A precharging current for 25 s.

<sup>6)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/4](#).

<sup>7)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>8)</sup> The specified dimensions and weights include doors, panels and cooling unit, however no options.

| Circuit version (Page 2/4)   | Fig. No.                  | ①                  | ①                  | ①                  | ①                  | ①           |
| Weight <sup>8)</sup>   | kg                        | 2750               | 2800               | 2800               | 2800               | 2850        |

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \varphi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Approx. 5 % of the power loss is dissipated in the room.

<sup>3)</sup> Without cooling system

<sup>4)</sup> The typical current drawn (rms value;  $\cos \varphi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>5)</sup> Additional 20 A precharging current for 25 s.

<sup>6)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/4](#).

<sup>7)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>8)</sup> The specified dimensions and weights include doors, panels and cooling unit, however no options.

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \varphi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Approx. 5 % of the power loss is dissipated in the room.

<sup>3)</sup> Without cooling system

<sup>4)</sup> The typical current drawn (rms value;  $\cos \varphi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35** to **N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>5)</sup> Additional 20 A precharging current for 25 s.

<sup>6)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/4](#).

<sup>7)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>8)</sup> The specified dimensions and weights include doors, panels and cooling unit, however no options.

# SINAMICS GM150

## Medium-Voltage Converter

SINAMICS GM150 in IGBT version  
Water cooling, without sine-wave filter

In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Approx. 5 % of the power loss is dissipated in the room.

<sup>3)</sup> Without cooling system

<sup>4)</sup> The typical current drawn (rms value;  $\cos \varphi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35** to **N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>5)</sup> Additional 20 A precharging current for 25 s.

<sup>6)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/4](#).

<sup>7)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>8)</sup> The specified dimensions and weights include doors, panels and cooling unit, however no options.

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \varphi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Approx. 5 % of the power loss is dissipated in the room.

<sup>3)</sup> Without cooling system

<sup>4)</sup> The typical current drawn (rms value;  $\cos \varphi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35** to **N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>5)</sup> Additional 20 A precharging current for 25 s.

<sup>6)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/4](#).

<sup>7)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>8)</sup> The specified dimensions and weights include doors, panels and cooling unit, however no options.

# SINAMICS GM150

## Medium-Voltage Converter

SINAMICS GM150 in IGBT version  
Water cooling, with sine-wave filter

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \varphi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Approx. 5 % of the power loss is dissipated in the room.

<sup>3)</sup> Without cooling system

<sup>4)</sup> The typical current drawn (rms value;  $\cos \varphi_{\text{typ}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>5)</sup> Additional 20 A precharging current for 25 s.

<sup>6)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/5](#).

<sup>7)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>8)</sup> The specified dimensions and weights include doors, panels, cooling unit and sine-wave filter (option **Y15**), however no additional options.

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \phi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Approx. 5 % of the power loss is dissipated in the room.

<sup>3)</sup> Without cooling system

<sup>4)</sup> The typical current drawn (rms value;  $\cos \phi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an

upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>5)</sup> Additional 20 A precharging current for 25 s.

<sup>6)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/5](#).

<sup>7)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>8)</sup> The specified dimensions and weights include doors, panels, cooling unit and sine-wave filter (option **Y15**), however no additional options.

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \varphi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Approx. 5 % of the power loss is dissipated in the room.

<sup>3)</sup> Without cooling system

<sup>4)</sup> The typical current drawn (rms value;  $\cos \varphi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>5)</sup> Additional 20 A precharging current for 25 s.

<sup>6)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/5](#).

<sup>7)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>8)</sup> The specified dimensions and weights include doors, panels, cooling unit and sine-wave filter (option **Y15**), however no additional options.

# SINAMICS GM150

## Medium-Voltage Converter

SINAMICS GM150 in IGBT version  
Water cooling, with sine-wave filter

| <b>Circuit version<br/>(Page 2/5)</b>  | Fig. No.                     | ④                      | ④                      | ④                      | ④                      | ④                      | ④                      |
| <b>Weight <sup>8)</sup></b>  | kg                           | 4300                   | 4300                   | 4850                   | 4850                   | 4850                   | 5200                   |

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \varphi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Approx. 5 % of the power loss is dissipated in the room.

<sup>3)</sup> Without cooling system

<sup>4)</sup> The typical current drawn (rms value;  $\cos \varphi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>5)</sup> Additional 20 A precharging current for 25 s.

<sup>6)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 2/5](#).

<sup>7)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>8)</sup> The specified dimensions and weights include doors, panels, cooling unit and sine-wave filter (option **Y15**), however no additional options.

<sup>9)</sup> For a combination with the power cable connection at the converter output from the top (option **M78**), then the cabinet width decreases by 600 mm.

## Medium-Voltage Converter

### SINAMICS GM150 in IGCT version

#### Overview

SINAMICS GM150 as IGCT version

The water-cooled SINAMICS GM150 converters in the IGCT version with IGCT Motor Modules represent an expansion of the SINAMICS GM150 converters in the IGBT version in the upper power range up to 21 MVA.

SINAMICS GM150 converters as IGCT version are optimally matched to Siemens motors.

SINAMICS GM150 converters as IGCT version offer economic drive solutions that can be matched to customers' specific requirements by adding from the wide range of available components and options.

IGCT converters are available for the following voltage and outputs:

| Rated output voltage | Type rating      |
|----------------------|------------------|
| 3.3 kV               | 10 MVA to 21 MVA |

#### Global use

SINAMICS GM150 converters as IGCT version are manufactured to international standards and regulations, making them ideally suited for global use. These converters are also available in ship-going form (meeting the requirements of all major classification organizations).

#### Benefits

- Compact design and high flexibility in configuration ensures easy plant integration
- Easy operation and monitoring on the convenient operator panel
- Easy and reliable operation through integrated maintenance functions: the converter signals early and automatically if maintenance is required or components need to be exchanged
- High robustness and reliability due to the use of IGCT power semiconductors in the high power range and fuseless installation combined with intelligent reaction to external disturbances
- Can be easily integrated into automation solutions due to PROFIBUS interface supplied as standard and various analog and digital interfaces
- High level of service-friendliness through innovative power section design with compact phase modules and easy access to all components

#### Design

SINAMICS GM150 converters in the IGCT version are available in the basic connection with a 12-pulse or 24-pulse Basic Line Module (option).

For greater output ratings, two or three complete converter units with isolated DC links are operated in parallel.

Phase components in which IGCTs, diodes etc. are grouped together in one pressure stack are used in the Motor Modules.

The converter consists of cabinet units for the Basic Line Module and for the Motor Module. One of three phase modules and the control section in the Motor Module cabinet unit are highlighted in the illustration.

option **N15**

Two converter units operated in parallel in order to increase the output <sup>1)</sup>, 24-pulse infeed

Three converter units operated in parallel in order to increase the output <sup>1)</sup>, 36-pulse infeed

<sup>1)</sup> Requires a motor with separate winding systems.

### Function

#### Characteristic features

| • Synchronous motor,<br>permanently excited  | On request                                 | Option     |

#### Software and protection functions

| SINAMICS GM150 in the IGCT version                 | Description   |
|--|---|
| <b>Closed-loop control</b>                         | <p>The motor-side closed-loop control is realized as a field-oriented closed-loop vector control that can be operated as a speed or torque control as required. The closed-loop vector control achieves the dynamic performance of a DC drive. This is made possible by the fact that the current components forming the torque and flux can be controlled precisely independently of each other. Prescribed torques can thus be observed and limited accurately. In the speed range from 1:10, the field-oriented closed-loop control does not require an actual speed value encoder.</p> <p>An actual speed value encoder is required in the following scenarios:</p> <ul style="list-style-type: none"> <li>• High dynamics requirements</li> <li>• Torque control/constant torque drives with a control range &gt; 1:10</li> <li>• Very low speeds</li> <li>• Very high speed accuracy</li> </ul> |
| <b>Setpoint input</b>                              | The setpoint can be defined internally or externally; internally as a fixed setpoint, motorized potentiometer setpoint or jog setpoint, externally via the PROFIBUS interface or an analog input of the customer's terminal strip. The internal fixed setpoint and the motorized potentiometer setpoint can be switched over or adjusted using control commands via all of the interfaces.  |
| <b>Ramp-function generator</b>                     | A user-friendly ramp-function generator with separately adjustable ramp-up and ramp-down times, together with variable smoothing times in the lower and upper speed ranges, improves the control response and therefore prevents mechanical overloading of the drive train. The ramp-down ramps can be parameterized separately for emergency stop.   |
| <b>V<sub>dc max</sub> controller</b>               | The V <sub>dc max</sub> controller automatically prevents overvoltages in the DC link if the down ramp is too short, for example. This can also extend the set ramp-down time.  |
| <b>Kinetic buffering (KIP)</b>                     | Power supply failures are bridged to the extent permitted by the kinetic energy of the drive train. The speed drops depending on the moment of inertia and the load torque. The current speed setpoint is resumed when the power supply returns. This function can cause fast load cycles changes which may have a negative effect on the infeed line (in particular on weak lines e.g. on ships).  |
| <b>Automatic restart (option L32)</b>              | The automatic restart switches the drive on again when the power is restored after a power failure or a general fault, and ramps up to the current speed setpoint.  |
| <b>Flying restart</b>                              | The flying restart function permits smooth connection of the converter to a rotating motor.   |
| <b>Diagnostics functions</b>                       | <ul style="list-style-type: none"> <li>• Self-diagnosis of control hardware</li> <li>• Non-volatile memory for reliable diagnosis when the power supply fails</li> <li>• Monitoring the IGBTs with individual messages for each mounting location</li> <li>• User-friendly on-site operator panel with plain text messages</li> </ul>   |
| <b>Operating hours and switching cycle counter</b> | The switching cycles of the circuit breakers are detected and summed to form the basis for preventive maintenance work.   |

# SINAMICS GM150

## Medium-Voltage Converter

### SINAMICS GM150 in IGCT version

#### Function

| SINAMICS GM150 in the IGCT version               | Description   |
|--|---|
| <b>Detecting the actual motor speed (option)</b> | The SMC30 encoder module can be used to record the actual motor speed. The signals from the rotary pulse encoder are converted here and made available to the closed-loop control for evaluation via the DRIVE-CLIQ interface.  |
| <b>Operator protection</b>                       | The cabinet doors of the power units are fitted with electromagnetic locks. This prevents the cabinet doors being opened while hazardous voltages are connected inside the cabinet.   |
| <b>EMERGENCY-OFF button</b>                      | The converters are equipped as standard with an EMERGENCY-OFF button with protective collar which is fitted in the cabinet door. The contacts of the button are connected in parallel to the terminal strip so they can be integrated in a protection concept on the plant side. EMERGENCY-OFF stop category 0 is set as standard for an uncontrolled shutdown (EN 60204-1/VDE 0113-1 (IEC 60204-1)). The function includes voltage disconnection of the converter output through the circuit breaker. The motor coasts in the process. EMERGENCY-STOP category 1 is optionally available for a controlled shutdown (option <b>L60</b> ). |
| <b>Insulation monitoring</b>                     | The converters feature insulation monitoring of the complete electrical circuit from the secondary side of the transformer to the stator windings of the motor.   |
| <b>Monitoring of the peripherals</b>             | An extensive package of options for I/O monitoring (from the transformer and the motor through to the auxiliaries) is available.<br>In addition, it is possible to monitor the temperature with thermocouples or Pt100 resistors.   |
| <b>Thermal overload protection</b>               | An alarm message is issued first when the overtemperature threshold is reached. If the temperature rises further, either a shutdown is carried out or automatic influencing of the output current so that a reduction in the thermal load is achieved. Following elimination of the cause of the fault (e.g. improvement in the ventilation), the original operating values are automatically resumed.<br>In the case of water-cooled converters, the water temperature and flow rate are recorded at several points in the cooling circuit and evaluated. An extensive self-diagnosis protects the converter and reports faults.         |
| <b>Grounding switch (option)</b>                 | If grounding on the infeed or motor side is required for safety and protection reasons, a motorized grounding switch can be ordered.<br>For safety reasons, the converter controller locks these grounding switches against activation while voltage is still present. The control is integrated into the protection and monitoring chain of the converter. The grounding switches are inserted automatically when the standard grounding switches of the DC link are inserted.   |

#### AOP30 operator panel

The AOP30 operator panel is fitted into the cabinet door of the SINAMICS GM150 to enable operation, monitoring and commissioning.

It has the following features and characteristics:

- Graphical LCD display with backlighting for plain-text display and a bar display of process variables
- LEDs for displaying the operational status
- Help function describing causes of and remedies for faults and alarms
- Membrane keyboard with keypad for operational control of a drive
- Local/remote switchover to select the operator control location (priority assigned to operator panel or customer's terminal strip/PROFIBUS)
- Numeric keypad for input of setpoint or parameter values
- Function keys for prompted navigation in the menu
- Two-stage safety strategy to protect against accidental or unauthorized changes to settings. The keyboard lock disables operation of the drive from the operator panel, so that only parameter values and process variables can be displayed. A password can be used to prevent the unauthorized modification of converter parameters.

The operator panel languages – English, German, Spanish and Chinese – are stored on the CompactFlash card of the Control Unit.

# SINAMICS GM150

## Medium-Voltage Converter

SINAMICS GM150 in IGCT version

### Configuration

#### Standard dimensioning

If the motor data are not precisely known, then the converter should be dimensioned based on the rated output current for typical induction motors. If current derating is required, then the derating factors are applied to this rated output current. The current derating when converter units are operated in parallel has already been taken into account for the values in the selection and ordering data table.

Higher output currents are also possible under certain conditions; refer to the following section.

#### Detailed dimensioning

If the motor data are more precisely known, then the converters can also be operated with higher output currents. In this case, the rated motor current must lie below the maximum thermal converter output current, and the motor short-circuit current must be less than the maximum permissible motor short-circuit current of the converter.

#### Note:

The motor short-circuit current is the current that flows in a system in the first 100 ms if all subsystems are short-circuited and the leakage paths are saturated.

For higher rated output currents, the type-specific technical data can differ. Please contact your regional Siemens sales partner if you have any questions on this topic.

During the detailed dimensioning phase, derating factors should be applied to the maximum thermal converter output current. The current derating when converter units are operated in parallel has already been taken into account for the values in the selection and ordering data table.

#### Options

When ordering a converter with options, add "-Z" to the order number of the converter, followed by the order code(s) for the desired option(s).

Example:

6SL3835-2LN41-8AA0-Z  
+N15+L60+...

In the following tables, related options are arranged in groups. Whether the options can be combined or are mutually exclusive is indicated within these groups. A detailed description of the options can be found in Chapter 6.

| Input-side options  |     | N15 | N13 |
|---|-----|-----|-----|
| 24-pulse Basic Line Module <sup>1)</sup>  | N15 |     | –   |
| Circuit breaker at converter input<br>(for 24-pulse Basic Line Module on request) | N13 | –   |     |

<sup>1)</sup> Option **N15** cannot be combined with option **L72** (Braking Module).

| Output-side options                               |     | L08 | L52 | L72 | Y73 |
|---|-----|-----|-----|-----|-----|

# SINAMICS GM150

## Medium-Voltage Converter

### SINAMICS GM150 in IGCT version

#### Technical specifications

| General technical data  |   |
|---|---|
| <b>Power components</b>   | Diodes, IGCTs   |
| <b>Line-side converter</b>  |   |
| • Standard  | 12-pulse diode rectifier (Basic Line Module)  |
| • Option  | 24-pulse diode rectifier (Basic Line Module)  |
| <b>Motor-side converter</b>   | Inverter (Motor Module)   |
| <b>Closed-loop control</b>  | Closed-loop vector control  |
| <b>Drive quadrants</b>  | 2 (2 directions of rotation, driving)   |
| <b>Electrical isolation, power unit/<br/>open-loop and closed-loop control</b>  | Closed-loop vector control, insulating transformer  |
| <b>Auxiliary power supply</b><br>(for fans, coolant pumps,<br>precharging the DC link capacitors,<br>open-loop and closed-loop control) | 230 V 1 AC ±10 %, 50/60 Hz ±3 % and<br>400 V 3 AC ±10 %, 50/60 Hz ±3 %<br>or another auxiliary voltage (options <b>C30 to C55</b> )   |
| <b>Installation altitude</b>  | ≤ 1000 m above sea level: 100 % load capability<br>>1000 ... 4000 m above sea level: current derating required<br>>2000 ... 4000 m above sea level: voltage derating required in addition   |
| <b>Insulation</b>   | According to EN 50178/VDE 0160 (IEC 62103): Pollution degree 2 (without conductive pollution), condensation not permissible   |
| <b>Degree of protection</b>   | According to EN 60529/VDE 0470 T1 (IEC 60529): IP43   |
| <b>Protection class</b>   | I acc. to EN 61800-5-1/VDE 0160 T105 (IEC 61800-5-1)  |
| <b>Shock-hazard protection</b>  | EN 50274/VDE 0660 T514 and BGV A3 when used for the intended application  |
| <b>Interference transmission</b>  | This drive unit is part of a PDS, Category C4 acc. to EN 61800-3/VDE 0160 T103 (IEC 61800-3). It has not been designed to be connected to the public line supply. EMC disturbances can occur when connected to these line supplies. The essential requirements placed on EMC protection for the drive system should be secured using an EMC plan on the customer side.  |
| <b>Paint finish/color</b>   | Indoor requirements/RAL 7035, light gray  |
| <b>Applicable standards and directives</b>  |   |
| • Standards   | EN 61800-3/VDE 0160 T103 (IEC 61800-3)<br>EN 61800-4/VDE 0160 T104 (IEC 61800-4), however, only if referenced in the standards EN 61800-3 or EN 61800-5-1<br>EN 61800-5-1/VDE 0160 T105 (IEC 61800-5-1)<br>EN 60146-1-1/VDE 0558 T11 (IEC 60146-1-1)<br>EN 50178/VDE 0160 (IEC 62103)<br>EN 60204-11/VDE 0113 T11 (IEC 60204-11), however, structuring principles and reference marking according to EN 61346-1 instead of EN 81346-1 |
| • EU directives   | 2006/95/EC + amendments (Low Voltage Directive)<br>2004/108/EC + amendments (Electromagnetic Compatibility)   |
| <b>Water cooling</b>  | Water-water cooling unit, internal circuit, deionized water   |
| <b>Permissible coolant temperature</b><br>(raw water)   |   |
| • Inlet   | 5 ... 35 °C   |
| • Discharge, max.   | 40 °C   |

#### Rated data

|   |                |
|---|----------------|
| <b>Output voltage</b>                     | <b>3.3 kV</b>  |
| <b>Input voltage</b>                      | 2 × 1.7 kV     |
| <b>Tolerance of input voltage</b>         | ±10 %          |
| <b>Line frequency</b>                     | 50/60 Hz ± 3 % |
| <b>Line power factor fundamental mode</b> | > 0.96         |

### Technical specifications

|   | Operation of induction motors        |                    | Operation of separately excited synchronous motors |
|---|--------------------------------------|--------------------|--|

Note:

The values specified under storage and transport apply to suitably packed converters.

# SINAMICS GM150

## Medium-Voltage Converter

### SINAMICS GM150 in IGCT version

#### Technical specifications

##### Derating for special installation conditions

##### Current derating

If the converters are operated at installation altitudes above 1000 m above sea level or with intake temperatures in the cooling unit  $> 35^\circ$ , derating factors  $k_H$  or  $k_T$  must be taken into account for the rated current (DIN 43671). For the permitted continuous current  $I$ :

$$I \leq I_N \times k_H \times k_T$$

$I$  permitted continuous current

$I_N$  rated current

Current derating as a function of the installation altitude (water cooling)

Derating factor  $k_H$  for water cooling

Current derating as a function of the raw water intake temperature

Derating factor  $k_T$  (raw water intake temperature)

##### Voltage derating

For installation altitudes  $> 2000$  m, acc. to EN 60664-1/VDE 0110 (IEC 60664-1) in addition to a current derating, a voltage derating is also required. This depends on the air and creepage distances in the unit.

Voltage derating as a function of installation altitude

Derating factor  $k_U$

##### Example

Derating data SINAMICS GM150 in IGCT version

|                                      |                              |
|--------------------------------------|------------------------------|
| Drive unit                           | 6SL3835-2LN43-6AA0           |
| Output voltage                       | 3.3 kV                       |
| Input voltage                        | $2 \times (2 \times 1.7)$ kV |
| Type rating                          | 18000 kVA, $2 \times 1570$ A |
| Installation altitude                | 2000 m                       |
| Raw water intake temperature         | $40^\circ\text{C}$           |
| $k_H$ (water cooling)                | 0.925                        |
| $k_T$ (raw water intake temperature) | 0.925                        |
| $k_U$                                | 1.0                          |

For the current, the following applies:

$$I \times I_N \times 0.925 \times 0.925 = I_N \times 0.856$$

For the standard version, a current derating of 14.4 % is required.

The maximum available output current is 1344 A for each subsystem.

SINAMICS GM150 in IGCT version  
Water cooling

### Technical specifications

3

- 1) The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with induction motors and for a typical motor power factor  $\cos \varphi$  and motor efficiency. The calculation is based on the rated output current. In this case, the kW and hp values lie in a power range, which is obtained by selecting the following values: Motor power factor between 0.85 and 0.88 and a motor efficiency of 96 %. The rated input current also depends on the line power factor, for which a typical value of between 0.94 and 0.96 was assumed.  
The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 500. Both approximate values need to be adapted to the motor which is actually used.
- 2) Approx. 5 % of the power loss is dissipated in the room.
- 3) Without cooling system
- 4) The typical current drawn (rms value;  $\cos \varphi_{\text{typ.}} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnecter at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnecter. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnecters are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

- 5) Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Page 3/4](#).
- 6) The maximum permissible cable lengths must be carefully observed (see [Power cables, Page 9/13](#)).
- 7) The specified dimensions and weights include doors, panels and cooling unit, however no options.

# SINAMICS SM150

## Medium-Voltage Converter

### SINAMICS SM150 in IGBT version

#### Overview

SINAMICS SM150 in the IGBT version

SINAMICS SM150 converters in the IGBT version, capable of energy recovery, are available as single-motor drives with IGBT power semiconductors.

IGBT converters are available for the following voltages and power ranges.

| Rated output voltage | Type rating with air cooling | Type rating with water cooling |
|----------------------|------------------------------|--------------------------------|
| 3.3 kV               | 3.4 and 4.6 MVA              | 4.6 and 5.7 MVA                |
| 4.16 kV              | 4.3 and 5.8 MVA              | 5.8 and 7.2 MVA                |

The rated power in the specific application will depend on the necessary load cycle.

#### Note:

For other technical requirements that have to be taken into consideration (surge loads, operation at low frequencies) please contact your Siemens partner in sales with the required specifications.

#### Global use

SINAMICS SM150 converters in the IGBT version are manufactured to international standards and regulations, making them ideally suited for global use.

#### Benefits

- Compact design and highly flexible configuration ensures easy plant integration
- Simple operator control and monitoring from the user-friendly operator panel
- Simple and reliable operation through integrated maintenance functions: The converter signals early on and automatically if maintenance is required or components need to be replaced
- High degree of ruggedness and reliability by using HV-IGBT technology and a fuseless design combined with intelligent response to external disturbances
- Can be easily integrated into automation solutions as the PROFIBUS interface is supplied as standard along with various analog and digital interfaces
- High level of service-friendliness through innovative power unit design with plug-in Powercards and easy access to all components
- By appropriately engineering the drive system, reactive power can be made available to other drives, therefore helping ensure that the plant or system is cost effective.

#### Design

Active Line Modules and Motor Modules have an almost identical design. HV-IGBT power semiconductors are used in both – they are mounted on plug-in power cards that are simple to replace.

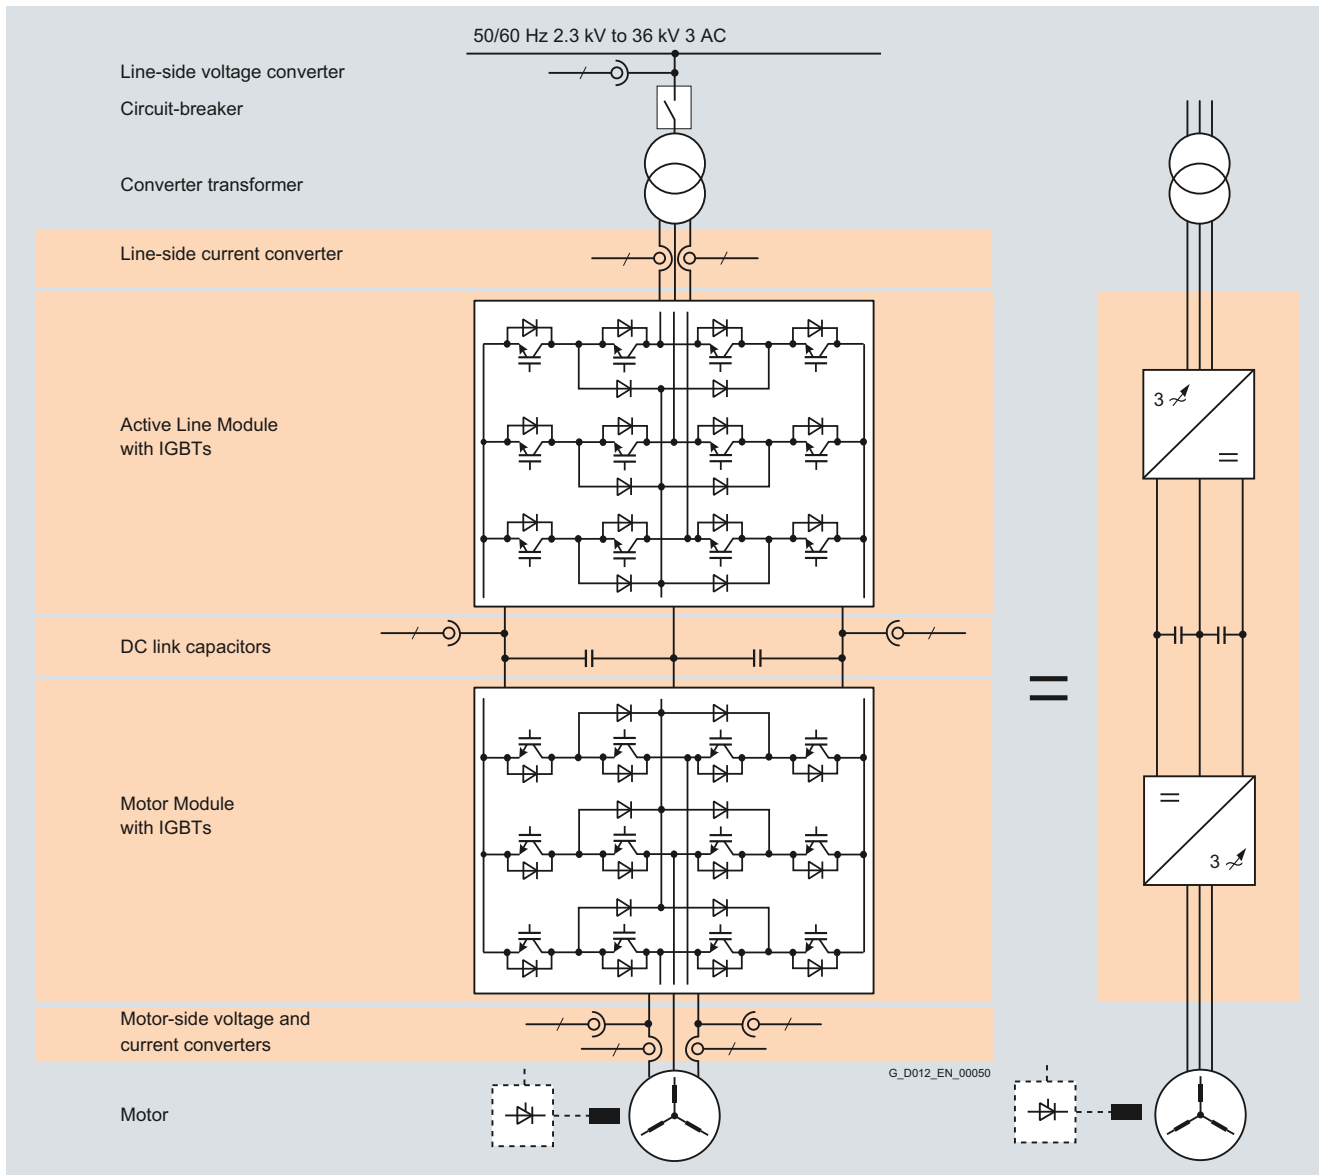

In the basic circuit, one Active Line Module and one Motor Module are interconnected via a DC link.

The converter consists of cabinet units for the Active Line Module and for the Motor Module. In the following diagram, one Powercard and the Control Unit are marked in the Motor Module.

| • Synchronous motor, separately excited, with brushless excitation system | On request                    |
| • Synchronous motor, permanently excited                                  | On request                    |

#### Software and protection functions

| SINAMICS SM150 in the IGBT version                 | Description   |
|--|---|
| <b>Closed-loop control</b>                         | <p>The motor-side closed-loop control is realized as a field-oriented closed-loop vector control that can be operated as a speed or torque control as required. The closed-loop vector control achieves the dynamic performance of a DC drive. This is made possible by the fact that the current components forming the torque and flux can be controlled precisely independently of each other. Prescribed torques can thus be observed and limited accurately. In the speed range from 1:10, the field-oriented closed-loop control does not require an actual speed value encoder.</p> <p>An actual speed value encoder is required in the following scenarios:</p> <ul style="list-style-type: none"> <li>• High dynamics requirements</li> <li>• Torque control/constant torque drives with a control range &gt; 1:10</li> <li>• Very low speeds</li> <li>• Very high speed accuracy</li> </ul> |
| <b>Setpoint input</b>                              | The setpoint can be defined internally or externally; internally as a fixed setpoint, motorized potentiometer setpoint or jog setpoint, externally via the PROFIBUS interface or an analog input of the customer's terminal strip. The internal fixed setpoint and the motorized potentiometer setpoint can be switched over or adjusted using control commands via all of the interfaces.  |
| <b>Ramp-function generator</b>                     | A user-friendly ramp-function generator with separately adjustable ramp-up and ramp-down times, together with variable smoothing times in the lower and upper speed ranges, improves the control response and therefore prevents mechanical overloading of the drive train. The ramp-down ramps can be parameterized separately for emergency stop.   |
| <b>V<sub>dc max</sub> controller</b>               | The V <sub>dc max</sub> controller automatically prevents overvoltages in the DC link if the down ramp is too short, for example. This can also extend the set ramp-down time.  |
| <b>Kinetic buffering (KIP)</b>                     | Power supply failures are bridged to the extent permitted by the kinetic energy of the drive train. The speed drops depending on the moment of inertia and the load torque. The current speed setpoint is resumed when the power supply returns.  |
| <b>Automatic restart</b>                           | The automatic restart switches the drive on again when the power is restored after a power failure or a general fault, and ramps up to the current speed setpoint.  |
| <b>Flying restart</b>                              | The flying restart function permits smooth connection of the converter to a rotating motor.   |
| <b>Diagnostics functions</b>                       | <ul style="list-style-type: none"> <li>• Self-diagnosis of control hardware</li> <li>• Non-volatile memory for reliable diagnosis when the power supply fails</li> <li>• Monitoring of HV-IGBTs with individual messages for each mounting location</li> <li>• User-friendly on-site operator panel with plain text messages</li> </ul>   |
| <b>Operating hours and switching cycle counter</b> | The operating hours of the non-redundant fans, which are located on the roof section of the cabinets, are detected and logged so that preventive maintenance can be performed or equipment replaced as a preventive measure. The switching cycles of the circuit breaker are recorded and added together, to form the basis of preventive maintenance work.   |

# SINAMICS SM150

## Medium-Voltage Converter

### SINAMICS SM150 in IGBT version

#### Function

| SINAMICS SM150 in the IGBT version      | Description   |
|---|---|
| <b>Detecting the motor actual speed</b> | The SMC30 encoder module can be used to record the actual motor speed. The signals from the rotary pulse encoder are converted here and made available for evaluation to the closed-loop controller via the DRIVE-CLIQ interface.   |
| <b>Operator protection</b>              | The cabinet doors of the power units are fitted with electromagnetic locks. This prevents the cabinet doors being opened while hazardous voltages are connected inside the cabinet.   |
| <b>EMERGENCY-OFF button</b>             | The converters are equipped as standard with an EMERGENCY-OFF button with protective collar which is fitted in the cabinet door. The contacts of the button are connected in parallel to the terminal strip so they can be integrated in a protection concept on the plant side. EMERGENCY-OFF stop category 0 is set as standard for an uncontrolled shutdown (EN 60204-1/VDE 0113-1 (IEC 60204-1)). The function includes voltage disconnection of the converter output through the circuit breaker. The motor coasts in the process.<br>The control of the "Safe Torque Off" function is optionally available (option <b>K80</b> ).  |
| <b>Insulation monitoring</b>            | The converters feature insulation monitoring of the complete electrical circuit from the secondary side of the transformer to the stator windings of the motor.   |
| <b>Monitoring of the peripherals</b>    | An extensive package of options for I/O monitoring (from the transformer and the motor through to the auxiliaries) is available.<br>In addition it is possible to monitor the temperature with thermocouples or Pt100 resistors.  |
| <b>Thermal overload protection</b>      | An alarm message is issued first when the overtemperature threshold is reached. If the temperature rises further, either a shutdown is carried out or automatic influencing of the output current so that a reduction in the thermal load is achieved. Following elimination of the cause of the fault (e.g. improvement in the ventilation), the original operating values are automatically resumed.<br>For instance, for air-cooled converters and when filter mats are used, the amount of pollution of the filter mats is monitored by measuring the differential pressure which is then signaled. In the case of water-cooled converters, the water temperature and flow rate are recorded at several points in the cooling circuit and evaluated. An extensive self-diagnosis protects the converter and reports faults. |
| <b>Grounding switch (option)</b>        | If grounding on the infeed or motor side is required for safety and protection reasons, a motorized grounding switch can be ordered.<br>For safety reasons, the converter controller locks these grounding switches against activation while voltage is still present. The control is integrated into the protection and monitoring chain of the converter. The grounding switches are inserted automatically when the standard grounding switches of the DC link are inserted.   |

#### SIMATIC OP 177B operator panel

The SIMATIC OP 177B operator panel is fitted into the cabinet door of the SINAMICS SM150 to enable operation, monitoring and commissioning.

It has the following features and characteristics:

- 5.7" STN touch display
- Context-dependent operations by touch, permanently available functions can be selected using individual keys
- Non-volatile message buffer, no battery

English and German are available as operator panel languages.

### SINAMICS SM150 in IGBT version

#### Options

When ordering a converter with options, add "-Z" to the order number of the converter, followed by the order code(s) for the desired option(s).

Example:

6SL3810-7NN36-0AA0-Z  
+G63+L08+...

In the following tables, related options are arranged in groups. Whether the options can be combined or are mutually exclusive is indicated within these groups. A detailed description of the options can be found in Chapter 6.

| Output-side options                               |     | L08 | L52 | L72 | Y73 |
|---|-----|-----|-----|-----|-----|

Note:

The values specified under storage and transport apply to suitably packed converters.

### Technical specifications

#### Derating for special installation conditions

##### Current derating

If the converters are operated at installation altitudes from 1000 m above sea level or at ambient/coolant temperatures > 40 °C for air cooling or with intake temperatures in the cooling unit > 35 °, derating factors  $k_H$  or  $k_T$  must be taken into account for the rated current (DIN 43671). For the permitted continuous current  $I$ :

$$I \leq I_N \times k_H \times k_T$$

$I$  permitted continuous current

$I_N$  rated current

##### Current derating as a function of the installation altitude (air cooling)

Derating factor  $k_H$  for air cooling

##### Current derating as a function of the installation altitude (water cooling)

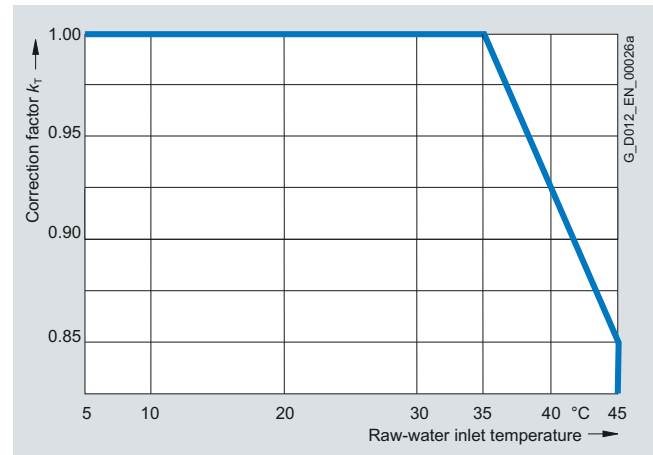

Derating factor  $k_H$  for water cooling

##### Current derating as a function of ambient temperature

Derating factor  $k_T$  (ambient temperature)

##### Current derating as a function of the raw water intake temperature

Derating factor  $k_T$  (raw water intake temperature)

##### Voltage derating

For installation altitudes >2000 m, acc. to EN 60664-1/VDE 0110 (IEC 60664-1) in addition to a current derating, a voltage derating is also required. This depends on the air and creepage distances in the unit.

##### Voltage derating as a function of installation altitude

Derating factor  $k_U$

##### Example

Derating data SINAMICS SM150 in IGBT version (water-cooled converter)

|                                      |                    |
|--------------------------------------|--------------------|
| Drive unit                           | 6SL3815-7NN38-0AA0 |
| Output voltage                       | 3.3 kV             |
| Input voltage                        | 3.3 kV             |
| Type rating                          | 4600 kVA, 800 A    |
| Installation altitude                | 2000 m             |
| Raw water intake temperature         | 40 °C              |
| $k_H$ (water cooling)                | 0.925              |
| $k_T$ (raw water intake temperature) | 0.925              |
| $k_U$                                | 1.0                |

For the current, the following applies:

$$I \leq I_N \times 0.925 \times 0.925 = I_N \times 0.856$$

A current derating of 14.4 % is required.

The maximum available output current is 685 A.

<sup>1)</sup> The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with synchronous motors for a power factor  $\cos \varphi = 1$  and a motor efficiency of 96 %. The calculation is based on the rated output current. The rated input current also depends on the line power factor, for which a typical value of 1 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 50. Both approximate values need to be adapted to the motor which is actually used.

<sup>2)</sup> Without cooling system.

<sup>3)</sup> The typical current drawn (rms value;  $\cos \varphi_{typ.} = 0.6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.

When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnector at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnector. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnectors are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!

<sup>4)</sup> Additional 20 A precharging current for 25 s.

<sup>5)</sup> Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit version, Page 4/4](#).

<sup>6)</sup> The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).

<sup>7)</sup> The specified dimensions and weights include doors and panels, however no options.

#### Overview

SINAMICS SM150 in the IGCT version

Water-cooled, regenerative feedback SINAMICS SM150 converters in the IGCT version are available as single or multi-motor drives with the well-proven medium-voltage IGCT power semiconductors. With multi-motor drives, a common DC bus enables the direct exchange of energy in generator and motor applications.

IGCT converters are available for the following voltage and outputs:

| Rated output voltage | Max. type rating   |
|----------------------|--|
| 3.3 kV               | 10.5 MVA, 21 MVA, 31.5 MVA<br>(for a single circuit configuration, double or triple parallel circuit configurations) |

The rated power in the specific application will depend on the necessary load cycle.

#### Note:

For other technical requirements that have to be taken into consideration (surge loads, operation at low frequencies, possibly necessary derating for parallel circuit configurations, limits regarding the maximum permissible short-circuit current) please contact your Siemens sales partner indicating the required specifications.

#### Global use

SINAMICS SM150 converters in the IGCT version are manufactured to international standards and regulations, making them ideally suited for global use. These converters are also available in ship-going form (meeting the requirements of all major classification organizations).

#### Benefits

- Compact design and highly flexible configuration ensures easy plant integration
- Simple operator control and monitoring from the user-friendly operator panel
- Simple and reliable operation through integrated maintenance functions: The converter signals early on and automatically if maintenance is required or components need to be replaced
- High degree of ruggedness and reliability due to the use of IGCT power semiconductors in the high power range and fuseless design combined with an intelligent response to external disturbances
- Can be easily integrated into automation solutions as the PROFIBUS interface is supplied as standard along with various analog and digital interfaces
- High level of service-friendliness through innovative power unit design with compact phase modules and easy access to all components
- By appropriately engineering the drive system, reactive power can be made available to other drives, therefore helping ensure that the plant or system is cost effective.

#### Design

Active Line Modules and Motor Modules share an almost identical structure with both the single-motor and the multi-motor drive. Phase modules in which IGCTs, diodes etc. are grouped together in one compact system are used in both.

#### Single-motor drive

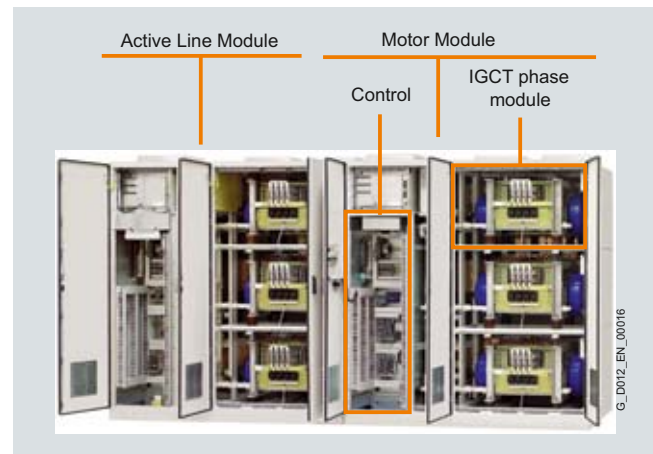

With a single-motor drive in the basic circuit, one Active Line Module and one Motor Module are connected via a DC link.

For greater output ratings, two or three complete converter units with isolated DC links are operated in parallel.

#### Multi-motor drive

With multi-motor drives, up to six power units are operated on the common DC bus. In addition to the Active Line Module, four Motor Modules with four motors can be operated on the common DC bus where energy can be directly exchanged. In this case, configurations are also possible with two Active Line Modules.

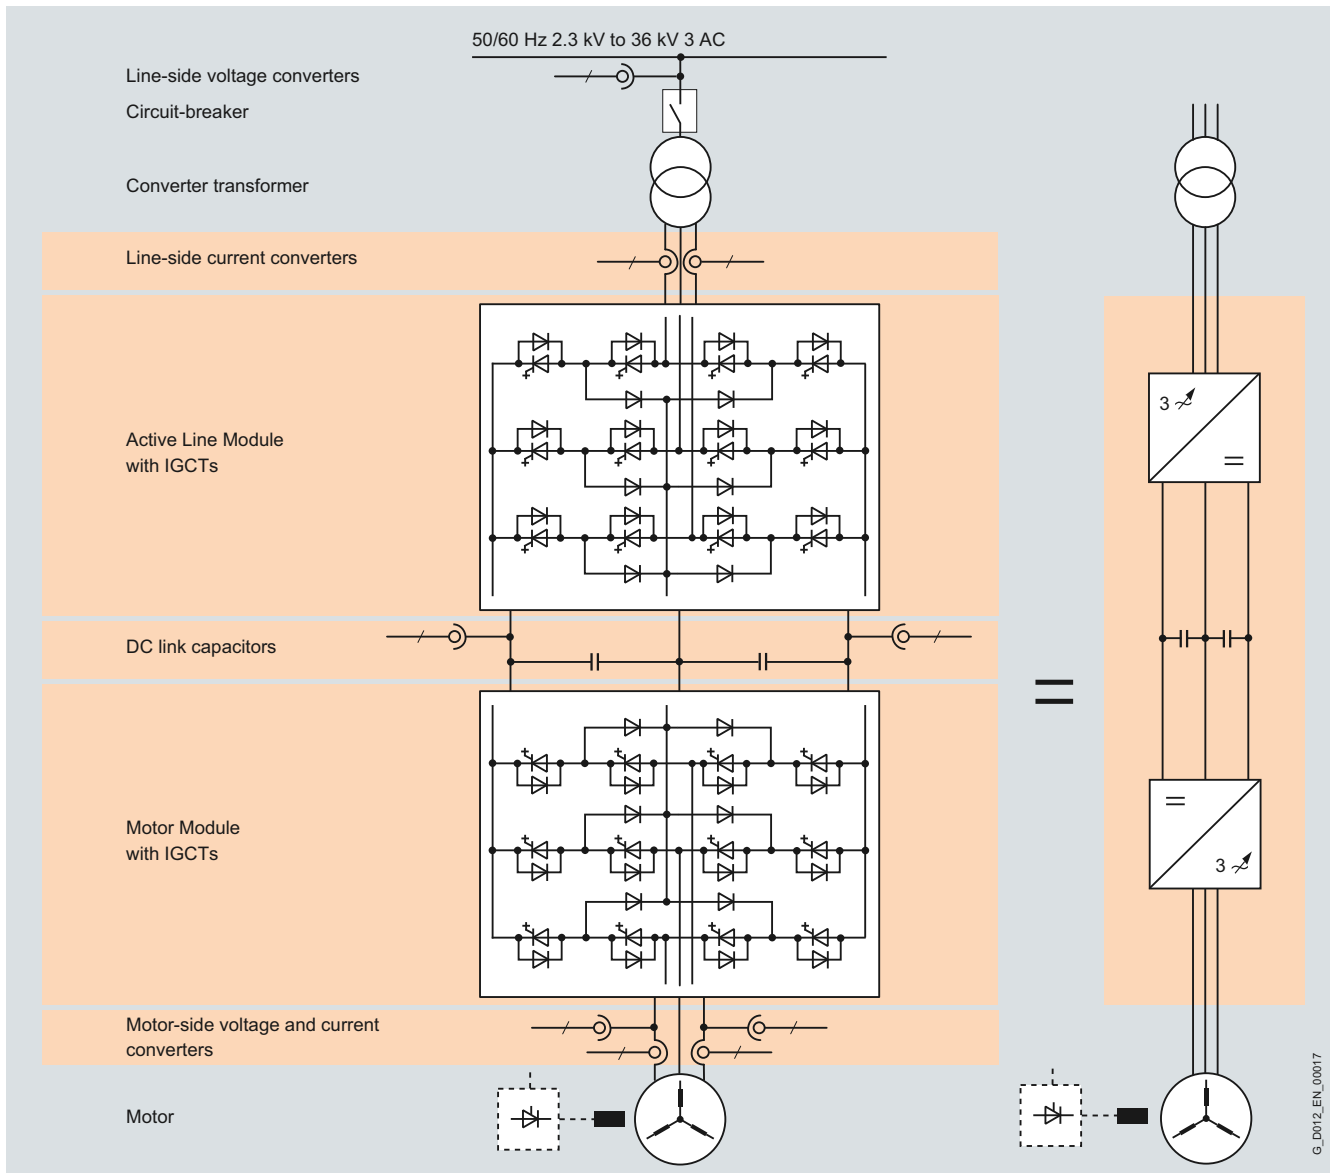

The converter consists of cabinet units for the Active Line Module and for the Motor Module. One of three phase modules and the control section in the Motor Module cabinet unit are highlighted in the illustration.

## Medium-Voltage Converter

SINAMICS SM150 in IGCT version

### Design

DC bus configuration with two Active Line Modules and three motors on a common DC link

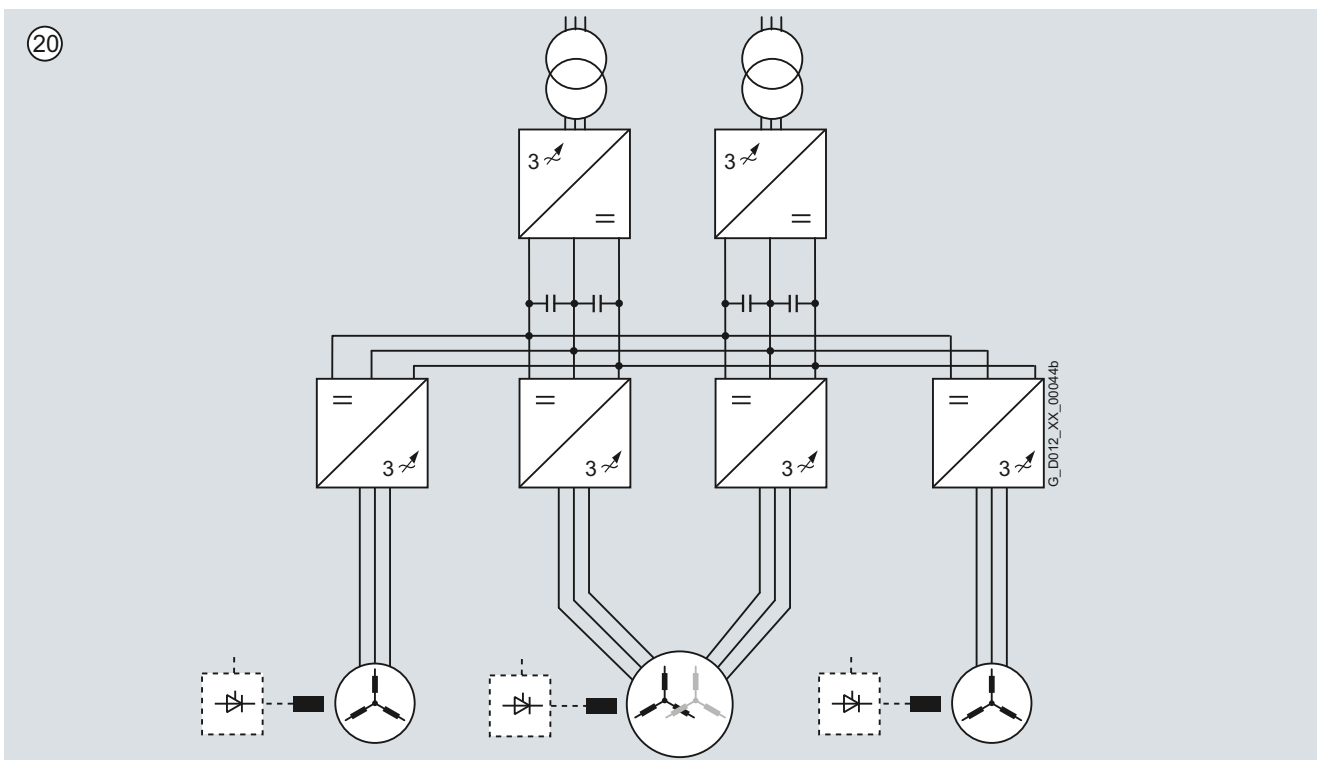

DC bus configuration with two Active Line Modules and four motors on a common DC link

## Design

DC bus configuration with two Active Line Modules and five motors on a common DC link

DC bus configuration with two Active Line Modules and three motors on a common DC link (2 × 10 MVA, 1 × 20 MVA)

For the DC bus configurations with two or more motors, energy can be exchanged along the common DC link between drives that are either motoring or regenerating. This results in savings in the Active Line Module, the transformers and the circuit breakers. These configurations are used mainly for single-stand cold rolling mills with a coiler and for transmission test stands.

| • Synchronous motor, separately excited, with brushless excitation system   | On request                    |
| • Synchronous motor, permanently excited                                    | Option                        |
| <b>DC bus configuration with several Motor Modules on one common DC bus</b> | Standard                      |

##### Software and protection functions

| SINAMICS SM150 in the IGCT version                 | Description   |
|--|---|
| <b>Closed-loop control</b>                         | <p>The motor-side closed-loop control is realized as a field-oriented closed-loop vector control that can be operated as a speed or torque control as required. The closed-loop vector control achieves the dynamic performance of a DC drive. This is made possible by the fact that the current components forming the torque and flux can be controlled precisely independently of each other. Prescribed torques can thus be observed and limited accurately. In the speed range from 1:10, the field-oriented closed-loop control does not require an actual speed value encoder.</p> <p>An actual speed value encoder is required in the following scenarios:</p> <ul style="list-style-type: none"> <li>• High dynamics requirements</li> <li>• Torque control/constant torque drives with a control range &gt; 1:10</li> <li>• Very low speeds</li> <li>• Very high speed accuracy</li> </ul> |
| <b>Setpoint input</b>                              | The setpoint can be defined internally or externally; internally as a fixed setpoint, motorized potentiometer setpoint or jog setpoint, externally via the PROFIBUS interface or an analog input of the customer's terminal strip. The internal fixed setpoint and the motorized potentiometer setpoint can be switched over or adjusted using control commands via all interfaces.   |
| <b>Ramp-function generator</b>                     | A user-friendly ramp-function generator with separately adjustable ramp-up and ramp-down times, together with variable smoothing times in the lower and upper speed ranges, improves the control response and therefore prevents mechanical overloading of the drive train. The ramp-down ramps can be parameterized separately for emergency stop.   |
| <b>V<sub>dc max</sub> controller</b>               | The V <sub>dc max</sub> controller automatically prevents overvoltages in the DC link if the down ramp is too short, for example. This can also extend the set ramp-down time.  |
| <b>Kinetic buffering (KIP)</b>                     | Power supply failures are bridged to the extent permitted by the kinetic energy of the drive train. The speed drops depending on the moment of inertia and the load torque. The current speed setpoint is resumed when the power supply returns.  |
| <b>Automatic restart</b>                           | The automatic restart switches the drive on again when the power is restored after a power failure or a general fault, and ramps up to the current speed setpoint.  |
| <b>Flying restart</b>                              | The flying restart function permits smooth connection of the converter to a rotating motor.   |
| <b>Diagnostics functions</b>                       | <ul style="list-style-type: none"> <li>• Self-diagnosis of control hardware</li> <li>• Non-volatile memory for reliable diagnosis when the power supply fails</li> <li>• Monitoring the IGCTs with individual messages for each mounting location</li> <li>• User-friendly on-site operator panel with plain text messages</li> </ul>   |
| <b>Operating hours and switching cycle counter</b> | The switching cycles of the circuit breakers are detected and summed to form the basis for preventive maintenance work.   |
| <b>Operator protection</b>                         | The cabinet doors of the power units are fitted with electromagnetic locks. This prevents the cabinet doors being opened while hazardous voltages are connected inside the cabinet.   |

### Function

| SINAMICS SM150 in the IGCT version   | Description  |
|--------------------------------------|--|
| <b>EMERGENCY-OFF button</b>          | The converters are equipped as standard with an EMERGENCY-OFF button with protective collar which is fitted in the cabinet door. The contacts of the button are connected in parallel to the terminal strip so they can be integrated in a protection concept on the plant side. EMERGENCY-OFF stop category 0 is set as standard for an uncontrolled shutdown (DIN EN 60204-1/VDE 0113-1 (IEC 60204-1)). The function includes voltage disconnection of the converter output through the circuit breaker. The motor coasts in the process.<br>The control of the "Safe Torque Off" function is optionally available (option <b>K80</b> ). |
| <b>Insulation monitoring</b>         | The converters feature insulation monitoring of the complete electrical circuit from the secondary side of the transformer to the stator windings of the motor.  |
| <b>Monitoring of the peripherals</b> | An extensive package of options for I/O monitoring (from the transformer and the motor through to the auxiliaries) is available.<br>In addition it is possible to monitor the temperature with thermocouples or Pt100 resistors.   |
| <b>Thermal overload protection</b>   | An alarm message is issued first when the overtemperature threshold is reached. If the temperature rises further, either a shutdown is carried out or automatic influencing of the output current so that a reduction in the thermal load is achieved. Following elimination of the cause of the fault (e.g. improvement in the ventilation), the original operating values are automatically resumed.<br>In the case of water-cooled converters, the water temperature and flow rate are recorded at several points in the cooling circuit and evaluated. An extensive self-diagnosis protects the converter and reports faults.          |
| <b>Grounding switch (option)</b>     | If grounding on the infeed or motor side is required for safety and protection reasons, a motorized grounding switch can be ordered.<br>For safety reasons, the converter controller locks these grounding switches against activation while voltage is still present. The control is integrated into the protection and monitoring chain of the converter. The grounding switches are inserted automatically when the standard grounding switches of the DC link are inserted.  |

### SIMATIC OP 177B operator panel

The SIMATIC OP 177B operator panel is fitted into the cabinet door of the SINAMICS SM150 to enable operation, monitoring and commissioning.

It has the following features and characteristics:

- 5.7" STN touch display
- Context-dependent operations by touch, permanently available functions can be selected using individual keys
- Non-volatile message buffer, no battery

English and German are available as operator panel languages.

#### Note:

For other technical requirements that have to be taken into consideration (surge loads, operation at low frequencies, possibly necessary derating for parallel circuit configurations, limits regarding the maximum permissible short-circuit current) please contact your Siemens sales partner indicating the required specifications.

<sup>1)</sup> The underlying circuits are based on a drive line-up in which the drives operate both as motor and generator. Energy is exchanged via the DC link. The specified power corresponds to the maximum infeed power. The effective total power of the Motor Modules (taking into account the power flow direction) may not exceed this infeed power.

### Options

When ordering a converter with options, add "-Z" to the order number of the converter, followed by the order code(s) for the desired option(s).

Example:

6SL3845-1NN41-8AA0-Z  
+N06+M10+...

In the following tables, related options are arranged in groups. Whether the options can be combined or are mutually exclusive is indicated within these groups. A detailed description of the options can be found in Chapter 6.

| Input-side options                                  |            |

Note:

The values specified under storage and transport apply to suitably packed converters.

### Technical specifications

#### Derating for special installation conditions

##### Current derating

If the converters are operated at installation altitudes above 1000 m above sea level or at deionized water temperatures > 40 °C or raw water temperatures > 35 °, derating factors  $k_H$  or  $k_T$  must be taken into account for the rated output current (DIN 43671). For the permitted continuous current  $I$ :

$$I \leq I_N \times k_H \times k_T$$

$I$  permitted continuous current

$I_N$  rated current

##### Current derating as a function of the installation altitude (water cooling)

Derating factor  $k_H$  for water cooling

##### Current derating as a function of the raw water intake temperature

Derating factor  $k_T$  (raw water intake temperature)

#### Voltage derating

For installation altitudes >2000 m, acc. to EN 60664-1/VDE 0110 (IEC 60664-1) in addition to a current derating, a voltage derating is also required. This depends on the air and creepage distances in the unit.

##### Voltage derating as a function of installation altitude

Derating factor  $k_U$

#### Example

##### Derating data SINAMICS SM150 in IGCT version

|                                      |                    |
|--------------------------------------|--------------------|
| Drive unit                           | 6SL3845-7NN41-8AA0 |
| Output voltage                       | 3.3 kV             |
| Input voltage                        | 3.3 kV             |
| Type rating                          | 10000 kVA, 1750 A  |
| Installation altitude                | 2000 m             |
| Raw water intake temperature         | 40 °C              |
| $k_H$ (water cooling)                | 0.925              |
| $k_T$ (raw water intake temperature) | 0.925              |
| $k_U$                                | 1.0                |

For the current, the following applies:

$$I \leq I_N \times 0.925 \times 0.925 = I_N \times 0.856$$

A current derating of 14.4 % is required.

The maximum available output current is 1497 A.

Note:

For other technical requirements that have to be taken into consideration (surge loads, operation at low frequencies, possibly necessary derating for parallel circuit configurations) please contact your Siemens sales partner indicating the required specifications. Additional DC bus configurations are available on request.

Footnotes see page 5/23.

#### Note:

For other technical requirements that have to be taken into consideration (surge loads, operation at low frequencies, possibly necessary derating for parallel circuit configurations) please contact your Siemens sales partner indicating the required specifications. Additional DC bus configurations are available on request.

## Technical specifications

- 1) The data for the rated input current and the power data in hp and kW are approximate values only; these have been calculated for operation with synchronous motors for a power factor  $\cos \phi = 1$  and a motor efficiency of 96%. The calculation is based on the rated output current. The rated input current also depends on the line power factor, for which a typical value of 1 was assumed.

The hp data are based on the NEC and CEC guidelines for the North American market. The kW values are specified in multiples of 500. Both approximate values need to be adapted to the motor which is actually used.

- 2) The underlying circuits are based on a drive line-up in which the drives operate both as motor and generator. Energy is exchanged via the DC link. The specified power corresponds to the maximum infeed power. The effective total power of the Motor Modules (taking into account the power flow direction) may not exceed this infeed power.
- 3) Approx. 5 % of the power loss is dissipated in the room.
- 4) Without cooling system
- 5) The typical current drawn (rms value;  $\cos \phi_{\text{typ.}} = 0,6$ ) of the supply for the converter open-loop/closed-loop control is specified. The separate supplies for the socket outlets/light or switched auxiliary power feeders (options **N35 to N38**) have not been taken into account. Values for the typical current drawn for special configurations (e.g. for dimensioning an upstream UPS) are available on request.
- When using options **L48** (make-proof grounding switch at the converter input), **L49** (make-proof grounding switch at the converter output) or **L51** (disconnector at the converter output), it should further be taken into account that for switching operations, additional peak values of up to 10 A can occur for each make-proof grounding switch or disconnector. This corresponds to the starting current of a motor used to operate a switch, which decays from approx. 10 A to approx. 2 A in 200 ms. A switching operation takes a total time of approx. 2 s. All optionally used make-proof grounding switches or disconnectors are controlled via the manually-actuated make-proof grounding switch for the converter DC link (standard) and therefore switch simultaneously!
- 6) Data refer to a sub-system; for details about the number of sub-systems to be connected on the line or motor side, see [Circuit versions, Pages 5/4 and 5/5](#).
- 7) The maximum permissible cable lengths must be observed (see [Power cables, Page 9/13](#)).
- 8) The specified dimensions and weights include doors, panels and cooling unit, however no options.
- 9) Depending on the pressure equalization tank, the cooling unit can have a maximum cabinet height of 2790 mm.

| 6/39 | Options N20 to N33                              |
| 6/40 | Options N35 to N38, Q80 to Q85, S05, T58 to T91 |
| 6/41 | Options W02 to W20, Y05 to Y10                  |
| 6/42 | Options Y15 to Y73                              |

# Description of options

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Overview

The following tables contain a complete overview of the availability of options for the four converter versions, SINAMICS GM150 and SINAMICS SM150 in the IGBT and IGCT versions.

Information on the possibility of combining various options can be taken from the matrices in Chapters 2, 3, 4 and 5.

| Order code | Option   | SINAMICS GM150 |              | SINAMICS SM150 |              |
|------------|--|----------------|--------------|----------------|--------------|
|            |  | IGBT version   | IGCT version | IGBT version   | IGCT version |

# Description of options

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Options

To enable the required description to be found more easily, the following option descriptions are sorted alphabetically by order codes. If an option is only available for certain converter configurations, this is indicated in brackets after the option title.

##### Note:

An option can only be ordered once per converter, if not explicitly specified otherwise.

##### Note:

The "on request" comment can have the following meanings:

- The price has not been defined and must be determined after an inquiry has been sent to the factory before a quotation can be generated.
- The option requires technical clarification and – depending on secondary technical conditions – may not be able to be realized for all types.

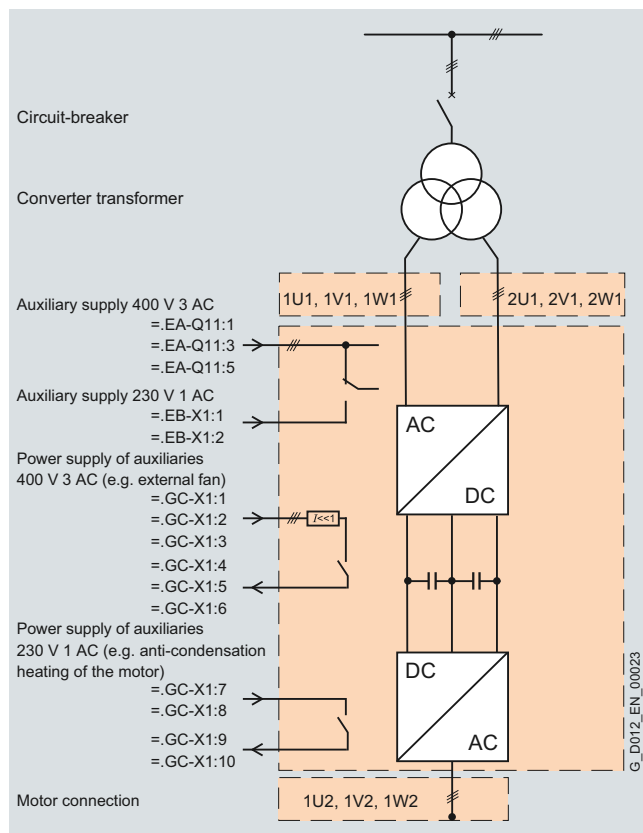

#### B00

##### NAMUR terminal strip

The terminal strip has been configured in accordance with the requirements and guidelines of the Standards Working Group for Instrumentation and Control in the Chemical Industry (NAMUR Recommendation NE37), i.e. fixed terminals are assigned to certain functions of the devices. The inputs and outputs assigned to the terminals comply with "Protective extra-low voltage PELV" requirements.

For temperature monitoring of explosion-protected motors, options for PTC thermistors with PTB approval and Pt100 evaluation units for use in hazardous areas are available.

This terminal strip and the associated functions are reduced to the required amount. Contrary to the NAMUR recommendation, no additional terminals are included.

##### Assignment of the NAMUR terminal strip

| Terminal  | No. | Type              | Preassignment                             | Comment   |
|---|-----|-------------------|---|---|
| <b>For signal lines that must meet "Protective extra-low voltage PELV" requirements</b> |     |                   |   |   |
| <b>= LC-X2</b>  | 1   | M                 | Reference conductor to the 24 V DC infeed | –   |
|   | 1.0 |                   |   |   |
|   | 1.1 |                   |   |   |
|   | 3   | P24               | 24 V DC infeed                            | Protected internally with 2 A fuse  |
|   | 3.0 |                   |   |   |
|   | 3.1 |                   |   |   |
|   | 10  | DI                | ON (dynamic)/ON/OFF(static)               | –   |
|   | 11  | DI                | OFF (dynamic)                             | –   |
|   | 12  | DI                | Faster                                    | –   |
|   | 13  | DI                | Slower                                    | –   |
|   | 14  | DI                | RESET                                     | –   |
|   | 15  | DI                | Interlock                                 | Corresponds to OFF3   |
|   | 16  | DI                | Counterclockwise                          | "0" signal for CW phase sequence<br>"1" signal for CCW phase sequence     |
|   | 17  |                   | PS disconnection                          | EMERGENCY STOP sequence   |
|   | 18  |                   |   |   |
|   | 30  |                   | Ready to run                              | Relay output (NO contact)   |

|   | 32  |                   | Motor rotates                             | Relay output (NO contact)   |
|   | 33  |                   |   |   |
|   | 34  | DO (NO)           | Fault                                     | Relay output (changeover contact)   |
|   | 35  | DO (COM)          |   |   |
|   | 36  | DO (NC)           |   |   |
|   | 50  | AI 0/4 ... 20 mA  | Speed setpoint                            | –   |
|   | 51  |                   |   |   |
|   | 60  | AO 0/4 ... 2 0 mA | Motor frequency                           | –   |
|   | 61  |                   |   |   |
|   | 62  | AO 0/4 ... 2 0 mA | Motor current                             | Preassigned with motor current/can be reparameterized for other variables |
|   | 63  |                   |   |   |

##### For connecting the PTC sensor of the motor

|               |       |    |                            |                                      |
|---------------|-------|----|----------------------------|--------------------------------------|
| <b>-A1-X3</b> | 90/91 | AI | Connection of a PTC sensor | Shutdown if limit value is exceeded. |
|---------------|-------|----|----------------------------|--------------------------------------|

If Pt100 resistance thermometers are integrated into the windings of the motor in order to protect the motor, Pt100 evaluation units for explosion-protected motors are available with options **L95** and **L96**.

If a force-ventilated motor is used due to the application (load torque/control range), controlled outgoing feeders – protected using motor circuit breakers – are available with options **N30** to **N33** to supply an external fan. The incoming voltage supply for the external fan must be provided on the plant side.

Options **N35** to **N38** include a controlled and fused external voltage outgoing feeder for the anti-condensation heating in the motor.

# Description of options

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Options

##### B43 to B45

##### Production flowcharts:

Production flowcharts are provided with options **B43 to B45**. After the order has been clarified, these are sent as dual language (English/German) PDF file by E-Mail.

| Option     | Description  |
|------------|--|
| <b>B43</b> | Documentation, production flowchart: Generated once          |
| <b>B44</b> | Documentation, production flowchart: Updated every two weeks |
| <b>B45</b> | Documentation, production flowchart: Updated every month     |

##### C30 to C49

##### Auxiliary voltage other than N/400 V/3 AC (SINAMICS GM150, SINAMICS SM150 in IGBT version)

A N/400 V/3 AC auxiliary supply must be provided on the plant side to supply power for the fans, open-loop/closed-loop control, protection and monitoring systems as well as the DC link pre-charging. If the auxiliary supply in the plant differs from this value, you must select one of the options **C30 to C49**. In this case the three-phase infeed supply which differs from the standard version is adapted with three individual transformers to the required voltage level. Tappings from 200 V 3 AC to 690 V 3 AC are available for this purpose. The current required for the auxiliary infeed supply can be determined from the data for the current requirement at 400 V 3 AC (see [Technical Specifications, Conversion to Existing Auxiliary Voltage](#)).

Order codes for auxiliary voltages and line frequencies

|            |                  |
|------------|------------------|
| <b>C30</b> | 50 Hz 200 V 3 AC |
| <b>C33</b> | 60 Hz 220 V 3 AC |
| <b>C34</b> | 60 Hz 230 V 3 AC |
| <b>C35</b> | 60 Hz 240 V 3 AC |
| <b>C36</b> | 50 Hz 380 V 3 AC |
| <b>C37</b> | 60 Hz 380 V 3 AC |
| <b>C38</b> | 50 Hz 400 V 3 AC |
| <b>C39</b> | 50 Hz 415 V 3 AC |
| <b>C40</b> | 60 Hz 440 V 3 AC |
| <b>C41</b> | 60 Hz 460 V 3 AC |
| <b>C42</b> | 60 Hz 480 V 3 AC |
| <b>C43</b> | 50 Hz 500 V 3 AC |
| <b>C44</b> | 50 Hz 550 V 3 AC |
| <b>C46</b> | 60 Hz 575 V 3 AC |
| <b>C48</b> | 50 Hz 690 V 3 AC |
| <b>C49</b> | 60 Hz 690 V 3 AC |

##### Note:

A matching transformer is necessary if 50 Hz 400 V 3 AC is available on the plant side, however, without a neutral conductor connection. In this case, option **C38** should be selected.

Exception: A separate 230 V supply can be provided for the closed-loop control on the plant side.

##### Note:

For isolated systems the maximum supply voltage is 500 V 3 AC.

##### Note:

Access to the matching transformers is possible only from the rear of the converter.

| Auxiliary voltage infeed | Supply voltage for   |
|--------------------------|--|
| = EA-Q11:1 L1            | Fan, DC link precharging   |
| = EA-Q11:3 L2            |  |
| = EA-Q11:5 L3            |  |
| = EB-X1:1 L1             | Open-loop and closed-loop control, protection and monitoring equipment |
| = EB-X1:2 N              |  |

### Options

#### C55

#### Auxiliary voltage 120 V 1 AC for open-loop and closed-loop control (SINAMICS GM150, SINAMICS SM150 in IGBT version)

The open-loop control of the converter can be supplied with 120 V 1 AC with option **C55**.

#### Note:

The following options are available in conjunction with option **C55** on special request:

- **L48** and **L49** (grounding switch at converter input and output)
- **L51** (disconnecter at converter output)
- **L52** (circuit breaker at converter output)
- **N13** (circuit breaker at converter input)

#### D00 to D84

#### Documentation

The standard documentation is supplied in English on CD-ROM. The circuit diagrams/terminal diagrams are only available in English/German. Supplementary documentation for the components installed in the converter, which the manufacturers of these components provide, is supplied on the CD-ROM in English/German. For technical reasons, it is not possible to restrict the scope of this supplementary documentation to just the options that the customer has ordered.

| Option     | Description  |
|------------|--|
| <b>D00</b> | <b>Documentation in German</b><br>Use the code <b>D00</b> to obtain the documentation in German on CD-ROM.   |
| <b>D02</b> | <b>Circuit diagrams, terminal diagrams and dimension drawings in DXF format</b><br>Documents such as circuit diagrams, terminal diagrams, the arrangement diagram and the dimension drawing with the code <b>D02</b> are ordered in DXF format so that they can be processed in AutoCAD systems, for instance.   |
| <b>D15</b> | <b>One set of printed documentation (multiple orders possible)</b><br>If documentation is also required on paper, this must be ordered using the code <b>D15</b> .   |
| <b>D55</b> | <b>Documentation in Polish</b><br>With order code <b>D55</b> the documentation is supplied in Polish on CD-ROM.  |
| <b>D56</b> | <b>Documentation in Russian</b><br>Use the code <b>D56</b> to obtain the documentation in Russian on CD-ROM.   |
| <b>D57</b> | <b>Documentation in Japanese (on request)</b><br>With order code <b>D57</b> the documentation is supplied in Japanese on CD-ROM.   |
| <b>D72</b> | <b>Documentation in Italian (on request)</b><br>Use the code <b>D72</b> to obtain the documentation in Italian on CD-ROM.  |
| <b>D76</b> | <b>Documentation in English</b><br>If a documentation language other than English is selected using options <b>D00</b> or <b>D55 to D84</b> , then by specifying order code <b>D76</b> , an additional CD-ROM with documentation in English as second documentation language can be ordered.<br><u>Note:</u><br>When simultaneously selecting option <b>D15</b> (a set of printed documentation) the printed documentation is only supplied in the first documentation language. |
| <b>D77</b> | <b>Documentation in French</b><br>Use the code <b>D77</b> to obtain the documentation in French on CD-ROM.   |

# Description of options

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Options

##### E00

##### **Closed-loop control for separately-excited synchronous motors (static excitation unit is provided on the plant side)**

When option **E00** is selected, the converter is supplied without static excitation unit. The static excitation unit should be provided on the plant side.

##### E01

##### **Closed-loop control for separately excited synchronous motors with slipring excitation (for static excitation units, see Accessories, Chapter 7)**

If the converter is to be used to control separately excited synchronous motors with slipring excitation, put the code **E01** in the order. For slipring excitation, the exciter cabinet must also be ordered. It has its own order number.

##### Note:

Converter and exciter cabinet must be ordered together.

##### Note:

For SINAMICS GM150, option **E01** on request.

##### E02

##### **Closed-loop control for separately excited synchronous motors with brushless excitation (on request, for static excitation units, see Accessories, Chapter 7)**

If the converter is to be used to control separately excited synchronous motors with brushless excitation, order code **E02** must be specified when ordering. For brushless excitation, the exciter cabinet must also be ordered. It has its own order number.

##### E03

##### **Control for permanently-excited synchronous motors**

If the converter is to be used to control permanently-excited synchronous motors, order code **E03** must be included in the order.

##### Note:

Option **E03** requires that option **L52** is simultaneously ordered (circuit breaker at converter output).

##### Note:

For SINAMICS SM150 in IGBT version and SINAMICS GM150, option **E03** on request.

##### E11 to E71

##### **(SINAMICS GM150, water-cooled) Individual certification of the converter by the relevant certifying organizations, including the extensions described under option M66**

| Option     | Description  |
|------------|--|
| <b>E11</b> | <b>Suitable for marine use with individual certificate from Germanische Lloyd (GL)</b><br>includes option <b>M66</b>                   |
| <b>E21</b> | <b>Suitable for marine use with individual certificate from Lloyds Register (LR)</b><br>includes option <b>M66</b>                     |
| <b>E31</b> | <b>Suitable for marine use with individual certificate from Bureau Veritas (BV)</b><br>includes option <b>M66</b>                      |
| <b>E51</b> | <b>Suitable for marine use with individual certificate from Det Norske Veritas (DNV)</b><br>includes option <b>M66</b>                 |
| <b>E61</b> | <b>Suitable for marine use with individual certificate from the American Bureau of Shipping (ABS)</b><br>includes option <b>M66</b>    |
| <b>E71</b> | <b>Suitable for marine use with individual certificate from the Chinese Classification Society (CCS)</b><br>includes option <b>M66</b> |

##### Note:

It is not possible to combine several individual certificates.

##### Note:

For SINAMICS GM150 in IGBT version, the combination with option **Y15** (sine-wave filter) on request.

##### E82

##### **Increased frequency (converter for high-speed rotors, SINAMICS GM150 in IGBT version)**

When operated above 66 Hz, the converter should be classified as a converter for high-speed rotors.

##### E86

##### **Additional analog inputs (isolated)**

With option **E86** an additional TM31 Terminal Module is available. Its analog inputs are isolated. Multirange transformers are used (setting range: 0 V to 10 V; 0 mA to 20 mA or 4 mA to 20 mA).

##### Note:

Option **E86** cannot be combined with options **G62** (second additional TM31 Terminal Module), as well as **L94** and **L96** (2 Pt100 evaluation units).

### Options

#### E87

##### **Additional analog outputs (isolated)**

With option **E87** an additional TM31 Terminal Module is available. Its analog outputs are isolated. Multirange transformers are used (setting range: 0 V to 10 V; 0 mA to 20 mA or 4 mA to 20 mA).

##### Note:

Option **E87** cannot be combined with option **G62** (second additional TM31 Terminal Module).

#### **F03, F29, F73, F77, F79, F97**

##### **Converter acceptance inspections in presence of customer**

| Option     | Description   |
|------------|---|
| <b>F03</b> | <p><b>Visual acceptance</b></p> <p>The checks are carried out with the converter deenergized.</p> <p>The following is included in the scope of the acceptance tests:</p> <ul style="list-style-type: none"> <li>• Check of degree of protection</li> <li>• Check of equipment (components)</li> <li>• Check of equipment identifier</li> <li>• Check of clearance and creepage distances</li> <li>• Check of cables</li> <li>• Check of customer documentation</li> <li>• Submitting the acceptance report</li> </ul>   |
| <b>F29</b> | <p><b>Noise measurement under no-load conditions (SINAMICS GM150 and SINAMICS SM150 in an air-cooled IGBT version)</b></p> <p>With option <b>F29</b>, the sound pressure level of the converter is measured under no load conditions with the continuously operating fans switched on.</p>  |
| <b>F73</b> | <p><b>Functional acceptance of converter with inductive load <sup>1)</sup></b></p> <p>After the visual inspection with the converter off, the converter is connected to rated voltage. Rated current flows in an inductive load at an output frequency of 5 Hz (without connector motor) on the converter output side.</p> <p>The following is included in the scope of the acceptance tests:</p> <ul style="list-style-type: none"> <li>• Visual inspection as described for option <b>F03</b></li> <li>• Check of power supply</li> <li>• Check of protective and monitoring devices (simulation)</li> <li>• The fan is checked (for water cooling: cooling circuit elements in the converter)</li> <li>• Precharging test</li> <li>• Functional test with inductive load at rated voltage and rated current</li> <li>• Submitting the acceptance report</li> </ul> |
| <b>F77</b> | <p><b>Acceptance of the converter insulation test <sup>1)</sup></b></p> <p>The following is included in the scope of the acceptance tests:</p> <ul style="list-style-type: none"> <li>• High-voltage test</li> <li>• Measurement of insulation resistance</li> </ul> <p>Option <b>F77</b> can only be ordered in connection with options <b>F73</b>.</p>  |
| <b>F79</b> | <p><b>Test of the interface between the converter and customer equipment (5 hours) <sup>1)</sup></b></p> <p>The analog, digital and serial interfaces are tested according to their preassignment described in Chapter 8. For additional test requirements, option <b>F97</b> must be selected.</p> <p>Option <b>F79</b> can only be ordered in connection with option <b>F73</b>.</p>  |

<sup>1)</sup> As a result of the local situation and the dimensions of the converter, the acceptance is always performed using a basic unit comprising a Line Module and a Motor Module.

# Description of options

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Options

| Option     | Description  |
|------------|--|
| <b>F97</b> | <p><b>Customer-specific system acceptance tests (on request)</b></p> <p>For a system acceptance test, transformer (if technically required), converter, cooling system (if technically required) and motor should be set up and commissioned. Converter, cooling system and transformer are mounted directly next to each other, but separately from the motor.</p> <p>Only already pre-tested components (together with a test certificate) are subject to a system test.</p> <p>The tests that can be performed in the System Test Center are listed in the following. For each system acceptance test, the actual test scope must first be coordinated with the Siemens contact person.</p> <p><u>Temperature-rise test</u></p> <p>Full load test run or partial load test run of the motor in converter operation until the temperature reaches its steady-state level. The operating point should be preferably selected where the highest temperature increase is expected (<math>M_N, n_N</math>). The resistance method is the basis for determining the temperature rise. During the temperature-rise test, in addition to the motor temperatures, the electrical operating parameters of the complete drive system are also continuously recorded.</p> <p><u>Load tests</u></p> <ul style="list-style-type: none"> <li>• Load points at four different operating points</li> <li>• The system efficiency is determined at the defined load points</li> <li>• Line-side harmonics analysis</li> </ul> <p><u>Additional tests</u></p> <ul style="list-style-type: none"> <li>• High-voltage insulation test:<br/>The converter and motor have already been tested as part of the routine tests performed during production. Re-testing the converter is time-consuming and is not recommended. It can only be performed as part of a test that is separately performed for options <b>F73/F77</b>.</li> <li>• Converter function test:<br/>The fault and alarm functions are checked using defined simulation routines (e.g. overtemperature trip, EMERGENCY-STOP, overcurrent, overspeed, undervoltage)</li> <li>• 120 % overspeed test</li> <li>• Noise measurement (motor fed from the converter without load)</li> <li>• Vibration measurement (motor fed from the converter without load)</li> <li>• Visual inspection (converter and motor and where relevant, transformer)</li> </ul> |

#### Note:

An acceptance test of static excitation units according to options **F03**, **F73** and **F77** is only possible together with the converter which must be ordered simultaneously.

In general, a high voltage test of the converter is already performed during the type test. When the test is repeated as part of option **F77**, the test voltage is reduced to 80 % (according to DIN EN 61800-5-1/VDE 0160 T105 (IEC 61800-5-1)).

Excitation units are only accepted as part of option **F97** when this option is simultaneously selected for the converter and excitation unit and is generally performed at another location and at another time.

#### **F28, F72, F76**

##### **Converter acceptance tests without the customer present**

The acceptance scope of these options corresponds to that of options **F29**, **F73** or **F77**, however, without the customer being present.

### Options

#### G20 to G24 and G34

##### Access to other bus systems

In the standard version the SINAMICS GM150 and SINAMICS SM150 are equipped with a PROFIBUS interface (slave). Additional interface modules are optionally available.

| Option   | Description                    |
|--|--------------------------------|
| <b>For SINAMICS GM150 (on request)</b>                 |                                |
| <b>G20</b>   | CAN bus interface (CANopen)    |
| <b>G21</b>   | Modbus Plus interface          |
| <b>G22</b>   | Modbus RTU slave interface     |
| <b>G23</b>   | DeviceNet interface            |
| <b>G24</b>   | PROFINET interface (via CBE20) |
| <b>For SINAMICS SM150 in IGCT version (on request)</b> |                                |
| <b>G34</b>   | PROFINET interface (via CBE30) |

The SINAMICS Communication Boards CBC10 or CBE20 (option **G24** for SINAMICS GM150) and CBE30 (option **G34** for SINAMICS SM150) are used to connect to the CANopen bus system (option **G20**) or to PROFINET.

The "Anybus-X-Gateway" from the HMS Industrial Networks company is used to connect to third-party Modbus Plus systems (option **G21**), Modbus RTU (option **G22**) and DeviceNet (option **G23**).

When one of the options **G21 to G23** is ordered, the Anybus-X-Gateway is installed when the equipment is delivered and is connected to the CU320 Control Unit via a PROFIBUS cable. The scope of supply includes a null modem cable to configure the Anybus-X-Gateway. The Anybus-X-Gateway is preconfigured to 20 bytes of I/O data. The data size can be changed via the configuration interface from a PG/PC (standard PC tool "Windows Hyper Terminal").

The "NetTool" supplied by HMS Industrial Networks must be used to configure the PROFIBUS. This is not included in the scope of supply.

Current information, documentation and tools for Anybus-X-Gateway are available at <http://www.anybus.de>

#### G25, G35

##### TeleService connection TS Adapter II analog modem, ISDN modem (SINAMICS GM150 in the IGBT version)

Using the TeleService connection, personnel in the central service department can perform all operator functions and settings with the STARTER software and provide support when service is required.

An appropriate modem is required for the TeleService connection. This permits communications to be established between the PROFIBUS inside the drive unit and a telephone cable to a central service department. This modem, with PROFIBUS connection, is integrated in a SIMATIC TS Adapter II, which is available in an analog (option **G25**) and an ISDN version (option **G35**). Under certain circumstances, an appropriate extension cable is required to connect to the telephone line.

Further, a 24 V DC power supply is required locally for the TS Adapter.

##### Note:

You will find additional information on TeleService in the following Service&Support article on the Internet at <http://support.automation.siemens.com/WW/view/de/20301397>

#### G30

##### PROFIBUS master (SINAMICS GM150 with static excitation unit, see Accessories, Chapter 7)

SINAMICS GM150 converters can communicate as standard only as PROFIBUS slaves. Therefore, in conjunction with a SINAMICS GM150 converter, a SIMATIC S7 controller with PROFIBUS master capability is used in the static excitation unit.

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Options

##### G61

##### Additional TM31 Terminal Module

One TM31 Terminal Module and two TM15 Terminal Modules for integrating warning and fault messages and drive signals and for communicating with a higher control level are already included in the standard version of the converter. If the number of signals to be monitored is not sufficient, the interface can also be extended by an additional Terminal Module. Additional digital inputs and outputs and two analog inputs and outputs are available with the TM31.

The TM31 Terminal Module has:

- 8 digital inputs
- 4 bidirectional digital inputs and outputs
- 2 relay outputs with changeover contact
- 2 analog inputs
- 2 analog outputs
- 1 temperature sensor (KTY84-130 or PTC)

The following table shows an overview of the exclusions, which must be considered when selecting options **G61** or **G62**.

|                         | G61 | G62 | E86 | E87 | L80 to L93, L95 | L94, L96 |
|-------------------------|-----|-----|-----|-----|-----------------|----------|
| <b>G61</b>              |     | ✓   | ✓   | ✓   | –               | –        |
| <b>G62</b>              | ✓   |     | –   | –   | ✓               | –        |
| <b>E86</b>              | ✓   | –   |     | ✓   | ✓               | –        |
| <b>E87</b>              | ✓   | –   | ✓   |     | ✓               | ✓        |
| <b>L80 bis L93, L95</b> | –   | ✓   | ✓   | ✓   |                 | ✓        |
| <b>L94, L96</b>         | –   | –   | –   | ✓   | ✓               |          |

✓ Options can be combined

– Options are mutually exclusive

##### Note:

For isolated analog inputs/outputs, options **E86** or **E87** are available.

##### TM31 Terminal Module

##### Digital inputs

- Voltage -3 ... +30 V
- Low level (an open digital input is interpreted as "low") -3 ... +5 V
- High level 15 ... 30 V
- Current consumption at 24 V DC, typ. 10 mA
- Signal propagation times of digital inputs, approx.
  - L → H 50 μs
  - H → L 100 μs
- Conductor cross-section, max. 1.5 mm<sup>2</sup>

##### Digital outputs

(sustained short-circuit strength)

- Voltage 24 V DC
- Load current per digital output, max. 100 mA
- Total current of digital outputs, max. 400 mA
- Conductor cross-section, max. 1.5 mm<sup>2</sup>

##### Analog inputs

(a switch is used to toggle between voltage and current input)

- As voltage input
  - Voltage range -10 ... +10 V
  - Internal resistance  $R_i$  100 kΩ
- As current input
  - Current range 4 ... 20 mA/-20 ... +20 mA, 0 ... 20 mA
  - Internal resistance  $R_i$  250 Ω
  - Resolution 11 bit + sign
- Conductor cross-section, max. 1.5 mm<sup>2</sup>

##### Analog outputs

(sustained short-circuit strength)

- Voltage range -10 ... +10 V
- Load current, max. -3 ... +3 mA
- Current range 4 ... 20 mA, -20 ... +20 mA, 0 ... 20 mA
- Load resistance, max. 500 Ω for outputs in the range -20 ... +20 mA
- Resolution 11 bit + sign
- Conductor cross-section, max. 1.5 mm<sup>2</sup>

##### Relay outputs

(changeover contacts)

- Load current, max. 8 A
- Operating voltage, max. 250 V AC, 30 V DC
- Switching power at 250 V AC, max. 2000 VA (cos φ = 1)  
750 VA (cos φ = 0.4)
- Switching power at 30 V DC, max. 240 W (ohmic load)
- Required minimum current 100 mA
- Conductor cross-section, max. 2.5 mm<sup>2</sup>

# Description of options

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Options

##### G63

##### Additional TM15 Terminal Module

One TM31 Terminal Module and two TM15 Terminal Modules for integrating alarm and fault messages as well as control signals and for communicating with a higher-level control are already included in the standard version of the converter. The number of digital inputs and outputs can be expanded with an additional TM15 Terminal Module. This is recommended if, for instance, external signals are to be read in and processed or external components are to be controlled in addition to the standard customer's terminal strip.

The TM15 Terminal Module has:

- 24 bidirectional digital inputs and outputs (isolation in three groups of eight channels each)
- 24 green status LEDs for indicating the logical signal status of the relevant terminal

##### TM15 Terminal Module

##### Digital inputs

|  |                     |
|--|---------------------|
| • Voltage  | -30 ... +30 V       |
| • Low level<br>(an open digital input is interpreted as "low") | -30 ... +5 V        |
| • High level   | 15 ... 30 V         |
| • Current consumption at 24 V DC                               | 5 ... 11 mA         |
| • Signal propagation times of digital inputs, typ.             |                     |
| - L → H  | 50 μs               |
| - H → L  | 100 μs              |
| • Conductor cross-section, max.                                | 1.5 mm <sup>2</sup> |

##### Digital outputs

(sustained short-circuit strength)

|  |                     |
|--|---------------------|
| • Voltage                                      | 24 V DC             |
| • Load current per digital output, max.        | 0.5 A               |
| • Output delay (ohmic load)                    |                     |
| - L → H, typ./max.                             | 50/100 μs           |
| - H → L, typ./max.                             | 150/225 μs          |
| • Total current of digital outputs (per group) | 400 mA              |
| - Up to 60 °C                                  | 2 A                 |
| - Up to 50 °C                                  | 3 A                 |
| - Up to 40 °C                                  | 4 A                 |
| • Conductor cross-section, max.                | 1.5 mm <sup>2</sup> |

##### G66

##### PADU8 diagnostics module (SINAMICS GM150 in IGCT version and SINAMICS SM150 in IGCT version)

The PADU8 diagnostic module reads out up to eight analog signals and up to eight digital signals from the gating and monitoring module of the power unit and makes these available for diagnostic purposes or for further processing. The typical detection cycle of all channels in parallel is 1 ms, enabling rapid signal characteristics to be detected and diagnosed simultaneously. The detected values are transferred to an evaluation system (e.g. notebook) either by optical conductors or by an RJ11 socket. All output data are available in parallel at the optical conductor output and at the RJ11 socket. This means that measurements can be taken in parallel at the RJ11 socket without disrupting the transfer of data at the optical conductor. With the option **G66** a PADU8 diagnostic module is integrated in the control section of each Motor Module.

##### G70

##### Pulse distributor for transferring the speed encoder signal (SINAMICS SM150; SINAMICS GM150 on request)

With this pulse distributor it is possible to split the encoder signal. This possibility is used, for example, when speed list values from an HTL incremental encoder are required at various points for measured-value acquisition and processing.

The pulse distributor transfers the HTL incremental encoder signals to two separate RS422 signal outputs. The inputs are electrically isolated from the outputs.

8-pole terminal strips are used for the connection.

##### Note:

For SINAMICS GM150, option **K50** (Sensor Module Cabinet-Mounted SMC30) should be ordered at the same time.

##### G71

##### Optical bus terminal (OBT) for PROFIBUS (SINAMICS SM150; SINAMICS GM150 on request)

PROFIBUS OBT is a network component for use in optical PROFIBUS DP fieldbus networks. The individual bus stations are linked using two-phase plastic optical conductors. These automatically provide isolation and prevent potential differences in large plants from having any impact.

The OBT has three interfaces:

Channel 1 is an electrical RS485 interface which is implemented as a 9-pole Sub D socket connector and establishes the link to the converter control.

Channels 2 and 3 form the optical interface. They are configured as a duplex socket and can be used for connection on the plant side to higher-level systems.

##### Note:

For SINAMICS GM150, option **G71** cannot be combined with options **G20 to G24** and **G34** (access to other bus systems) as well as with **G25** and **G35** (Teleservice).

### Options

#### K20

##### **Indicator lights in the cabinet door**

With option **K20**, five indicator lights that signal the operating status of the converter are provided in the cabinet door of the control section.

- Fault (red)
- Warning (yellow)
- Operation (green)
- Drive ready (white)
- Local operation (white)

#### K21

##### **Display instruments in the cabinet door for voltage, current, speed and power as well as indicator lights**

To enable process variables to be displayed, analog display instruments that show the measurement parameter as a % are located in the cabinet door.

- Motor current (0 to +120 %)
- Motor speed (-120 % ... 0 ... +120 %)
- Calculated motor power (0 to +120 %)
- Motor voltage (0 to +120 %).

##### Note:

Option **K21** includes option **K20**.

#### K22

##### **Display instruments in the cabinet door for current, speed, power and winding temperature as well as indicator lights**

To enable process variables to be displayed, analog display instruments that show the measurement parameter as a % are installed in the cabinet door. The motor winding temperature is displayed as an absolute value in °C.

- Motor current (0 to +120 %)
- Motor speed (-120 % ... 0 ... +120 %)
- Calculated motor power (0 to +120 %)
- Motor winding temperature (0 to 200 °C)

##### Note:

Option **K22** includes option **K20**.

#### K50

##### **SMC30 Sensor Module Cabinet-Mounted (SINAMICS GM150, standard for SINAMICS SM150)**

The SMC30 encoder module can be used to record the actual motor speed. The signals from the rotary pulse encoder are converted here and made available to the closed-loop control for evaluation via the DRIVE-CLiQ interface.

The following encoders are supported by the SMC30:

- TTL encoders
- HTL encoders

The maximum connectable conductor cross-section is 20 mm<sup>2</sup>.

| Terminal      | Significance          |
|---------------|-----------------------|
| <b>-X521:</b> |                       |
| 1             | Track A+              |
| 2             | Track A-              |
| 3             | Track B+              |
| 4             | Track B-              |
| 5             | Track R+              |
| 6             | Track R-              |
| <b>-X521:</b> |                       |
| 1             | Power supply 5 V/24 V |
| 2             |                       |

#### K80

##### **Control of "Safe Torque Off" function (SINAMICS SM150; SINAMICS GM150 on request)**

The "Safe Torque Off" function is a "mechanism for preventing the drive from unexpectedly starting" according to EN 60204-1/VDE0113T1 (IEC 60204-1), Section 5.4. In conjunction with external circuitry, the "Safe Torque Off" function has been certified by TÜV-Süd [German Technical Inspectorate] in accordance with EN ISO 13849-1 with Safety Category 3 and Performance Level d as well as EN 61508 (IEC 61508), Parts 1 to 4, SIL 2. However, this certification is only valid if the plant-side circuit breaker is equipped with an undervoltage trip unit.

The switch on the motor side as shutdown path can be eliminated as a result of the "Safe Torque Off" function.

The comparison between options **K80** and **L60** contains additional information. ([see the description of option L60](#)).

##### Note:

Option **K80** is only available for SINAMICS GM150 on request. However, option **L60** (EMERGENCY-STOP, Stop Category 1 for controlled stopping) is available for this purpose.

# Description of options

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Options

##### L08

##### Output reactor

The output reactor is used to limit the capacitive charge-reversal currents of motor cables. Data regarding cable lengths when using the output reactor can be obtained for specific systems from your local Siemens sales contact.

| Converter   | Max. cable lengths  |               |  |               |
|---|---|---------------|--|---------------|
|   | Without output reactor (standard)   |               | With output reactor <sup>1)</sup> (option L08) |               |
|   | Shielded  | Un-shielded   | Shielded                                       | Un-shielded   |
| <b>Output voltage 2.3 kV to 4.16 kV</b>                     |   |               |  |               |
| SINAMICS GM150 IGBT version and SINAMICS SM150 IGBT version | Up to 2 parallel cables: each 100 m<br>3 parallel cables: each 80 m<br>>3 parallel cables: not permitted  | Not permitted | On request                                     | Not permitted |
| <b>Output voltage 3.3 kV</b>                                |   |               |  |               |
| SINAMICS GM150 as IGCT version                              | Up to 2 parallel cables: each 100 m<br>3 parallel cables: each 80 m<br>4 parallel cables: each 80 m<br>Mechanically, up to six parallel cables are possible (on request). | Not permitted | On request                                     | Not permitted |
| SINAMICS SM150 IGCT version                                 | Up to 4 parallel cables: each 80 m<br>Mechanically, up to six parallel cables are possible (on request).  | Not permitted | On request                                     | Not permitted |

The output reactor is located in an additional cabinet unit.

##### Notice:

When using an output reactor, the following values apply for the maximum output frequency:

- SINAMICS GM150 in IGBT version and SINAMICS SM150 in IGBT version: 150 Hz
- SINAMICS GM150 in IGCT version and SINAMICS SM150 in IGCT version: 90 Hz

##### Notice:

With option **L08** the cabinet width is increased as follows:

- SINAMICS GM150 in IGBT version and SINAMICS SM150 in IGBT version:
  - Single circuit configuration: 600 mm
  - Parallel circuit configuration: 2 × 600 mm

When option **M13** or **M78** is simultaneously selected the width does not have to be increased.

- SINAMICS GM150 in IGCT version and SINAMICS SM150 in IGCT version: 700 mm per converter unit

When option **L49** or **L51/L52** is simultaneously selected, the width does not have to be increased.

<sup>1)</sup> Distance between the converter and the motor depending on the current load for max. 6 three-wire EMC cables connected in parallel.

##### L21

##### Overvoltage protection AC (static excitation unit, see Accessories, Chapter 7)

Option **L21** provides type SICROWBAR integrated overvoltage protection on the input side.

##### L29

##### Bidirectional synchronized bypass operation (SINAMICS GM150 in the IGBT version with induction motor)

Option **L29** offers synchronization with seamless (commutating) passing of the motor to the line and receiving of the motor from the line.

The converter synchronizes the motor to the existing line (phase relation, frequency and voltage). The motor is subsequently connected in parallel to the line by means of circuit breaker S3 before the output-side circuit breaker S2 opens.

Approx. 100 ms go by according to the response time constants of the two circuit breakers (opening time and closing time). Within this period of time the motor commutates from the converter to the line. This ensures smooth passing of the motor to the line.

If the motor is to be subsequently taken from the line and operated using the converter again, the commutation process is executed in the reverse order. The converter is first run up no-load operation and its output voltage is adapted to the line voltage (= motor voltage) in its phase relation, frequency and amplitude. Then circuit breaker S2 is closed before S3 is opened and the motor is isolated from the line.

This ensures that the motor is received smoothly by the converter so that it can be either operated under variable speed or shut down under control. Speed-controlled operation during running up and shutting down does not produce any high starting and peak transient torques that could damage the mechanical connection or cause transient and pressure fluctuations in the process.

### Options

With option **L29** a VSM10 Voltage Sensing Module is integrated into the converter. The VSM10 detects the line supply voltage regarding phase position, frequency and amplitude. A voltage transformer, which should be provided on the primary side of the switch S1 (plant-side) is used for this purpose. It thus supplies the data for synchronization of the motor to the line and from the line to the converter. The converter control prepares the drive signals of the two circuit breakers to be provided on the plant side.

In addition, an output reactor with  $u_K = 10\%$  ( $\pm 2\%$ ) or option **Y15** (sine-wave filter) is required to decouple the converter during commutation.

#### Note:

A  $u_K$  value of 10 % cannot be reached with option **L08** (output reactor).

Circuit breaker S3 should be dimensioned so that it protects the motor against overvoltage and overcurrent during line supply operation. If temperature sensors are fitted in the motor, these must be monitored on the plant side for the case of mains operation.

#### Notice:

Option **L29** is only possible if the converter output voltage is the same as the line voltage.

### L32

#### Automatic restart (SINAMICS GM150)

Option **L32** enables the converter to be restarted after a power failure once the mains supply has been restored.

If such a restart is required for technical reasons, the conditions set out below must be taken into consideration.

The 400 V 3 AC and 230 V 1 AC auxiliary infeed supplies must not fail; this is so that the voltage supply to the fans and coolant pumps and to the controller and closed-loop control is maintained.

If the main infeed fails, a pulse block is triggered and the DC link is supported through precharging for a short period. It is important to distinguish between two cases here:

#### Case A:

The circuit breaker on the input side is still switched on.

When the medium voltage supply returns, the DC link voltage rises. This is detected by the closed-loop control and the controller. Operation is resumed when a threshold value is exceeded.

#### Case B:

The circuit breaker on the input side has responded.

After a fixed time (which can be parameterized), the circuit breaker receives an "ON command". The response of the DC link voltage is then analyzed.

If the DC link voltage falls, the converter is disconnected.

If the DC link voltage rises, operation is resumed when a threshold value is exceeded.

Depending on the down times, load characteristic and moment of inertia, the drive may be "caught" again or the machine may need to be "excited" again first before operation can be resumed.

With option **L32** a VSM10 Voltage Sensing Module is integrated into the converter. The VSM10 detects the line supply voltage regarding phase position, frequency and amplitude. A voltage transformer, which should be provided on the primary side of the

switch S1 (plant-side) is used for this purpose. This enables the controller and closed-loop control to detect when the medium voltage returns after a power failure if the circuit breaker on the input side has dropped out.

For safety reasons, a time limit is built in between the power failure and the maximum permitted line restoration time so that the drive cannot start up again uncontrolled.

A signal is issued in addition when restarting and can be used to generate an acoustic warning.

#### Note:

For SINAMICS SM150 in the IGBT and IGCT versions, the Voltage Sensing Module VSM10 as well as the software functionality is included as standard.

#### Connections at the VSM10 Voltage Sensing Module

##### DRIVE-CLiQ interface to connect VSM10

# Description of options

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Options

##### L48

##### **Make-proof grounding switch at the converter input, motor-operated (SINAMICS SM150 in IGBT version on request only)**

If grounding on the infeed side is required for safety and protection reasons, a motorized make-proof grounding switch can be ordered under code **L48**. The number of make-proof grounding switches depends on the particular infeed version (12/24-pulse for SINAMICS GM150 or 6-pulse for SINAMICS SM150).

For safety reasons, the converter controller locks these grounding switches against activation while voltage is still present. The control is integrated into the protection and monitoring chain of the converter. The grounding switches are inserted automatically when the standard grounding switches of the DC link are inserted.

In the event of maintenance work on the converter, it must be ensured on the plant side that there is no external voltage present, e.g. auxiliary voltage for fans, the cooling system, controller and closed-loop control and any external outputs in the converter.

##### Notice:

With option **L48** the cabinet width is increased as follows:

- SINAMICS GM150 in IGBT version:  
600 mm
- SINAMICS GM150 in IGCT version:  
2 × 700 mm per converter unit
- SINAMICS SM150 in IGCT version:  
700 mm per converter unit

##### Note:

Option **L48** in conjunction with option **C55** (auxiliary power supply for open-loop and closed-loop control) on request.

##### Note:

For SINAMICS GM150 in IGCT version, option **L48** in conjunction with option **N15** (24-pulse Basic Line Module) on request.

##### L49

##### **Make-proof grounding switch at the converter output, motor-operated (SINAMICS SM150 in IGBT version on request only)**

In certain operating modes/versions of the load machine (e.g. drive line-up with gas turbines) and types of drive motor (e.g. PEM), operating statuses may occur in which there is a risk that energy is fed back to the converter by the motor. This can lead to dangerous voltages. In these cases a motorized grounding switch for the converter output side can be ordered under code **L49**. Where power units are connected in parallel, the number of circuit breakers will rise accordingly.

For safety reasons, the converter open-loop control locks the grounding switch against activation while voltage is still present. The control is integrated into the protection and monitoring chain of the converter. The grounding switches are inserted automatically when the standard grounding switches of the DC link are inserted.

##### Notice:

With option **L49** the cabinet width is increased as follows:

- SINAMICS GM150 in IGBT version:  
600 mm

When options **L51** or **L52** are simultaneously selected, the width does not have to be increased.

- SINAMICS GM150 in IGCT version and  
SINAMICS SM150 in IGCT version:  
700 mm per converter unit

When options **L08** and/or **L51/L52** are simultaneously selected, the width does not have to be increased.

##### Note:

Option **L49** in conjunction with option **C55** (auxiliary power supply for open-loop and closed-loop control) on request.

### Options

#### L50

##### **Cabinet lighting and service socket in the closed-loop control section**

If option **L50** is chosen, a universal lamp and a service socket (Schuko version) are installed respectively in the cabinet panels of the control sections for Motor Modules and Active Line Modules.

The power supply for the cabinet lighting and service socket (on terminal strip = EG-X1) is provided externally. The cabinet lighting is switched on manually via a switch or automatically by an integrated motion detector. The mode is switch-selected.

| Terminal  | Significance |
|-----------|--------------|
| = EG-X1:1 | L1 (230 V)   |
| = EG-X1:2 | N            |

#### L51

##### **Disconnecter at the converter output**

If isolation between the converter output and the drive motor is required for safety and protection reasons, a motorized isolator at the converter output can be ordered under code **L51**.

##### Notice:

The cabinet width increases as follows due to the additional cabinet at the converter:

- SINAMICS GM150 in IGBT version and SINAMICS SM150 in IGBT version: 600 mm

When option **L49** is simultaneously selected, the width does not have to be increased.

- SINAMICS GM150 in IGCT version and SINAMICS SM150 in IGCT version: 700 mm per converter unit

When option **L08** or **L49** are simultaneously selected, the width does not have to be increased.

##### Note:

Option **L51** cannot be combined with option **L52** (circuit breaker at the converter output), and can be ordered on request in conjunction with option **C55** (auxiliary power supply for open-loop and closed-loop control).

#### L52

##### **Circuit breaker at converter output**

If isolation between the converter output and the drive motor is required for safety and protection reasons, a circuit breaker at the converter output can be ordered under code **L52**. This circuit breaker is triggered from the converter controller. On an ON command, the circuit breaker on the output side is connected together with the auxiliaries. The circuit breaker is switched off with the OFF command.

##### Note:

Option **L52** is mandatory in conjunction with permanent-magnet synchronous motors. However, a separate inquiry is required for this option, as several variable secondary conditions must be taken into account.

##### Note:

Option **L52** cannot be combined with option **L51** (disconnecter at the converter output), and can be ordered on request in conjunction with option **C55** (auxiliary power supply for open-loop and closed-loop control).

##### Notice:

With option **L52** the cabinet width is increased as follows:

- SINAMICS GM150 in IGBT version and SINAMICS SM150 in IGBT version: 600 mm

When option **L49** is simultaneously selected, the width does not have to be increased.

- SINAMICS GM150 in IGCT version and SINAMICS SM150 in IGCT version: 700 mm per converter unit

When option **L08** or **L49** are simultaneously selected, the width does not have to be increased.

#### L53

##### **UPS for the power supply of the open-loop and closed-loop control (SINAMICS GM150 on request)**

If there is a danger of voltage dips and brief line supply failures in the plant, then the drive can continue to operate if the closed-loop control is supplied from a UPS. The prerequisite for continued operation is that the DC link voltage does not fall below the  $V_{d\min}$  limit and the medium-voltage switch does not trip due to an undervoltage condition. This means that the drive can tolerate voltage dips up to brief line supply failures; this is especially true if the driven load has a high moment of inertia and the DC link can be kinetically buffered.

In the case of line supply interruptions that cause the power unit to shut down, the downtime is reduced using the automatic restart function (option **L32**). The UPS is configured for a buffer time of up to 10 min.

##### Note:

Option **L53** limits the temperature range as follows:  
 continuous operation: 0 to +40 °C  
 operation <2 h/d: 0 to +45 °C  
 transport and storage: -15 to +50 °C

| Terminal  | Significance |
|-----------|--------------|
| = EB-X1:1 | L1 (230 V)   |
| = EB-X1:2 | N            |

# Description of options

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Options

##### L55

##### Anti-condensation heating for the cabinet

The anti-condensation heating is recommended at low ambient temperatures and high levels of humidity to prevent condensation. The number of 100 W switch cabinet unit heaters fitted depends on the number of cabinet panels. The anti-condensation heaters are controlled by means of a thermostat. Should the external auxiliary infeed fail, this is monitored and reported by the converter for safety reasons.

The voltage for the anti-condensation heating (110 V to 240 V AC, on terminal block = GB-X1:) must be supplied externally.

| Terminal   | Significance       |
|------------|--------------------|
| = GB-X1:1A | L1 (110 ... 240 V) |
| = GB-X1:2A | N                  |

##### L60

##### EMERGENCY STOP, Stop Category 1 for controlled stopping (SINAMICS GM150)

For uncontrolled stopping, the standard converter is equipped with an EMERGENCY-OFF function, which involves integrating an external safety circuit and a positively opening mushroom pushbutton at the front of the unit. When the mushroom pushbutton is pressed, the line supply voltage is disconnected from the converter through the circuit breaker and the motor then coasts down.

As a supplement, the "EMERGENCY-STOP, Stop Category 1" function is available (acc. to EN 60204-1/VDE 0113 T1 (IEC 60204-1)) with option **L60**. This includes stopping the drive in an open-loop controlled fashion using a fast stop along a down ramp that has to be parameterized by the user. The line supply is then disconnected from the converter – the same as for EMERGENCY-OFF – via the time-delayed contact of the safety relay being used. The duration should be set at the safety relay corresponding to the selected down ramp. The selection and the feedback signal of the "EMERGENCY-STOP, Stop Category 1" function are connected to the customer's terminal strip.

Among others, depending on the safety relay selected (single-channel or two-channel) and the selected fault detection (e.g. using cyclic tests) a maximum of Safety Category 3 according to EN 954-1:1996 or EN ISO 13849-1:2006 can be achieved for the "EMERGENCY-STOP, Stop Category 1" function.

##### Notice:

The braking process can take considerable time even with an EMERGENCY-STOP, Stop Category 1.

Among other things, this depends on the total moment of inertia of the drive train. It may be necessary to use a Braking Module (option **L72**).

In addition to option **L60**, the "Safe Torque Off (STO)" safety function is available as option **K80** on request. The two options are compared in the following table.

|                             | Option <b>L60</b><br>EMERGENCY-STOP,<br>Stop Category 1 for<br>controlled stopping  | Option <b>K80</b><br>Safe Torque Off (STO)  |
|-----------------------------|---|---|
| Functionality               | When activated, the drive is braked down to zero speed and the energy feed to the converter is then interrupted by opening the circuit breaker. In addition to the software intervention (OFF3), a safety relay also ensures that the circuit breaker reliably opens. | When activated, the drive is braked down to zero speed and then the gating commands of the power semiconductors are safely inhibited. The circuit breaker remains closed so that the converter is still connected to the power supply. The option also fulfills the "EMERGENCY-STOP, Stop Category 1" function as the rotating motion of the connected motor is brought to a standstill by removing the drive energy. |
| Assured safety feature      | The converter is disconnected from the power after the selected delay time of the safety relay has expired  | Driving torque is safely switched off according to safety category  |
| Safety category             | Up to category 3 acc. to EN 9541:1996 or EN ISO 138491:2006 can be achieved, depending on the circuit arrangement of the safety relay and the fault detection using separate tests.   | EN 9411: 1996, Category 3<br>IEC 61508: 2000, Parts 1 to 4, SIL2  |
| Certification of the option | No; however, the German Statutory Industrial Accident Insurance Association has certified the safety relay  | Yes; by TÜV Süd [German Technical Inspectorate]   |
| User's view                 | <b>The user is responsible for configuring and implementing the safety function.</b>  | <b>The complete safety function is certified if the specifications are strictly met.</b>  |

# Description of options

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Options

##### L72

##### Braking Module

In order to permit braking operation for Basic Infeed (SINAMICS GM150) or for Active Infeed (SINAMICS SM150) to be able to brake even if the power fails, a Braking Module with braking resistor can be used. The mechanical design of the Braking Module corresponds to that of a Motor Module; its actual version is adapted to the converter cooling type (air or water cooling).

The following should be ensured when engineering:

- Shielded cables should be used just the same as at the converter output.
- The same maximum cable lengths as for SINAMICS GM150 in the IGBT version apply (without sine-wave filter or output reactor; refer to [Power cables, Page 9/13](#)).
- Regarding inductance  $L$ , the following requirements apply to the braking resistor and cable routing: The time constant  $L/R$  must not exceed 20  $\mu$ s, i.e.  $L$  must be less than  $R \times 20 \mu$ s.

##### Note:

An external load resistor is connected as the braking resistor. This is not included in the scope of supply ([option Y73 see Page 6/42](#)).

##### Note:

Option **L72** cannot be combined with option **M61** (redundant fan in the power unit).

##### Note:

For SINAMICS SM150 in IGCT version, option **L72** on request.

##### Note:

For SINAMICS GM150 in IGCT version, option **L72** cannot be combined with option **N15** (24-pulse Basic Line Module).

##### Notice:

With option **L72** the cabinet width is increased as follows:

- SINAMICS GM150 in the 12-pulse IGBT version: 600 mm
- SINAMICS SM150 in the IGCT version: 1800 mm

### Description of options

#### Options

Block diagram of the Braking Module with braking resistor

Load diagram

#### L80

##### 2 thermistor protection relays for alarm and fault

Option **L80** offers two thermistor protection relays (with PTB approval) for PTC thermistors (type A) for warning and disconnection. The power supply for the relay and the evaluation is provided within the converter.

An additional TM31 Terminal Module is integrated as interface for further processing and to display signals.

##### Note:

Option **L80** cannot be combined with option **G61** (additional TM31 Terminal Module).

| Terminal    | Meaning (alarm)           |
|-------------|---------------------------|
| = LF-A11:T1 | Sensor circuit connection |
| = LF-A11:T2 | Sensor circuit connection |

| Terminal    | Meaning (disconnection)   |
|-------------|---------------------------|
| = LF-A12:T1 | Sensor circuit connection |
| = LF-A12:T2 | Sensor circuit connection |

#### L81

##### 2 x 2 thermistor protection relays for alarm and fault

Option **L81** offers four thermistor protection relays (with PTB approval) for PTC thermistors (type A) for warning and disconnection. The power supply for the relay and the evaluation is provided within the converter.

An additional TM31 Terminal Module is integrated as interface for further processing and to display signals.

##### Note:

Option **L81** cannot be combined with option **G61** (additional TM31 Terminal Module).

| Terminal    | Meaning (alarm)           |
|-------------|---------------------------|
| = LF-A11:T1 | Sensor circuit connection |
| = LF-A11:T2 | Sensor circuit connection |

| Terminal    | Meaning (disconnection)   |
|-------------|---------------------------|
| = LF-A12:T1 | Sensor circuit connection |
| = LF-A12:T2 | Sensor circuit connection |

| Terminal    | Meaning (alarm)           |
|-------------|---------------------------|
| = LF-A21:T1 | Sensor circuit connection |
| = LF-A21:T2 | Sensor circuit connection |

| Terminal    | Meaning (disconnection)   |
|-------------|---------------------------|
| = LF-A22:T1 | Sensor circuit connection |
| = LF-A22:T2 | Sensor circuit connection |

### Options

#### L82

##### 3 x 2 thermistor protection relays for alarm and fault

Option **L81** offers six thermistor protection relays (with PTB approval) for PTC thermistors (type A) for warning and disconnection. The power supply for the relay and the evaluation is provided within the converter.

An additional TM31 Terminal Module is integrated as interface for further processing and to display signals.

##### Note:

Option **L82** cannot be combined with option **G61** (additional TM31 Terminal Module).

| Terminal    | Meaning (alarm)           |
|-------------|---------------------------|
| = LF-A11:T1 | Sensor circuit connection |
| = LF-A11:T2 | Sensor circuit connection |

| = LF-A32:T1 | Sensor circuit connection |
| = LF-A32:T2 | Sensor circuit connection |

#### L87

##### Rotor ground-fault monitoring (static excitation unit, see Accessories, Chapter 7)

Option **L87** provides integrated ground-fault monitoring for the rotor circuit.

#### L90 to L96

Three Pt100 inputs are available in the standard version. As a consequence, together with one of the options **L90 to L96** the following maximum number of Pt100 inputs can be achieved:

- SINAMICS GM150 in the IGBT version: 9 (with **L91**, **L93** or **L95**)
- SINAMICS GM150 in IGCT version and SINAMICS SM150 in IGCT version: 15 (with **L94** or **L96**)

#### L90

##### Pt100 evaluation unit with 3 inputs

The Pt100 evaluation unit can monitor up to three sensors. For all three sensors, the limits for alarm and disconnection must be set centrally.

The output relays are integrated into the internal fault and shut-down sequence of the converter.

An additional TM31 Terminal Module is integrated as interface for further processing and to display signals. The terminals that are assigned for the Pt100 evaluation are listed in the following table.

##### Note:

Option **L90** cannot be combined with option **G61** (additional TM31 Terminal Module).

| Terminal            | Significance    |
|---------------------|-----------------|
| = LJ-A11:1T1 to 1T3 | Pt100; sensor 1 |
| = LJ-A11:2T1 to 2T3 | Pt100; sensor 2 |
| = LJ-A11:3T1 to 3T3 | Pt100; sensor 3 |

The sensors can be connected using a two-wire or three-wire system. In a two-wire system inputs xT1 and xT2 must be assigned and a jumper inserted between terminals xT2 and xT3.

# Description of options

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Options

##### L91

##### 2 Pt100 evaluation units, each with 3 inputs

Each Pt100 evaluation unit can monitor up to three sensors. For all three sensors, the limits for alarm and disconnection must be set centrally.

The output relays are integrated into the internal fault and shut-down sequence of the converter.

An additional TM31 Terminal Module is integrated as interface for further processing and to display signals. The terminals that are assigned for the Pt100 evaluation are listed in the following table.

##### Note:

Option **L91** cannot be combined with option **G61** (additional TM31 Terminal Module).

| Terminal            | Significance    |
|---------------------|-----------------|
| = LJ-A11:1T1 to 1T3 | Pt100; sensor 1 |
| = LJ-A11:2T1 to 2T3 | Pt100; sensor 2 |
| = LJ-A11:3T1 to 3T3 | Pt100; sensor 3 |

| Terminal            | Significance    |
|---------------------|-----------------|
| = LJ-A12:1T1 to 1T3 | Pt100; sensor 1 |
| = LJ-A12:2T1 to 2T3 | Pt100; sensor 2 |
| = LJ-A12:3T1 to 3T3 | Pt100; sensor 3 |

The sensors can be connected using a two-wire or three-wire system. In a two-wire system inputs xT1 and xT2 must be assigned and a jumper inserted between terminals xT2 and xT3.

##### L92

##### 3 Pt100 evaluation units each with 3 inputs (SINAMICS GM150 in the IGCT version and SINAMICS SM150 in the IGCT version)

Each Pt100 evaluation unit can monitor up to three sensors. For all three sensors, the limits for alarm and disconnection must be set centrally.

The output relays are integrated into the internal fault and shut-down sequence of the converter.

An additional TM31 Terminal Module is integrated as interface for further processing and to display signals. The terminals that are assigned for the Pt100 evaluation are listed in the following table.

##### Note:

Option **L92** cannot be combined with option **G61** (additional TM31 Terminal Module).

| Terminal            | Significance    |
|---------------------|-----------------|
| = LJ-A11:1T1 to 1T3 | Pt100; sensor 1 |
| = LJ-A11:2T1 to 2T3 | Pt100; sensor 2 |
| = LJ-A11:3T1 to 3T3 | Pt100; sensor 3 |

| Terminal            | Significance    |
|---------------------|-----------------|
| = LJ-A12:1T1 to 1T3 | Pt100; sensor 1 |
| = LJ-A12:2T1 to 2T3 | Pt100; sensor 2 |
| = LJ-A12:3T1 to 3T3 | Pt100; sensor 3 |

| Terminal            | Significance    |
|---------------------|-----------------|
| = LJ-A21:1T1 to 1T3 | Pt100; sensor 1 |
| = LJ-A21:2T1 to 2T3 | Pt100; sensor 2 |
| = LJ-A21:3T1 to 3T3 | Pt100; sensor 3 |

The sensors can be connected using a two-wire or three-wire system. In a two-wire system inputs xT1 and xT2 must be assigned and a jumper inserted between terminals xT2 and xT3.

### Options

#### L93

##### **Pt100 evaluation unit with 6 inputs and 2 analog outputs (outputs for display connected to the control)**

The Pt100 evaluation unit can monitor up to six sensors. The limit values can be programmed by the user for each channel.

In the standard setting, the measuring channels are divided into two groups of three channels each. With motors, for example, this means that three Pt100s in the stator windings and two Pt100s in the motor bearings can be monitored. Channels that are not used can be suppressed using appropriate parameter settings.

The output relays are integrated into the internal fault and shut-down sequence of the converter. Two freely programmable analog outputs (0/4 mA to 20 mA and 0/2 V to 10 V) are also available.

An additional TM31 Terminal Module is integrated as interface for further processing and to display signals and analog outputs. The terminals that are assigned for the Pt100 evaluation are listed in the following table.

#### Note:

Option **L93** cannot be combined with option **G61** (additional TM31 Terminal Module).

| Terminal            | Significance             |
|---------------------|--------------------------|
| = LG-A11:T11 to T13 | Pt100; sensor 1; group 1 |
| = LG-A11:T21 to T23 | Pt100; sensor 2; group 1 |
| = LG-A11:T31 to T33 | Pt100; sensor 3; group 1 |
| = LG-A11:T41 to T43 | Pt100; sensor 1; group 2 |
| = LG-A11:T51 to T53 | Pt100; sensor 2; group 2 |
| = LG-A11:T61 to T63 | Pt100; sensor 3; group 2 |

The sensors can be connected to the Pt100 evaluation unit using either a two-wire or three-wire system. In a two-wire system inputs Tx1 and Tx3 must be assigned. In a three-wire system, input Tx2 must also be connected (x = 1, 2, ..., 6).

|                     |  |
|---------------------|--|
| = LG-A11:11/12/14   | Relay output limit for group 1 reached (alarm); changeover contact |
| = LG-A11:21/22/24   | Relay output limit for group 1 reached (fault); changeover contact |
| = LG-A11:T1 (OUT 1) | Analog output Out 1; sensor group 1                                |
| = LG-A11:I1 (OUT 1) | Analog output Out 1; sensor group 1                                |
| = LG-A11:31/32/34   | Relay output limit for group 2 reached (alarm); changeover contact |
| = LG-A11:41/42/44   | Relay output limit for group 2 reached (fault); changeover contact |
| = LG-A11:T2 (OUT 2) | Analog output Out 2; sensor group 2                                |
| = LG-A11:I2 (OUT 2) | Analog output Out 2; sensor group 2                                |

#### L94

##### **2 Pt100 evaluation units each with 6 inputs and 2 analog outputs (outputs for display connected to the control; SINAMICS GM150 in the IGCT version and SINAMICS SM150 in the IGCT version)**

Option **L94** offers two Pt100 evaluation units as described under option **L93**, enabling up to 12 sensors in total to be monitored.

Two additional TM31 Terminal Modules are integrated as interfaces for further processing and to display signals and analog outputs. The terminals that are assigned for the Pt100 evaluation are listed in the following table.

#### Note:

Option **L94** cannot be combined with options **G61** and **G62** (additional TM31 Terminal Modules), as well as with option **E86** (additional analog inputs).

| Terminal            | Significance             |
|---------------------|--------------------------|
| = LG-A11:T11 to T13 | Pt100; sensor 1; group 1 |
| = LG-A11:T21 to T23 | Pt100; sensor 2; group 1 |
| = LG-A11:T31 to T33 | Pt100; sensor 3; group 1 |
| = LG-A11:T41 to T43 | Pt100; sensor 1; group 2 |
| = LG-A11:T51 to T53 | Pt100; sensor 2; group 2 |
| = LG-A11:T61 to T63 | Pt100; sensor 3; group 2 |

The sensors can be connected to the Pt100 evaluation unit using either a two-wire or three-wire system. In a two-wire system inputs Tx1 and Tx3 must be assigned. In a three-wire system, input Tx2 must also be connected (x = 1, 2, ..., 6).

|                     |  |
|---------------------|--|
| = LG-A11:11/12/14   | Relay output limit for group 1 reached (alarm); changeover contact |
| = LG-A11:21/22/24   | Relay output limit for group 1 reached (fault); changeover contact |
| = LG-A11:T1 (OUT 1) | Analog output Out 1; sensor group 1                                |
| = LG-A11:I1 (OUT 1) | Analog output Out 1; sensor group 1                                |
| = LG-A11:31/32/34   | Relay output limit for group 2 reached (alarm); changeover contact |
| = LG-A11:41/42/44   | Relay output limit for group 2 reached (fault); changeover contact |
| = LG-A11:T2 (OUT 2) | Analog output Out 2; sensor group 2                                |
| = LG-A11:I2 (OUT 2) | Analog output Out 2; sensor group 2                                |

| Terminal            | Significance             |
|---------------------|--------------------------|
| = LG-A21:T11 to T13 | Pt100; sensor 1; group 3 |
| = LG-A21:T21 to T23 | Pt100; sensor 2; group 3 |
| = LG-A21:T31 to T33 | Pt100; sensor 3; group 3 |
| = LG-A21:T41 to T43 | Pt100; sensor 1; group 4 |
| = LG-A21:T51 to T53 | Pt100; sensor 2; group 4 |
| = LG-A21:T61 to T63 | Pt100; sensor 3; group 4 |

The sensors can be connected to the Pt100 evaluation unit using either a two-wire or three-wire system. In a two-wire system inputs Tx1 and Tx3 must be assigned. In a three-wire system, input Tx2 must also be connected (x = 1, 2, ..., 6).

|                     |  |
|---------------------|--|
| = LG-A21:11/12/14   | Relay output limit for group 3 reached (alarm); changeover contact |
| = LG-A21:21/22/24   | Relay output limit for group 3 reached (fault); changeover contact |
| = LG-A21:T1 (OUT 1) | Analog output Out 1; sensor group 3                                |
| = LG-A21:I1 (OUT 1) | Analog output Out 1; sensor group 3                                |
| = LG-A21:31/32/34   | Relay output limit for group 4 reached (alarm); changeover contact |
| = LG-A21:41/42/44   | Relay output limit for group 4 reached (fault); changeover contact |
| = LG-A21:T2 (OUT 2) | Analog output Out 2; sensor group 4                                |
| = LG-A21:I2 (OUT 2) | Analog output Out 2; sensor group 4                                |

##### L95

##### **Pt100 evaluation unit with 6 inputs for explosion-protected motors and 2 analog outputs (outputs for display connected to the control)**

Six evaluation units are available for use in hazardous areas Zone 2 and Zone 22 (non-conductive dust) Div. 2 and in safe areas (intrinsically safe input: [Ex ia] IIC). The resistance thermometers (Pt100, Pt500, Pt1000) can be operated in a two-wire, three-wire or four-wire system. The six evaluation units are arranged in two groups of three units each. For each group the warning and disconnect messages are arranged together and integrated into the warning and fault reporting chain of the converter. In each group a temperature reading is also led to an analog input of the converter so that it is available to the converter control for measurement and display purposes.

An additional TM31 Terminal Module is integrated as interface for further processing and to display signals and analog outputs. The terminals that are assigned for the Pt100 evaluation are listed in the following table.

##### Note:

Option **L95** cannot be combined with option **G61** (additional TM31 Terminal Module).

| Terminal             | Significance             |
|----------------------|--------------------------|
| = LH-A11:10/11/12/14 | Pt100; sensor 1; group 1 |
| = LH-A12:10/11/12/14 | Pt100; sensor 2; group 1 |
| = LH-A13:10/11/12/14 | Pt100; sensor 3; group 1 |

| Terminal             | Significance             |
|----------------------|--------------------------|
| = LH-A21:10/11/12/14 | Pt100; sensor 1; group 1 |
| = LH-A22:10/11/12/14 | Pt100; sensor 2; group 1 |
| = LH-A23:10/11/12/14 | Pt100; sensor 3; group 1 |

The sensors can be connected to the Pt100 evaluation unit in either a two-wire, three-wire or four-wire system. In a two-wire system the inputs 10 and 12 must be connected, in a three-wire system the inputs 10, 11 and 12 and in a four-wire system the inputs 10, 11, 12 and 14 must be connected.

Parameterization is done using software.

##### L96

##### **2 Pt100 evaluation units each with 6 inputs for explosion-protected motors and 2 analog outputs (outputs for display connected to the control system; SINAMICS GM150 in the IGCT version and SINAMICS SM150 in the IGCT version)**

Two times six evaluation units are available for use in hazardous areas Zone 2 and Zone 22 (non-conductive dust) Div. 2 and in safe areas (intrinsically safe input: [Ex ia] IIC). The resistance thermometers (Pt100, Pt500, Pt1000) can be operated in a two-wire, three-wire or four-wire system. The evaluation units are arranged in groups of three units each. For each group the warning and disconnect messages are arranged together and integrated into the warning and fault reporting chain of the converter. In each group a temperature reading is also led to an analog input of the converter so that it is available to the converter control for measurement and display purposes.

Two additional TM31 Terminal Modules are integrated as interfaces for further processing and to display signals and analog outputs. The terminals that are assigned for the Pt100 evaluation are listed in the following table.

##### Note:

Option **L96** cannot be combined with options **G61** and **G62** (additional TM31 Terminal Modules), as well as with option **E86** (additional analog inputs).

| Terminal             | Significance             |
|----------------------|--------------------------|
| = LH-A11:10/11/12/14 | Pt100; sensor 1; group 1 |
| = LH-A12:10/11/12/14 | Pt100; sensor 2; group 1 |
| = LH-A13:10/11/12/14 | Pt100; sensor 3; group 1 |

| Terminal             | Significance             |
|----------------------|--------------------------|
| = LH-A21:10/11/12/14 | Pt100; sensor 1; group 1 |
| = LH-A22:10/11/12/14 | Pt100; sensor 2; group 1 |
| = LH-A23:10/11/12/14 | Pt100; sensor 3; group 1 |

| Terminal             | Significance             |
|----------------------|--------------------------|
| = LH-A31:10/11/12/14 | Pt100; sensor 1; group 1 |
| = LH-A32:10/11/12/14 | Pt100; sensor 2; group 1 |
| = LH-A33:10/11/12/14 | Pt100; sensor 3; group 1 |

| Terminal             | Significance             |
|----------------------|--------------------------|
| = LH-A41:10/11/12/14 | Pt100; sensor 1; group 1 |
| = LH-A42:10/11/12/14 | Pt100; sensor 2; group 1 |
| = LH-A43:10/11/12/14 | Pt100; sensor 3; group 1 |

The sensors can be connected to the Pt100 evaluation unit in either a two-wire, three-wire or four-wire system. In a two-wire system the inputs 10 and 12 must be connected, in a three-wire system the inputs 10, 11 and 12 and in a four-wire system the inputs 10, 11, 12 and 14 must be connected.

Parameterization is done using software.

### Options

#### M10

##### **Safety interlocking system**

The safety interlocking system is based on the key transfer system developed by Castell. It is a supplementary mechanism to the electromagnetic door locking system integrated as standard. To obtain the coded key of the key exchange unit, the medium-voltage circuit breaker must first be opened. The opened medium-voltage circuit breaker releases the keys to the key exchange unit, which in turn releases the keys to the converter cabinet doors of the power unit. This ensures that the converter is isolated from the medium voltage and that the medium voltage is no longer present in the cabinet. As long as the cabinet doors are not closed again and the keys of the converter cabinet doors are not put back into the key exchange unit, the key for the medium voltage circuit breaker will not be released and the medium voltage circuit breaker cannot be reclosed.

#### M11

##### **Dust protection (air-cooled converters)**

With option **M11** the cabinet doors are fitted with additional filter mats to prevent the ingress of dangerous dusts that would otherwise be deposited on the power unit components. The filter mats are fitted to the outside of the cabinet doors, which means that they can be replaced during operation.

A differential pressure technique continually determines the amount of dust in the filter mats. A maintenance request is issued in plenty of time before the filter mats get clogged up.

When replacing the filter mats, it must be ensured that no dust gets into the cabinet unit through the air pulled in by the cabinet fans as they run.

##### Note:

For SINAMICS SM150 in the IGCT version, the filter mats are already included as standard.

#### M13

##### **Power cables are connected at the converter input from the top (SINAMICS GM150 in the IGBT version)**

Given suitable installation conditions, option **M13** enables the line-side power cable to be introduced into the cabinet unit from the top.

##### Notice:

Option **M13** increases the width of the cabinet unit by 600 mm. When simultaneously selecting option **L08** (output reactor) or **Y15** (sine-wave filter) the width does not increase. In the case of option **Y15**, the dimensions in the Technical specifications apply.

##### Note:

Option **M13** is included in option **M78** (power cable connection at the converter output from the top).

#### M16

##### **Extended dust protection (SINAMICS GM150 in a water-cooled IGBT version)**

Opening the cabinet doors before commissioning (e.g. to route connecting cables) can mean, in certain environments, that the converter is polluted, for example as a result of welding operations. Option **M16** involves installing a dust protection cover manufactured out of polycarbonate (Makrolon) inside the converter. This dust protection cover reduces the amount of pollution that can get to the converter components through open doors, therefore minimizing cleaning costs for the converter.

##### Note:

The commissioning personnel must remove the dust protection cover of the converter prior to commissioning.

#### M32

##### **Customer's terminal strip with spring-loaded terminals for signal cables up to 2.5 mm<sup>2</sup>**

The signal cable is normally connected directly to the terminals of the TM31 or TM15 Terminal Modules. It must be noted that the maximum connectable cross-section for TM31 and TM15 is limited to 1.5 mm<sup>2</sup>.

With option **M32**, the signals are fed to a terminal strip with spring-loaded terminals. In this case connection cross-sections of up to 2.5 mm<sup>2</sup> are permitted.

##### Note:

In conjunction with options **G61**, **G62** and **L80 to L96**, it is not possible to lead out the signals from the additional Terminal Modules.

#### M33

##### **Customer's terminal strip with screw terminals for signal cables up to 2.5 mm<sup>2</sup>**

The signal cable is normally connected directly to the terminals of the TM31 or TM15 Terminal Modules. It must be noted that the maximum connectable cross-section for TM31 and TM15 is limited to 1.5 mm<sup>2</sup>.

With option **M33**, the signals are fed out to a terminal strip with screw terminals. In this case connection cross-sections of up to 2.5 mm<sup>2</sup> are permitted.

##### Note:

In conjunction with options **G61**, **G62** and **L80 to L96**, it is not possible to lead out the signals from the additional Terminal Modules.

# Description of options

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Options

##### M34

##### **Connection of auxiliary voltage and signal cables from the top (SINAMICS GM150 in the IGBT version)**

Given suitable installation conditions, option **M34** enables the auxiliary infeed and the signal cable to be introduced into the cabinet unit from the top.

##### Note:

Option **M34** requires that option **M32** (customer's terminal strip with spring-loaded terminals for signal cables up to 2.5 mm<sup>2</sup>) or **M33** (customer's terminal strip with screw terminals for signal cables up to 2.5 mm<sup>2</sup>) must be simultaneously ordered.

##### M36

##### **Brass cable entry for power cables (SINAMICS GM150, SINAMICS SM150 in IGCT version)**

With option **M36** the converter is supplied with a brass cable entry for the power cables.

For versions with single-core cables, option **M36** is required, so that no circulating currents form in the cable gland.

##### M42

##### **IP42 degree of protection (SINAMICS GM150 in the air-cooled IGBT version)**

With option **M42**, the degree of protection of the air-cooled converters can be enhanced (IP22 is standard). Additional close-meshed grilles where the air comes in and goes out prevent the ingress of solid matter with diameters > 1.0 mm.

##### M54

##### **IP54 degree of protection (SINAMICS GM150 in the water-cooled version and SINAMICS SM150 in the IGCT version)**

With option **M54**, the degree of protection of the water-cooled converters can be enhanced (IP43 is standard).

##### M61

##### **Redundant fan in the power unit (SINAMICS GM150 in the IGBT version)**

To improve system availability, it is possible to equip the converter with an additional redundantly operating fan. If a fan within the converter cabinet unit fails, this is immediately detected by the differential pressure detector in the cabinet and the redundant fan is activated by the converter controller without the converter and hence the drive system failing. This enables production down times or interruptions to be avoided and replacement of the faulty fan to be postponed until the next scheduled shut-down.

##### Note:

Option **M61** cannot be combined with option **L72** (Braking Module).

##### Note:

Option **M61** is not available for all converters.

For the following converters, the cabinet width must be increased by 600 mm:

| Rated voltage | Converter          |
|---------------|--------------------|
| 2.3 kV        | 6SL3810-2LM36-0AA0 |
|               | 6SL3810-2LM37-0AA1 |
|               | 6SL3810-2LM38-0AA1 |
| 3.3 kV        | 6SL3810-2LN36-0AA0 |
|               | 6SL3810-2LN37-0AA1 |
|               | 6SL3810-2LN38-0AA1 |
| 4.16 kV       | 6SL3810-2LP35-3AA1 |

For the following converters, the cabinet width must be increased by 600 mm and the air intake temperature must be limited to a maximum of +35 °C:

| Rated voltage | Converter          |
|---------------|--------------------|
| 4.16 kV       | 6SL3810-2LP36-0AA0 |
|               | 6SL3810-2LP37-0AA1 |
|               | 6SL3810-2LP38-0AA1 |

The following converters cannot be ordered with option M61:

| Rated voltage | Converter          |
|---------------|--------------------|
| 3.3 kV        | 6SL3810-2LN41-4AA1 |
| 4.16 kV       | 6SL3810-2LP41-1AA0 |
|               | 6SL3810-2LP41-2AA1 |
|               | 6SL3810-2LP41-4AA1 |

### Options

#### M64

#### **Converter prepared for connection to an external air discharge system, with internal cabinet fans (SINAMICS GM150 in the air-cooled IGBT version)**

Retaining the fans inside the cabinet unit ensures that the volume of cool air required for cooling can be supplied without any major distribution faults occurring. If the exhaust air is led in a duct system over long sections or even around bends, the pressure drop that arises in this duct system must be compensated by additional fans within the exhaust air system. Suitable "flange connections" for connecting the converter to an external exhaust air system are located in the roof part of the cabinet unit.

#### M66

#### **Suitable for marine use (SINAMICS GM150, water-cooled)**

With option **M66**, the version of the converter meets the requirements of the following classification organizations:

- Lloyds Register
- American Bureau of Shipping
- Germanischer Lloyd
- Bureau Veritas
- Det Norske Veritas
- Chinese Classification Society

Option **M66** includes a seawater-proof paint finish, a strengthened mechanical design of the cabinet, handrails below the operator panel and a mechanical locking system for the cabinet doors. The cabinet has degree of protection IP44, includes anti-condensation heating (option **L55**) and can be welded to the ship's structure to mount the converter.

#### Note:

For SINAMICS GM150 in the IGBT version, the cabinet has a reinforced base frame. This increases the cabinet height by 100 mm. (The cabinet in the IGCT version is already equipped with an appropriate base frame as standard).

#### Note:

With option **M66** the following ambient conditions in operation apply that are changed with respect to the standard values:  
Ambient temperature: 0 °C to 45 °C  
(derating must be taken into account)  
Relative air humidity: 5 % to 95 %

#### Note:

For SINAMICS GM150 in IGBT version, the combination with option **Y15** (sine-wave filter) on request.

#### Note:

If the converter is used for a safety-relevant drive ("essential service") on the ship, individual certification is additionally required (options **E11 to E71** see Page 6/12).

#### Terminal connection overview

When selecting option **M66**, an additional TM31 Terminal Module is required, which provides the additional digital and analog inputs/outputs. An overview is shown in the following table.

| Terminal strip on TM31 (=HC-A71) |         |  |  |         |   |
|----------------------------------|---------|--|--|---------|---|
| Terminal                         | Type    |  | Pre-assignment   | Comment |   |
| <b>X540:</b>                     |         |  |  |         |   |
| 1-8                              | P24     | 24 V DC supply for inputs DI0 to DI7                           | –  | –       |   |
| <b>X520:</b>                     |         |  |  |         |   |
| 1                                | DI0     | Digital input electrically isolated via optocoupler            | –  | –       |   |
| 2                                | DI1     |  | –  | –       |   |
| 3                                | DI2     |  | –  | –       |   |
| 4                                | DI3     |  | –  | –       |   |
| 5                                | M1      | Reference ground for digital inputs DI0 to DI3                 | –  | –       |   |
| 6                                | M       | Reference ground for P24, auxiliary voltage for digital inputs | –  | –       |   |
| <b>X530:</b>                     |         |  |  |         |   |
| 1                                | DI4     | Digital input electrically isolated via optocoupler            | –  | –       |   |
| 2                                | DI5     |  | –  | –       |   |
| 3                                | DI6     |  | –  | –       |   |
| 4                                | DI7     |  | –  | –       |   |
| 5                                | M2      | Reference ground for digital inputs DI4 to DI7                 | –  | –       |   |
| 6                                | M       | Reference ground for P24, auxiliary voltage for digital inputs | –  | –       |   |
| <b>X541:</b>                     |         |  |  |         |   |
| 1                                | P24     | 24 V DC supply for inputs/outputs DI/O8 to DI/DO11             | –  | –       |   |
| 2                                | DI/DO8  | Digital inputs/digital outputs non-isolated                    | –  | –       |   |
| 3                                | DI/DO9  |  | –  | –       |   |
| 4                                | DI/DO10 |  | –  | –       |   |
| 5                                | DI/DO11 |  | –  | –       |   |
| 6                                | M       |  | Reference ground for P24, ground of digital inputs/digital outputs | –       | – |
|                                  |         |  |  | –       | – |

# Description of options

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Options

| Terminal strip on TM31 (=HC-A71) |          |   |   |
|----------------------------------|----------|---|---|
| Terminal                         | Type     |   | Preassignment<br>Comment                              |

#### M78

**Power cables at the converter output are connected from the top (SINAMICS GM150 in the IGBT version)**

Given suitable installation conditions, option **M78** enables the motor-side power cable to be introduced into the cabinet unit from the top.

Option **M78** includes option **M13** (power cable connection at the converter input from the top).

#### Notice:

Option **M78** increases the cabinet width by 600 mm. When simultaneously selecting option **L08** (output reactor) or **Y15** (sine-wave filter) the width does not increase. In the case of option **Y15**, the dimensions in the Technical specifications apply.

#### N06 to N08

**Capacitor Modules to increase the DC link capacitance (SINAMICS SM150 in IGCT version)**

With options **N06 to N08** the converter is shipped with Capacitor Modules to increase the DC link capacitance. The increase for each sub DC link is 6, 12 or 18 mF.

#### Note:

Options **N06 to N08** are only available for the basic and parallel connections with order numbers 6SL3845-7NN42-2AA0, 6SL3845-7NN44-5AA0 and 6SL3845-7NN46-7AA0. They are not available for DC bus configurations.

With these options, the cabinet width per converter unit is increased (see the following table).

| Number of Capacitor Modules | Option     | Additional cabinet width per converter unit | DC link capacitance per sub DC link |
|-----------------------------|------------|---|-------------------------------------|
| 0                           | –          | –   | 12 mF                               |
| 1                           | <b>N06</b> | 970 mm                                      | 18 mF                               |
| 2                           | <b>N07</b> | 1940 mm                                     | 24 mF                               |
| 3                           | <b>N08</b> | 2910 mm                                     | 30 mF                               |

### Options

#### N13

**Circuit breaker at the converter input (SINAMICS GM150, for 24-pulse Basic Line Module on request; not available for the IGCT version with converter units operated in parallel; SINAMICS SM150 in the IGCT version on request)**

Option **N13** provides integrated circuit breakers. Option **N13** is particularly important in the retrofit business where existing circuit breakers do not meet requirements (tripping times, low-voltage coil). The circuit breakers are installed below the Basic Line Module in the converter cabinet and are thus located on the secondary side of the line-side transformer.

#### Notice:

Option N13 increases the width of the cabinet as follows:

- SINAMICS GM150 in the IGBT version: 600 mm
- SINAMICS GM150 in the IGCT version: 2 × 700 mm

#### Note:

In conjunction with option **C55** (auxiliary power supply for open-loop and closed-loop control), as well as for converters with 24-pulse Basic Line Module, for option **N13** a special request is required.

#### N15

##### 24-pulse Basic Line Module (SINAMICS GM150)

For particularly high requirements regarding low line harmonics, the power units of voltage ranges 2.3 kV, 3.3 kV and 4.16 kV can be equipped with a 24-pulse Basic Line Module. (circuit version (2) for IGBT version, circuit version (8) for IGCT version).

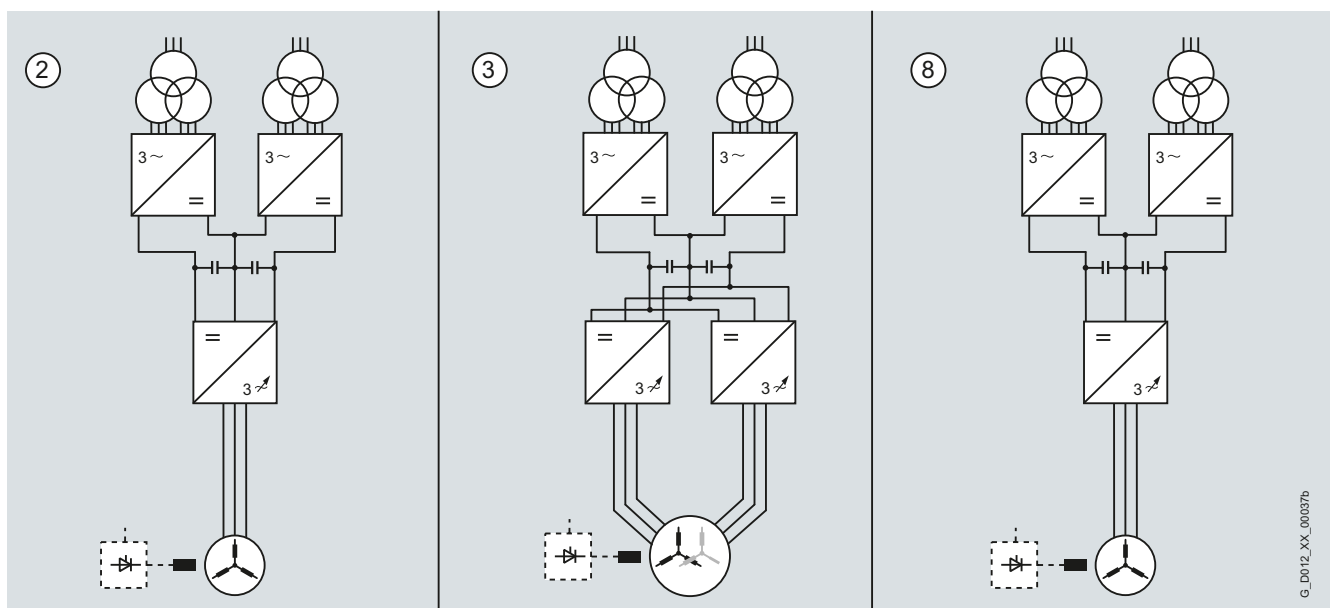

Converters with higher power ratings with power units connected in parallel can also be operated without this 24-pulse option (circuit version (3)). The converter transformer required at the medium-voltage level must be designed as a five-winding transformer, or else two two-tier transformers must be provided. Vector groups and winding offsets must be appropriately engineered.

#### Notice:

With the option **N15** the width of the converter cabinet for SINAMICS GM150 as IGBT version increases by 600 mm.

#### Note:

For SINAMICS GM150 in the IGCT version, option **N15** cannot be combined with option **L72** (Braking Module), and a request is required in conjunction with option **L48** (make-proof grounding switch at the converter input).

- (2) SINAMICS GM150 in IGBT version, basic circuit 2.3 kV to 4.16 kV (Option **N15**)  
 (3) SINAMICS GM150 in IGBT version, parallel connection 2.3 kV to 4.16 kV (24-pulse infeed as standard)  
 (8) SINAMICS GM150 in IGCT version (option **N15**)

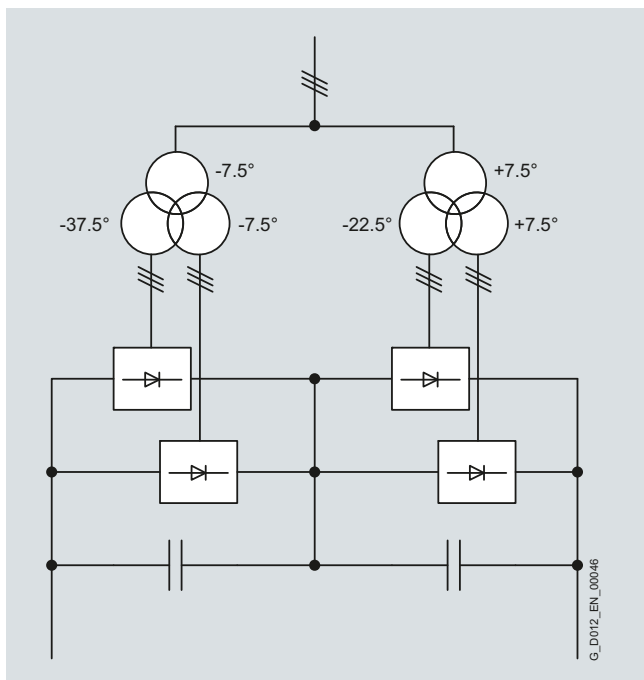

# Description of options

## SINAMICS GM150, SINAMICS SM150

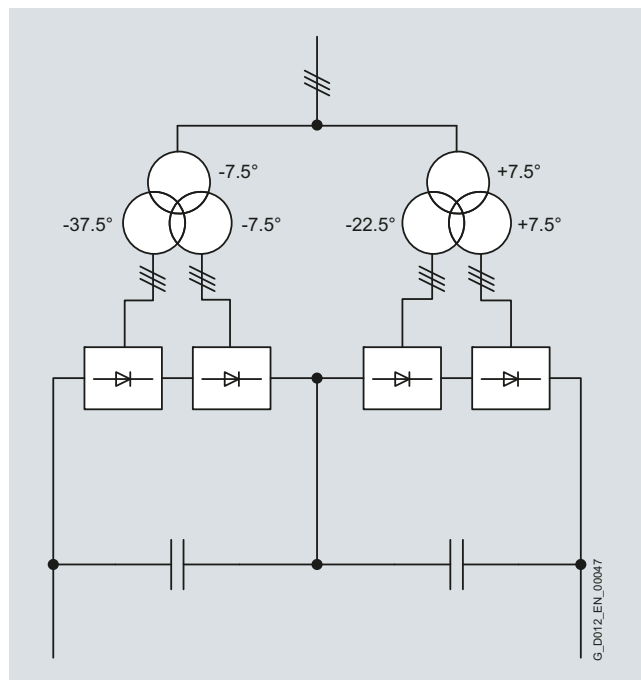

### Description of options

#### Options

The circuit for the 24-pulse infeed is implemented in different ways for SINAMICS GM150 in the IGBT version and in the IGCT version. The two following diagrams should clearly show the principle difference between the parallel connection (for IGBT) and the series connection (for IGCT). The Basic Line Modules (each with two diode rectifiers) are supplied from two 3-winding transformers with  $\pm 7.5^\circ$  shift on the primary side. 12-pulse operation applies as a result of the  $30^\circ$  phase shift between the two rectifiers of a DC link half. For the same load of the halves, 24-pulse operation is achieved as the infeeds of the two DC link halves are phase shifted through  $15^\circ$  with respect to one another. In the case of IGBTs, the deviation of the secondary voltage of a transformer under load conditions may be a maximum of 1 %.

SINAMICS GM150 in the IGBT version, 24-pulse infeed by connecting two Basic Line Modules in parallel (absolute values of the individual phase shift angles as example only)

SINAMICS GM150 in the IGCT version, 24-pulse infeed by connecting two Basic Line Modules in series (absolute values of the individual phase shift angles as example only)

### Options

#### N20

##### 110 V to 120 V DC capacitor tripping device (SINAMICS GM150 in the IGBT version)

The capacitor tripping device is used if the existing circuit breaker has no undervoltage coil and cannot be retrofitted with one.

It is installed in the converter and has the following functions:

- Monitoring of the auxiliary voltage supply of the circuit breaker on the plant side
- Monitoring of the own internal voltage supply
- Locking of the circuit breaker in the open position if there is insufficient voltage

The capacitor tripping device ensures that the circuit breaker on the plant side can still be safely opened even if there is a power failure or the normal OPEN command is not effective, e.g. because of wire breakage.

#### N21

##### 230 V DC capacitor tripping device (SINAMICS GM150 in the IGBT version)

The capacitor tripping device is used if the existing circuit breaker has no undervoltage coil and cannot be retrofitted with one.

It is installed in the converter and has the following functions:

- Monitoring of the auxiliary voltage supply of the circuit breaker on the plant side
- Monitoring of the own internal voltage supply
- Locking of the circuit breaker in the open position if there is insufficient voltage

The capacitor tripping device ensures that the circuit breaker on the plant side can still be safely tripped even if there is a power failure or the normal OFF command is not effective, e.g. because of a wire break.

#### N22

##### Switch on the input side (static excitation unit, see Accessories, Chapter 7)

When option **N22** is chosen, a circuit breaker which is controlled by the static excitation unit itself is integrated on the input side. On the variants for brushless reverse field excitation this circuit breaker is configured as a contactor, on the variants for slipping excitation as a disconnecter.

##### Note:

If this circuit breaker is not available, an external circuit breaker must be provided.

#### N30 to N33

##### Controlled motor feeder for auxiliaries 400 V 3 AC/480 V 3 AC

An outgoing feeder for the operation of external auxiliary equipment, e.g. separate fans on the motor or pumps/oil supplies, is available in the converter. It is controlled and is fused by motor circuit breakers. The voltage supply required for the drive must be provided from an external source.

Depending on the drive output that is required, four different outgoing feeders are available.

The contactor is closed with the **ON** command at the converter and opened with the **OFF** command.

| Option     | Description  |
|------------|--|
| <b>N30</b> | Controlled motor feeder for auxiliaries<br>50 Hz 400 V 3 AC, max. 4 kW or<br>60 Hz 480 V 3 AC, max. 4.8 kW<br>( $\cos \varphi = 0.8$ ; setting range of the motor circuit breaker from 9 A to 12.5 A)  |
| <b>N31</b> | Controlled motor feeder for auxiliaries<br>50 Hz 400 V 3 AC, max. 7 kW or<br>60 Hz 480 V 3 AC, max. 8 kW<br>( $\cos \varphi = 0.8$ ; setting range of the motor circuit breaker from 14 A to 20 A)     |
| <b>N32</b> | Controlled motor feeder for auxiliaries<br>50 Hz 400 V 3 AC, max. 11 kW or<br>60 Hz 480 V 3 AC, max. 12.7 kW<br>( $\cos \varphi = 0.8$ ; setting range of the motor circuit breaker from 18 A to 25 A) |
| <b>N33</b> | Controlled motor feeder for auxiliaries<br>50 Hz 400 V 3 AC, max. 15 kW or<br>60 Hz 480 V 3 AC, max. 17.5 kW<br>( $\cos \varphi = 0.8$ ; setting range of the motor circuit breaker from 28 A to 40 A) |

##### Note:

Other voltages are also possible according to the ratings in question.

##### Note:

It is not possible to combine several options (**N30 to N33**).

| Auxiliary voltage infeed | Outgoing feeder for auxiliaries | Protective circuit breaker external power supply ON |                             |
|--------------------------|---------------------------------|---|-----------------------------|
| = GC-X1:1 L1             | = GC-X1:4 L1                    | = GC-X2:1   | Relay contact, max. 60 V DC |
| = GC-X1:2 L2             | = GC-X1:5 L2                    | = GC-X2:2   |                             |
| = GC-X1:3 L3             | = GC-X1:6 L3                    |   |                             |

# Description of options

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Options

##### N35 to N38

##### Controlled outgoing feeder for auxiliaries 230 V 1 AC/120 V 1 AC

A controlled outgoing feeder protected by miniature circuit breakers is available in the converter for controlling external auxiliaries, e.g. the anti-condensation heating for the motor. The infeed required for the voltage supply, e.g. the anti-condensation heating, must be provided externally.

Depending on the output that is required, four different outgoing feeders are available.

The contactor is opened with the **ON** command at the converter and closed with the **OFF** command.

| Option     | Description   |
|------------|---|
| <b>N35</b> | Controlled outgoing feeder for auxiliaries<br>50 Hz 230 V 1 AC, max. 1.2 kW or<br>60 Hz 120 V 1 AC, max. 1 kW   |
| <b>N36</b> | Controlled outgoing feeder for auxiliaries<br>50 Hz 230 V 1 AC, max. 2.2 kW or<br>60 Hz 120 V 1 AC, max. 1.5 kW |
| <b>N37</b> | Controlled outgoing feeder for auxiliaries<br>50 Hz 230 V 1 AC, max. 3.5 kW or<br>60 Hz 120 V 1 AC, max. 2.1 kW |
| <b>N38</b> | Controlled outgoing feeder for auxiliaries<br>50 Hz 230 V 1 AC, max. 4.5 kW or<br>60 Hz 120 V 1 AC, max. 2.8 kW |

##### Note:

It is not possible to combine several options (**N35 to N38**).

| Auxiliary voltage infeed | Outgoing feeder for auxiliaries | Protective circuit breaker external power supply ON | Relay contact, max. 60 V DC |
|--------------------------|---------------------------------|---|-----------------------------|
| = GC-X1:7 L1             | = GC-X1:9 L1                    | = GC-X2:3   |                             |
| = GC-X1:8 N              | = GC-X1:10 L2                   | = GC-X2:4   |                             |

##### Q80 to Q85

##### Extension of the liability for defects

For a description, refer to services and documentation, Pages 10/12 and 10/13.

##### S05

##### Basic configuration (SINAMICS SM150)

Option **S05** provides a system-specific software configuration, which is absolutely necessary for the correct functioning of the SINAMICS SM150 converter system. If option **S05** is not selected, then a system integrator must carry out this basic configuration.

The basic configuration includes:

- Connection of the static excitation unit via PROFIBUS
- Operation of the SIMATIC OP 177B operator panel
- Signal marshaling to connect to the basic automation (e.g. ON/OFF or fault signals from Motor Modules)

##### T58, T60, T80, T85, T90, T91

##### Rating plate languages

The rating plate is normally supplied in two languages (English/German). Other languages can be ordered using the codes below.

| Option     | Description                                     |
|------------|---|
| <b>T58</b> | Rating plate in English/French                  |
| <b>T60</b> | Rating plate in English/Spanish                 |
| <b>T80</b> | Rating plate in English/Italian                 |
| <b>T82</b> | Rating plate in English/Portuguese (on request) |
| <b>T85</b> | Rating plate in English/Russian (on request)    |
| <b>T86</b> | Rating plate in English/Polish (on request)     |
| <b>T90</b> | Rating plate in English/Japanese (on request)   |
| <b>T91</b> | Rating plate in English/Chinese (on request)    |

##### Note:

It is not possible to combine several options (**T58 to T91**).

### Options

#### W02

##### **Cooling unit with redundant stainless steel plate-type heat exchangers (for water cooling)**

The cooling unit is used to dissipate the power loss from the converter and consists of two cooling circuits: the internal cooling circuit with deionized water and the external raw water circuit for dissipating the power loss. In the standard version the internal cooling circuit has two redundant circulating pumps and one stainless steel plate-type heat exchanger. With option **W02**, a second stainless steel plate-type heat exchanger is integrated to enable fully redundant operation.

#### W11

##### **Cooling unit with a titanium plate-type heat exchanger (for water cooling)**

If the raw water specified in the Technical specifications is not available for the cooling unit, option **W11** must be selected. This is required in the case of aggressive raw water such as sea-water, for instance. With option **W11**, a titanium plate-type heat exchanger is installed instead of the stainless steel plate-type heat exchanger. The three-way valve for preventing condensation and the necessary pipe connections are still made from stainless steel.

##### Notice:

When option **W11** is chosen, the piping on the raw water side is manufactured of stainless steel and not titanium.

#### W12

##### **Cooling unit with redundant titanium plate-type heat exchangers (for water cooling)**

With option **W12**, two completely redundant titanium plate-type heat exchangers are integrated for the internal cooling circuit (other characteristics as described under option **W11**).

##### Notice:

When option **W12** is chosen, the piping on the raw water side is manufactured of stainless steel and not titanium.

#### W14

##### **Converter without cooling unit. This must be provided on the plant side (for water cooling)**

When option **W14** is chosen, the water-cooled converter is supplied without a cooling unit. The necessary cooling system must be provided on the plant side.

##### Note:

Option **W14** reduces the width and weight of the cabinet (data available on request).

#### W20

##### **Raw-water connection from the bottom (SINAMICS GM150 in the IGBT version)**

Option **W20** enables the raw water for the cooling unit to be supplied from the bottom through the cabinet floor with a flange connection. The necessary mating flanges are included as a pack with the cooling unit.

##### Note:

With water-cooled IGBT converters, the raw water is supplied to the cooling unit through the side panel from the left-hand side. For converters in IGCT technology, the raw water is connected at the cooling unit from the bottom.

#### Y05

##### **Customer-specific rating plate**

With option **Y05** the data on the rating plate can be adapted for the specific plant or system, depending on the ambient conditions such as installation altitude or ambient temperature. This also involves data regarding the rated voltage, rated current and the frequency range at the converter output. The maximum values of the adapted rating plate are defined by the values of the standard rating plate, which correspond to the catalog data.

#### Y09

##### **Special paint finish according to RAL...**

Converters are normally supplied in RAL 7035 (light gray). With option **Y09** a special color can be ordered by specifying plain text.

##### Note:

For SINAMICS GM150 in the air-cooled version, the following applies: The fans still have the standard RAL 7035 color even when the cabinet has a special paint finish.

#### Y10

##### **Customer-specific circuit diagrams**

The circuit diagrams are given customized headers.

The data for the header must be specified in plain text (up to three lines, with 45 characters per line).

# Description of options

## SINAMICS GM150, SINAMICS SM150

### Description of options

#### Options

##### Y15

##### **Sine-wave filter (SINAMICS GM150 in the IGBT version and SINAMICS SM150 in the IGBT version on request)**

Sine-wave filters are required for the following applications:

- When operating old motors (retrofit)
- When operating third-party motors without taking supplementary measures for converter operation

The sine-wave filters supply the motors with almost sinusoidal motor currents and voltages so that line motors can be operated. The sine-wave filter operates optimally for motors with a rated frequency of 50 Hz or 60 Hz. It should be noted that only driven loads with a square-law load torque may be operated (e.g. pumps, fans). The output frequencies used in operation can lie in the range between 30 Hz and 66 Hz.

A field weakening range of 1:1.1 is permissible (max. 55 Hz for 50 Hz motors and max. 66 Hz for 60 Hz motors).

When sine-wave filters are used, the voltage harmonic distortion at an output frequency of 50 Hz is less than 5 %.

If the sine-wave filter is used, the output of the converter must be reduced (see [Technical specifications](#)).

##### Note:

The rated motor current, the motor current in the operating point and the motor no-load current must be given in plain text when ordering filters.

| Converter                               | Max. cable lengths   |               |  |                           |
|---|--|---------------|--|---------------------------|
|   | Without sine-wave filter (standard)  |               | With sine-wave filter <sup>1)</sup> (option Y15) |                           |
|   | Shielded   | Un-shielded   | Shielded   | Un-shielded <sup>2)</sup> |
| <b>Output voltage 2.3 kV to 4.16 kV</b> |  |               |  |                           |
| SINAMICS GM150 as IGBT version          | Up to 2 parallel cables: 100 m<br>3 parallel cables: 80 m<br>>3 parallel cables: Not permitted | Not permitted | 1000 m   | 1000 m                    |

##### Note:

Option **Y15** increases the width of the cabinet unit (for dimensions see [Technical specifications](#)).

##### Y17

##### **Line reactor (static excitation unit, see Accessories, Chapter 7)**

With the option **Y17** a line reactor is integrated to protect against excessive harmonic currents and to limit the circuit feedbacks. The exact values for the reactor must be given in plain text as they are dependent on the supplying network.

##### Y40

##### **Raw water data deviating from the catalog data (with water cooling, on request)**

With option **Y40**, raw water whose data does not conform to the Technical specifications can also be used with water-cooled converters (for specifications, see [Cooling unit, Pages 9/8 and 9/9](#)). Deviations from the values indicated in the specification must be clarified in advance.

##### Y73

##### **Braking resistor (SINAMICS SM150 on request only)**

The braking resistor is connected to the Braking Module (option **L72**) via two connections (SINAMICS GM150 in the IGBT version) or three connections (SINAMICS GM150 in the IGCT version and SINAMICS SM150 in the IGCT version). For dimensioning, refer to the [Table in the description for option L72, Page 6/27](#).

##### Notice:

The power loss of the braking resistor must be taken into account when dimensioning the room or the area in which the converters is mounted. If required, the braking resistor should be mounted outside the room/area. The braking resistor is equipped with a temperature monitor. This must be connected up so that when it responds, the converter is shut down. Regarding inductance  $L$ , the following requirements apply to the braking resistor and cable routing: The time constant  $L/R$  must not exceed 20  $\mu$ s, i.e.  $L$  must be less than  $R \times 20 \mu$ s.

The signal cables to the temperature monitoring and the power cable are not included in the scope of supply.

##### Note:

When ordering, the following data must be specified in plain text: max. rated power, braking duration and cycle. The Technical specifications are obtained, based on this data (for example, dimensions, weight), whereby the following basic data apply to all resistors:

- Degree of protection IP20, with perforated sheet steel roof section manufactured out of V2A steel
- Cooling using an internal fan
- Digital feedback signal from the air flow switch and temperature switch
- Mounted outside the converter, in electrical rooms and areas
- Ambient temperature: max. converter ambient temperature
- Enclosure, painted, RAL 7035

<sup>1)</sup> Distance between the converter and the motor depending on the current load for max. 6 three-wire EMC cables connected in parallel.

<sup>2)</sup> Armored cables are recommended.

# Accessories

## SINAMICS GM150, SINAMICS SM150

### Accessories for grounding and short-circuiting the converter

#### Overview

#### **Accessories for grounding and short-circuiting the converter for commissioning and maintenance work**

For safety reasons, devices for grounding and short-circuiting the converter are required for work on the converter in the de-energized state (EN 61230/VDE 0683-100 (IEC 61230)). They are required for commissioning or service work, for example, as well as for replacing fans or Power cards/phase modules.

As some of this work has to be performed by operator personnel with the relevant training, the specified tools must be available on the equipment. If these devices are not available, the work must not be performed due to the electrical hazards.

In the case of SINAMICS GM150 and SINAMICS SM150, spherical grounding points are fitted on the input and output side in the area of the connecting bar which can be short-circuited and grounded with an appropriate three-pole grounding device (grounding harness).

As a rule, this must be done in the de-energized state for all work (in the case of converters with a power unit connected in parallel at both infeed points or motor feeders).

If appropriate devices are not available on the equipment, the relevant converter accessories must be supplied in the requisite quantity.

Please note in this case that the number of three-pole grounding devices required is dependent on the number of infeeding three-phase current systems. One grounding device per three-phase current system is required.

If there is a risk of power being fed from the motor side back into the converter, one grounding device per three-phase current system must be fitted here as well.

#### Selection and ordering data

| Description   | Order No.            |
|---|----------------------|
| <b>Grounding bar</b><br>1000 mm, to connect the grounding device  | <b>6SY8101-0AB54</b> |
| <b>Three-pole grounding device</b><br>(grounding harness) for 20 mm spherical grounding points for grounding and short-circuiting the DC link | <b>6SY8101-0AB55</b> |
| <b>Three-pole grounding device</b><br>(grounding harness) with universal terminals  | <b>6SY8101-0AB58</b> |

### Static excitation units

#### Overview

The following versions are available as static excitation units for SINAMICS GM150 and SINAMICS SM150:

- Static excitation unit for separately excited synchronous motors with brushless rotating reverse-field excitation
- Static excitation unit for separately excited synchronous motors with slipring excitation

### Accessories for replacing phase modules

#### Overview

#### **Accessories for replacing phase modules (SINAMICS GM150 in the IGCT version and SINAMICS SM150 in the IGCT version)**

The phase modules of the converters with IGCT power semiconductors (SINAMICS GM150 in the IGCT version and SINAMICS SM150 in the IGCT version) can be completely replaced by trained personnel. To replace, the entire phase module must be extracted from the converter using a special lifting tool and transported on a stacker truck.

#### Selection and ordering data

| Description                                    | Order No.                 |
|--|---------------------------|
| <b>Contact spray</b>                           | <b>6SC8476-1DA00-0AA0</b> |
| <b>Forklift truck</b><br>RHM23 standard        | <b>6SC8476-1EA00-0AA0</b> |
| <b>Replacement equipment</b><br>(roller track) | <b>6SL3986-6YX00-0AA0</b> |

Control with both versions is performed by the converter through a PROFIBUS interface.

**A static excitation unit must always be ordered together with the converter but it has its own order number. Add "-Z" to the order number of the converter and specify the code E01 or E02. The static excitation unit cannot be ordered on its own.**

#### Note:

The option **G30** (PROFIBUS master) must also be ordered in conjunction with SINAMICS GM150.

## SINAMICS GM150, SINAMICS SM150

Static excitation units  
for brushless rotating reverse-field excitation

### Selection and ordering data

| Rated current<br>A                   | Comment   | Static excitation unit<br>Order No. |
|--------------------------------------|---|-------------------------------------|
| <b>For supply voltage 500 V 3 AC</b> |   |                                     |
| 130                                  | –   | <b>6RN7030-1RH31-3AA0</b>           |
| 250                                  | –   | <b>6RN7030-2RH32-5AA0</b>           |
| 250                                  | Can only be ordered together with option <b>M66</b> (suitable for marine applications). | <b>6RN7031-1RH32-5AA0-Z M66</b>     |
| <b>For supply voltage 690 V 3 AC</b> |   |                                     |
| 130                                  | –   | <b>6RN7030-1RF31-3AA0</b>           |
| 250                                  | –   | <b>6RN7030-2RF32-5AA0</b>           |
| 250                                  | Can only be ordered together with option <b>M66</b> (suitable for marine applications). | <b>6RN7031-1RF32-5AA0-Z M66</b>     |

### Accessories

| Designation  | Order No.                 |
|--|---------------------------|
| <b>PROFIBUS connecting cable between the basic unit and static excitation unit</b> |                           |
| <b>PROFIBUS cable</b>  | <b>6XV1830-0EH10</b>      |
| <b>Connector for PROFIBUS</b>  |                           |
| • Without PG/PC connection   | <b>6ES7972-0BA41-0XA0</b> |
| • With PG/PC connection  | <b>6ES7972-0BB41-0XA0</b> |

### Options

When ordering a device with options, add "-Z" to the order number of the device, followed by the order code(s) for the desired option(s).

In the following tables, related options are arranged in groups. Whether the options can be combined or are mutually exclusive is indicated within these groups. A detailed description of the options can be found in Chapter 6.

| Input-side options  |            |
|---|------------|
| Circuit breaker on input side (configured as a contactor) | <b>N22</b> |
| Output-side options                                       |            |
| Disconnecter at the output for redundancy <sup>1)</sup>   | <b>L51</b> |

<sup>1)</sup> Option **L51** can only be ordered in conjunction with option **M66** (suitable for marine applications).

| Connection of power and signal cables                                       |            | M13 | M78 | M34 |
|---|------------|-----|-----|-----|
| Power cable connected at the input from the top (on request) <sup>1)</sup>  | <b>M13</b> |     | ✓   | ✓   |
| Power cable connected at the output from the top (on request) <sup>1)</sup> | <b>M78</b> | ✓   |     | ✓   |
| Auxiliary voltage and signal cables connected from the top                  | <b>M34</b> | ✓   | ✓   |     |

<sup>1)</sup> If options **M13** and/or **M78** are selected, then an additional cabinet (width 600 mm × depth 600 mm) is required.

|   |                                |
|---|--------------------------------|
| ✓ | Options can be combined        |
| – | Options are mutually exclusive |

### Accessories

| Designation  | Order No.                 |
|--|---------------------------|
| <b>PROFIBUS connecting cable between the basic unit and static excitation unit</b> |                           |
| <b>PROFIBUS cable</b>  | <b>6XV1830-0EH10</b>      |
| <b>Connector for PROFIBUS</b>  |                           |
| • <u>Without</u> PG/PC connection  | <b>6ES7972-0BA41-0XA0</b> |
| • <u>With</u> PG/PC connection   | <b>6ES7972-0BB41-0XA0</b> |

#### Note:

The slipring excitation units can be ordered with a SINAMICS DC MASTER power unit on request.

### Options

When ordering a device with options, add "**-Z**" to the order number of the device, followed by the order code(s) for the desired option(s).

In the following tables, related options are arranged in groups. Whether the options can be combined or are mutually exclusive is indicated within these groups. A detailed description of the options can be found in Chapter 6.

| Input-side options   |            | N22 | Y17 |
|--|------------|-----|-----|
| Circuit breaker on input side <sup>1)</sup> (configured as a disconnecter) | <b>N22</b> |     | ✓   |
| Line reactor <sup>2)</sup> (plain text is required)                        | <b>Y17</b> | ✓   |     |

<sup>1)</sup> Option **N22** is not available for the compact static excitation unit 6RN7011-3SE41-2AA0. In this case a circuit breaker must be provided on the plant side.

<sup>2)</sup> Option **Y17** is not available for the static excitation units 6RN7011-3SE41-2AA0 and 6RN7011-0SJ42-0AA0. With option **Y17**, the cabinet size can vary – depending on the reactor.

|   |                                |
|---|--------------------------------|
| ✓ | Options can be combined        |
| – | Options are mutually exclusive |

### Static excitation units for slipping excitation

#### Options

| Protective functions                         |     | L21 | L87 |
|--|-----|-----|-----|
| Overvoltage protection AC <sup>1)</sup>      | L21 |     | ✓   |
| Isolation monitoring device for rotor system | L87 | ✓   |     |

<sup>1)</sup> Option **L21** is not available for the compact static excitation unit 6RN7011-3SE41-2AA0. In this case, AC overvoltage protection must be provided on the plant side. Otherwise a connection voltage of 200 V must not be exceeded.

| Enhanced protection for cabinet units |     | M11 | M43 |
|---------------------------------------|-----|-----|-----|
| Dust protection                       | M11 |     | –   |
| IP43 degree of protection             | M43 | –   |     |

| Connection of power and signal cables  |     | M13 | M78 | M34 |
|--|-----|-----|-----|-----|
| Power cable connected at the input from the top <sup>1)</sup><br>(on request)  | M13 |     | ✓   | ✓   |
| Power cable connected at the output from the top <sup>1)</sup><br>(on request) | M78 | ✓   |     | ✓   |
| Auxiliary voltage and signal cables connected from the top                     | M34 | ✓   | ✓   |     |

<sup>1)</sup> If options **M13** and/or **M78** are selected, then an additional cabinet (width 600 mm × depth 600 mm) is required.

| PROFIBUS communication (SINAMICS GM150) |     |
|---|-----|
| PROFIBUS master                         | G30 |

| Industry-specific options                      |     |
|--|-----|
| Suitable for marine applications <sup>1)</sup> | M66 |

<sup>1)</sup> Option **M66** is only available for version 6RN7011-5SE34-0AA0-Z.

## SINAMICS GM150, SINAMICS SM150

### STARTER commissioning tool

#### Overview

The user-friendly STARTER commissioning tool can be used for:

- Commissioning
- Optimization
- Diagnostics

This software can be operated either as a standalone PC application, integrated in SIMATIC STEP 7 with TIA compatibility via Drive ES Basic, or it can be integrated into the SCOUT engineering system (for SIMOTION). The basic functions and handling are the same in both cases.

In STARTER, MICROMASTER 4 devices are also supported in addition to the SINAMICS drives.

The project wizards can be used to create the drives within the structure of the project tree.

Beginners are supported by solution-based dialog guidance, whereby a standard graphics-based display maximizes clarity when setting the drive parameters.

First commissioning is guided by a wizard which makes all the basic settings in the drive. Therefore, getting a motor up and running is merely a question of setting a few of the drive parameters as part of the drive configuration process.

The individual settings required are made using graphics-based parameterization screens, which also precisely visualize the principle of operation of the drive.

Examples of individual settings that can be made include:

- How terminals are used
- Bus interface
- Setpoint channel (e.g., fixed setpoints)
- Closed-loop speed control (e.g., ramp-function generator, limits)
- BICO interconnections
- Diagnostics

For experts, the expert list can be used to specifically and quickly access individual parameters at any time. An individual compilation of frequently used parameters can be saved in dedicated user lists and watch tables.

In addition, the following functions are available for optimization purposes:

- Self-optimization of the controller settings (depending on drive unit)
- Trace  
(depending on the drive unit, this is not supported for)
  - MICROMASTER 4
  - SINAMICS G110
  - SINAMICS G120 < FW V4.4
  - SINAMICS G110D
  - SINAMICS G120D)

Diagnostics functions provide information about:

- Control/status words
- Parameter status
- Operating conditions
- Communication states

#### Performance features

- User-friendly: only a small number of settings need to be made for successful first commissioning: the motor starts to rotate
- Solution-oriented dialog-based user guidance simplifies commissioning
- Self-optimization functions reduce manual effort for optimization

### Engineering software Drive ES

#### Overview

Drive ES is the engineering system used to integrate Siemens drive technology into the SIMATIC automation world easily, efficiently and cost-effectively in terms of communication, configuration and data management.

It is based on the operator interface of the STEP 7 Manager, the essential element when it comes to engineering.

#### Drive ES Basic

Drive ES Basic is for first-time users of the world of Totally Integrated Automation and the basic software for setting the parameters of all drives online and offline in this environment. Drive ES Basic enables both the automation system and the drives to be handled using the SIMATIC Manager software. Drive ES Basic is the starting point for common data archiving for complete projects and for extending the use of the SIMATIC teleservice to drives. Drive ES Basic provides the configuration tools for the new Motion Control functions – slave-to-slave communication, equidistance and isochronous operation with PROFIBUS DP and ensures that drives with PROFINET IO are simply integrated into the SIMATIC environment.

More information is available on the Internet at:  
<http://www.siemens.com/drivesolutions>

\* Orders are always automatically supplied with the latest SP.

#### Overview

The SIMOTION SCOUT engineering system provides important new features in version V4.2 and higher. The focus is on an improved connection of the SINAMICS S120 drive system, the completion of the comparison functionality and many usability improvements.

#### Improved connection to SINAMICS S120

The most important innovation in the SIMOTION SCOUT engineering system is the significantly simplified connection to the SINAMICS S120 drive system. Drives and their components are integrated automatically to the greatest possible extent. The connections to the drive objects are simply interconnected, whereby the required message frame generation is performed automatically by the engineering system.

#### Uniform display of lists

The display of all lists in the system has now been simplified and adapted to the well-known look and feel of Office applications. The highest possible data security was observed during the implementation. If there are any operation faults (e.g. faulty copy and paste), the system restores the data. In this way, even beginners can become familiar with the engineering software, intuitively, quickly and safely.

#### System trace across several motion controllers

The so-called system trace feature is available for analysis or system optimization. This enables up to 128 signals from SIMOTION controllers networked via PROFINET to be recorded synchronously.

#### Trace for technology objects

With the new TO trace, all events affecting a technology object can be recorded in real-time and displayed in detail in a chronological sequence in the engineering system.

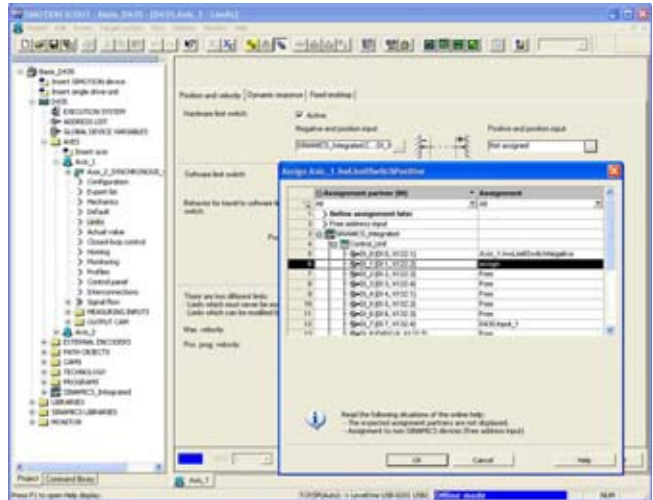

#### New watch tables

The new watch tables provide extended functions and diagnostic options. They allow different variables of the project (also different devices) to be collected. The watch tables can be clearly displayed and controlled with current values. Stored control value tables can also be used to perform comprehensive test sequences quickly and easily.

#### Easier to use during programming

Greater clarity is provided in the general programming through small additions such as the display of the variable type, display of the current value when there is an online connection and language-dependent comments which appear when the cursor is moved over the code ("tooltips").

Rollout tips provide the user with information on faulty entries or system information that is still missing when working in tables or entry fields. The system-wide effective automatic completion of user entries ("Auto-Complete") with automatic correction of upper/lower case makes the editing process more efficient and provides an easily readable program code.

Simple interconnection of the drive I/Os

#### Scope of supply

##### SIMOTION SCOUT engineering software

- SCOUT with corresponding license
- License key for SCOUT
- Integrated STARTER commissioning tool

##### Optional packages for SIMOTION SCOUT

- Optional Drive Control Chart (DCC) package without license  
The license must be ordered separately.

##### Documentation

- Complete SIMOTION documentation on DVD

##### Other software

- SIMOTION – Utilities & Applications  
Free utilities (e.g. calculation tools, optimization tools, etc.) and application examples (ready-to-apply solutions such as winders, cross cutters or handling) as well as the project generator SIMOTION easyProject
- SIMATIC NET without license
- DriveES Basic with license
- SIMATIC software:  
with SCOUT stand-alone, the necessary components of STEP 7

# Accessories

## SINAMICS GM150, SINAMICS SM150

### SIMOTION SCOUT V4.2 software package

#### Overview

##### **Integrated STARTER commissioning tool**

The STARTER commissioning tool is directly integrated in SCOUT. It supports the simple and rapid commissioning, optimization and diagnostics of all new-generation Siemens drives with only one tool.

STARTER supports the drives:

- SINAMICS
- MICROMASTER 420/430/440
- MICROMASTER 411/COMBIMASTER 411
- COMBIMASTER

##### **SIMOTION SCOUT stand-alone software package**

If STEP 7 is not installed, the SIMOTION SCOUT stand-alone software package can be used. It also contains the components of STEP 7 that are required for SIMOTION SCOUT as well as the license key for SCOUT stand-alone. It is not possible to operate the SCOUT and SCOUT stand-alone software packages on the same machine.

##### **SIMOTION Kernel updates**

SIMOTION Kernel updates for all SIMOTION platforms are supplied on DVD and can then be copied from the PG/PC to the SIMOTION Micro Memory Card (C2xx) or SIMOTION CompactFlash card (SIMOTION D) or installed on the P350-3.

A PC card adapter is needed to write to the SIMOTION MMC (Micro Memory Card) or the SIMOTION CF (CompactFlash card).

Adapters can usually be found in PC shops and at electronics shops.

#### Benefits

- Time saving and reduction of faulty entries through automatic generation of the PROFIdrive message frames by the engineering.
- Comparison function allows the simple comparison of programs. Existing programs can therefore be simply merged.
- Improved system and error diagnostics through numerous extensions for the test and diagnostic functions within the engineering environment.
- Quicker and simpler program creation through extended editor functions and easier-to-read programs through the retention of upper and lower cases in the system.

#### More information

A number of additional software products can be used in conjunction with SIMOTION SCOUT. It must be ensured that the corresponding versions of these software products are compatible. Please consult the "Compatibility table of the software products in the SIMOTION environment".

Additional information is available in the Internet under:

<http://support.automation.siemens.com/WW/view/en/18857317>

#### Overview

Please observe the availability of the licenses for SIMOTION technology and communication functions for SINAMICS SM150 listed in the following.

#### **Unlicensed basic functions**

The rights of use for these software components are included when the basic unit is purchased:

- **SIMOTION Kernel runtime software**  
The SIMOTION Kernel is already installed on the unit.
- **Motion Control Basic technology functions**  
Use of technology functions for speed-controlled axes, single output cams and cam tracks, measuring inputs, and external encoders.
- **Technology functions for Drive Control Chart**  
By installing the optional SCOUT package Drive Control Chart, the technology functions of Drive Control Chart are made available to the SIMOTION runtime system.
- **Supplementary technology functions**  
Use of supplementary technology functions, such as adders, formula objects and fixed gears.
- **Function libraries for I/O interfacing**
- **Communication functions**  
This includes SIMATIC S7 communication functions on the SIMOTION side (programming device/OP communication to programming devices, for engineering and communication to TPs/OPs/MPs and PCs with SIMATIC HMI, e.g., ProTool/Pro, WinCC flexible or SIMATIC NET OPC), as well as UDP and TCP/IP communication

#### **SIMOTION IT communication functions subject to license**

SIMOTION IT enables additional communication functions via Industrial Ethernet (HTML through the Internet browser):

- Diagnostics functions via SIMOTION IT DIAG
- Communication via SIMOTION IT OPC XML DA
- SIMOTION IT Virtual Machine: Creation of Java applications for SIMOTION

#### **Licenses for SIMOTION IT**

One license is required for each SIMOTION device for the software options "SIMOTION IT DIAG", "SIMOTION IT OPC XML-DA" and the multiple license "SIMOTION IT".

#### **How can licenses be obtained for runtime software?**

Licenses for SIMOTION runtime software are ordered separately, independently of purchase of a SIMOTION controller or a SIMOTION memory card (CompactFlash card). The required software options are assigned to hardware (memory cards) by generating a license key over the Internet at:

[www.siemens.com/automation/license](http://www.siemens.com/automation/license)

# Motors for converter operation

## H-compact and H-compact PLUS

### Overview

The use of variable-speed motors enables savings to be achieved in many applications through higher system efficiencies compared to fixed-speed operation.

H-compact and H-compact PLUS motors have proven themselves many times over in variable-speed applications. For these motor series, special versions have been designed for operation with SINAMICS GM150 and SINAMICS SM150 medium-voltage converters.

These motor versions have, as standard, a reinforced stator winding insulation so that they can be fed from drive converters without requiring a sine-wave filter. Further, both bearings are electrically insulated and the shaft is equipped with a grounding system.

The motor insulation system corresponds to thermal class 155 (F) and they are generally utilized to thermal class 155 (F).

[Catalog D 84.1](#) contains detailed technical data for the following motors.

### Air-cooled H-compact 1LA4 motors

#### Technical specification overview

| <b>H-compact 1LA4</b>            |   |
|----------------------------------|---|
| <b>Rated voltage</b>             | 2.3 ... 6.6 kV  |
| <b>Rated frequency</b>           | 50/60 Hz  |
| <b>Motor type</b>                | Induction motor with squirrel-cage rotor  |
| <b>Type of construction</b>      | IM B3, IM V1  |
| <b>Degree of protection</b>      | IP55  |
| <b>Cooling method</b>            | IC411   |
| <b>Stator winding insulation</b> | Insulation system, thermal class 155 (F), utilized to 155 (F)                   |
| <b>Shaft height</b>              | 450 ... 630 mm  |
| <b>Bearings</b>                  | Roller bearings, sleeve bearings  |
| <b>Cage material</b>             | Die-cast aluminum or copper (dependent on the shaft height and number of poles) |
| <b>Standards</b>                 | IEC, EN   |
| <b>Frame design</b>              | Cast iron with cooling ribs   |

### Air-cooled H-compact 1PQ4 motors

#### Technical specification overview

| <b>H-compact 1PQ4</b>            |   |
|----------------------------------|---|
| <b>Rated voltage</b>             | 2.3 ... 6.6 kV  |
| <b>Rated frequency</b>           | 50/60 Hz  |
| <b>Motor type</b>                | Induction motor with squirrel-cage rotor  |
| <b>Type of construction</b>      | IM B3, IM V1  |
| <b>Degree of protection</b>      | IP55  |
| <b>Cooling method</b>            | IC416   |
| <b>Stator winding insulation</b> | Insulation system, thermal class 155 (F), utilized to 155 (F)                   |
| <b>Shaft height</b>              | 450 ... 630 mm  |
| <b>Bearings</b>                  | Roller bearings, sleeve bearings  |
| <b>Cage material</b>             | Die-cast aluminum or copper (dependent on the shaft height and number of poles) |
| <b>Standards</b>                 | IEC, EN   |
| <b>Frame design</b>              | Cast iron with cooling ribs   |

## Overview

**Air-cooled motors, H-compact PLUS 1RA4, 1RA6, 1RP6**

## Technical specification overview

| H-compact PLUS 1RA4, 1RA6, 1RP6  |   |
|----------------------------------|---|
| <b>Rated voltage</b>             | 2.3 ... 6.6 kV  |
| <b>Rated frequency</b>           | 50/60 Hz  |
| <b>Motor type</b>                | Induction motor with squirrel-cage rotor                      |
| <b>Type of construction</b>      | IM B3, IM V1  |
| <b>Degree of protection</b>      | IP23  |
| <b>Cooling method</b>            | IC01  |
| <b>Stator winding insulation</b> | Insulation system, thermal class 155 (F), utilized to 155 (F) |
| <b>Shaft height</b>              | 450 ... 630 mm  |
| <b>Bearings</b>                  | Roller bearings, sleeve bearings                              |
| <b>Cage material</b>             | Copper  |
| <b>Standards</b>                 | IEC, EN   |
| <b>Frame design</b>              |   |
| • Shaft height 450 ... 560 mm    | Frame: Cast iron<br>Cooling enclosure: Steel                  |
| • Shaft height 630 mm            | Frame: Steel<br>Cooling enclosure: Steel                      |

**Air-cooled H-compact PLUS 1RQ4 and 1RQ6 motors**

## Technical specification overview

| H-compact PLUS 1RQ4 and 1RQ6     |   |
|----------------------------------|---|
| <b>Rated voltage</b>             | 2.3 ... 6.6 kV  |
| <b>Rated frequency</b>           | 50/60 Hz  |
| <b>Motor type</b>                | Induction motor with squirrel-cage rotor                      |
| <b>Type of construction</b>      | IM B3, IM V1  |
| <b>Degree of protection</b>      | IP55  |
| <b>Cooling method</b>            | IC611/IC616   |
| <b>Stator winding insulation</b> | Insulation system, thermal class 155 (F), utilized to 155 (F) |
| <b>Shaft height</b>              | 450 ... 630 mm  |
| <b>Bearings</b>                  | Roller bearings, sleeve bearings                              |
| <b>Cage material</b>             | Copper  |
| <b>Standards</b>                 | IEC, EN   |
| <b>Frame design</b>              |   |
| • Shaft height 450 ... 560 mm    | Frame: Cast iron<br>Cooling enclosure: Steel                  |
| • Shaft height 630 mm            | Frame: Steel<br>Cooling enclosure: Steel                      |

# Motors for converter operation

## H-compact and H-compact PLUS

### Overview

#### Water-cooled H-compact 1LH4 motors

#### Technical specification overview

| H-compact 1LH4                   |   |
|----------------------------------|---|
| <b>Rated voltage</b>             | 2.3 ... 4.16 kV   |
| <b>Rated frequency</b>           | 50/60 Hz  |
| <b>Motor type</b>                | Induction motor with squirrel-cage rotor                      |
| <b>Type of construction</b>      | IM B3, IM B35 and IM V1                                       |
| <b>Degree of protection</b>      | IP55  |
| <b>Cooling method</b>            | IC71W   |
| <b>Stator winding insulation</b> | Insulation system, thermal class 155 (F), utilized to 155 (F) |
| <b>Shaft height</b>              | 500 mm  |
| <b>Bearings</b>                  | Roller bearings   |
| <b>Cage material</b>             | Copper  |
| <b>Standards</b>                 | IEC, EN   |
| <b>Frame design</b>              | Steel frame with water jacket                                 |

#### Water-cooled H-compact PLUS 1RN4 and 1RN6 motors

#### Technical specification overview

| H-compact PLUS 1RN4 and 1RN6     |  |
|----------------------------------|--|
| <b>Rated voltage</b>             | 2.3 ... 6.6 kV   |
| <b>Rated frequency</b>           | 50/60 Hz   |
| <b>Motor type</b>                | Induction motor with squirrel-cage rotor   |
| <b>Type of construction</b>      | IM B3, IM V1   |
| <b>Degree of protection</b>      | IP55   |
| <b>Cooling method</b>            | IC81W  |
| <b>Stator winding insulation</b> | Insulation system, thermal class 155 (F), utilized to 155 (F)  |
| <b>Shaft height</b>              | 450 ... 630 mm   |

# Engineering information

## SINAMICS GM150, SINAMICS SM150

### SIZER WEB ENGINEERING

#### Overview

##### Flexible, customized and user-friendly

With the web-based drive engineering tool you can quickly find the solution for your particular drive application: Menu-prompted workflows specifically guide you when you are selecting and dimensioning products and drive systems – including accessories.

Via an integrated query function, SIZER WEB ENGINEERING can also provide you with customized special solutions for applications that cannot be addressed using "Standard Products", i.e. where the focus is on flexibility and a customized solution

Currently the following product groups are supported:

- High-Voltage motors
- Low-Voltage motors
- Medium-Voltage converters
- Low-Voltage converters
- DC technology

Comprehensive documentation such as data sheets, starting calculations, dimension drawings, quotation documentation – to name just a few – are a fixed component of this tool.

The result: customized solutions for your drive tasks.

For example Starting calculation

System requirements include Internet access as well as a standard browser (e.g. Internet Explorer from V7.0, Firefox from V3.0).

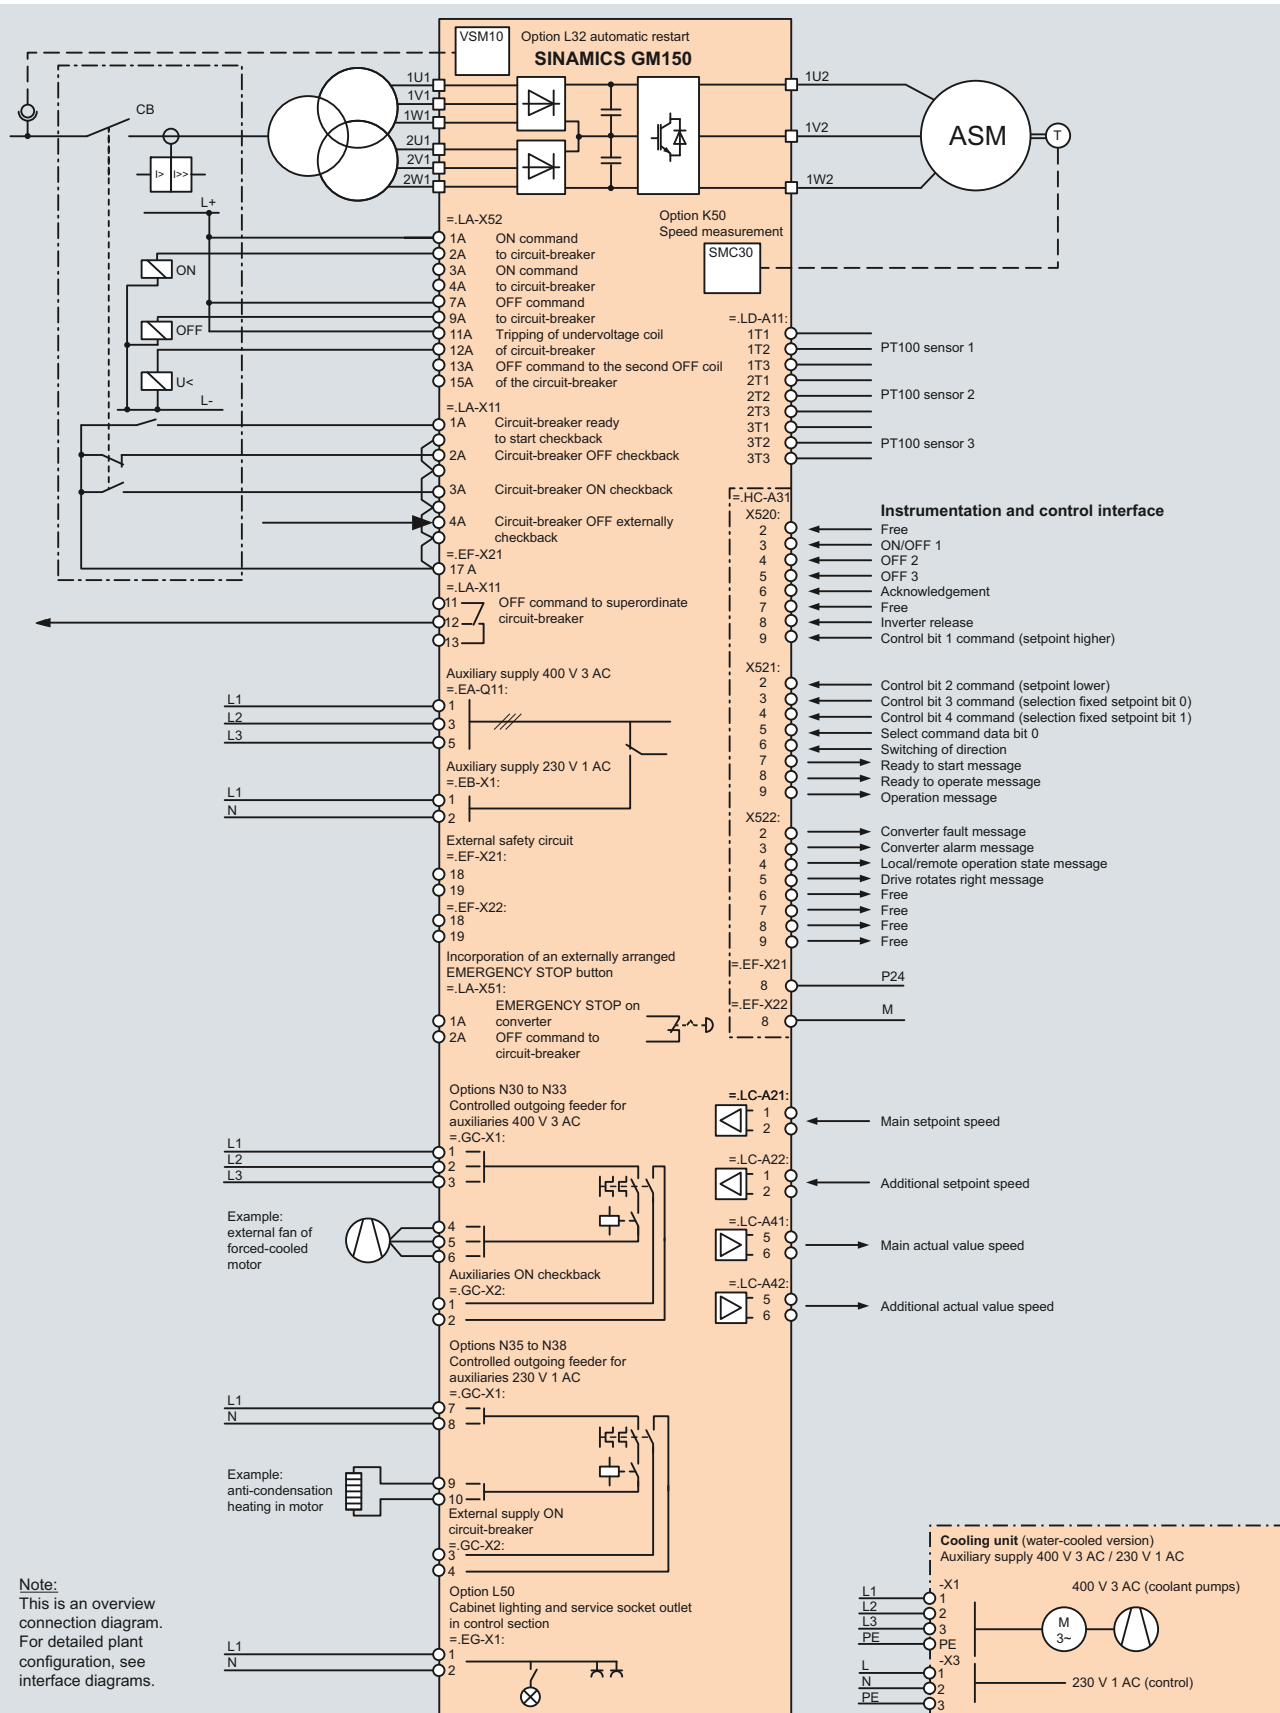

SIZER WEB ENGINEERING is available for use 24h/365 days after registration and release.

#### More information

Further information on the SIZER WEB ENGINEERING engineering tool is available at

### Overview of connections for SINAMICS GM150

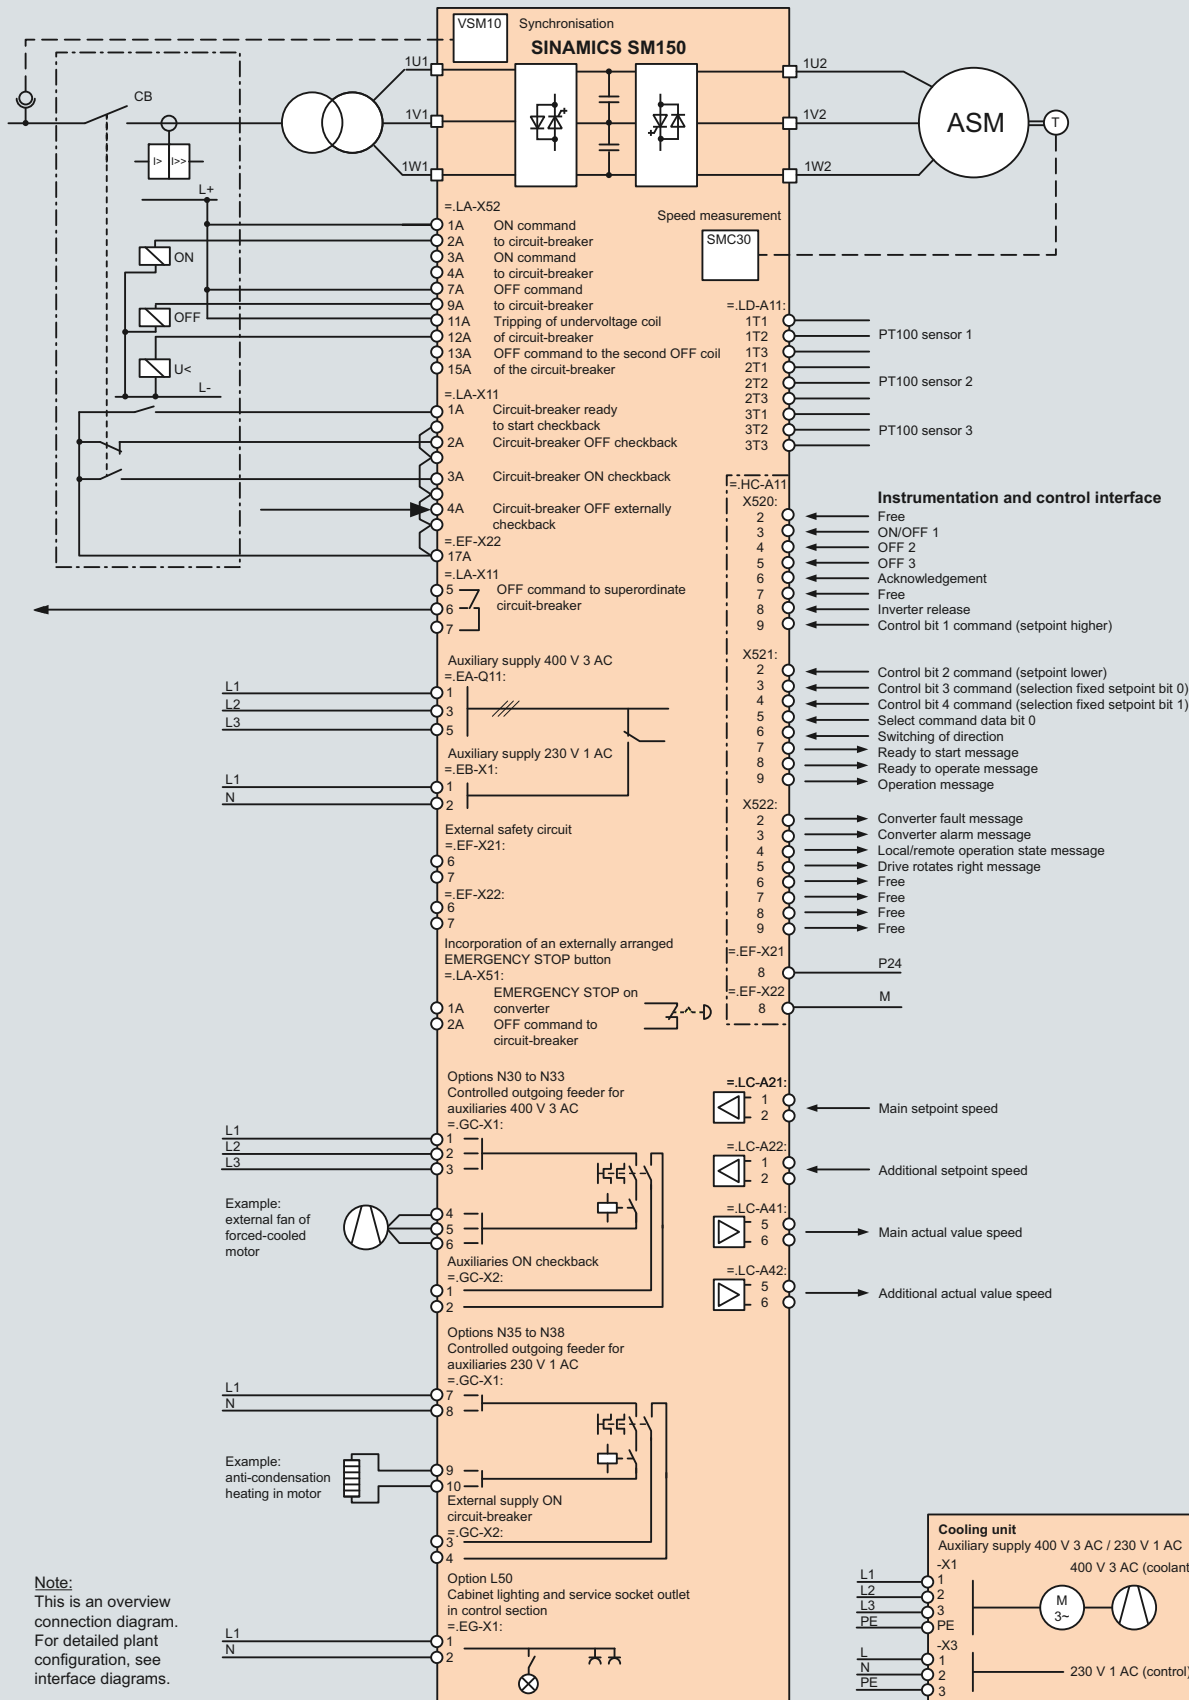

# Engineering information

## SINAMICS GM150, SINAMICS SM150

### Overview of interfaces

### Overview of connections for SINAMICS SM150

9

**Note:**  
This is an overview connection diagram. For detailed plant configuration, see interface diagrams.

G\_D012\_EN\_00035a

### Configuration

The interfaces of the TM31 and TM15 Terminal Modules are available for communication with the higher level. Additional terminal strips can be used to connect the circuit breaker or external protection and monitoring devices. The following tables give an overview of the type and preassignment of the interfaces in the standard version.

Note: For max. conductor cross-section and further technical data on TM31 and TM15 Terminal Modules, see [Description of options G61 and G63, Pages 6/16 and 6/20](#).

#### Terminal strip on TM31 (=HC-A51)

| Terminal     | Type    |  | Preassignment          | Comment |
|--------------|---------|--|------------------------|---------|
| <b>X540:</b> |         |  |                        |         |
| 1-8          | P24     | 24 V DC supply for inputs DI0 to DI7                               | –                      | –       |

| 8                | M              |  | The jumper must be removed according to the control mode (non-isolated/isolated). |

##### Terminal strip on isolation amplifier

| Terminal         | Preassignment                                  | Comment  |
|------------------|--|--|
| <b>=.LC-A21:</b> |  |  |
| 1                | Main speed setpoint (4 ... 20 mA)              | Signal level adjustable (0 ... 10 V; 0 ... 20 mA; 4 ... 20 mA) |
| 2                |  |  |
| <b>=.LC-A22:</b> |  |  |
| 1                | Supplementary speed setpoint (4 ... 20 mA)     | Signal level adjustable (0 ... 10 V; 0 ... 20 mA; 4 ... 20 mA) |
| 2                |  |  |
| <b>=.LC-A41:</b> |  |  |
| 1                | Main speed actual value (4 ... 20 mA)          | Signal level adjustable (0 ... 10 V; 0 ... 20 mA; 4 ... 20 mA) |
| 2                |  |  |
| <b>=.LC-A42:</b> |  |  |
| 1                | Supplementary speed actual value (4 ... 20 mA) | Signal level adjustable (0 ... 10 V; 0 ... 20 mA; 4 ... 20 mA) |
| 2                |  |  |

##### Temperature monitoring with Pt100 evaluation unit

| Terminal         | Type  | Comment  |
|------------------|-------|----------|
| <b>=.LD-A11:</b> |       |          |
| 1T1 to 1T3       | Pt100 | Sensor 1 |
| 2T1 to 2T3       | Pt100 | Sensor 2 |
| 3T1 to 3T3       | Pt100 | Sensor 3 |

The sensors can be connected to the Pt100 evaluation unit using either a two-wire or three-wire system. In the two-wire system, inputs xT1 and xT2 must be assigned and terminals xT2 and xT3 must be jumpered. The limit values for warning and shutdown must be set centrally for all three sensors.

The output relays are integrated into the internal fault and shutdown sequence of the converter. The signals can also be picked up in the plant side by means of two spare fault signaling relays.

##### Incorporating an external safety shutdown, SINAMICS GM150

# Engineering information

## SINAMICS GM150, SINAMICS SM150

### Cooling unit

#### Overview

The cooling unit is used to dissipate the power loss from the converter. It consists of an inner fresh water circuit and an outer raw water circuit.

#### Mode of operation

The heated fresh water in the inner circuit of the converter passes through two redundant, maintenance-free circulation pumps into the water/water plate heat exchanger which is made of high-grade steel and connected to the untreated water circuit on the installation side. The fresh water is cooled by the untreated water of the outer circuit and flows back into the converter.

The closed inner fresh water circuit is filled with deionized water and vented by means of a compensating tank. This tank is situated at the highest point of the cooling circuit.

#### Function

##### Raw water specifications

The raw water must be chemically neutral, clean and free of solids. Other quality requirements to be met by the raw water are listed in the following table.

| Raw water                         |                        |
|-----------------------------------|------------------------|
| Grain size of any entrained parts | < 0.5 mm               |
| pH value                          | 6.5 ... 8.0            |
| Carbonate hardness                | < 0.9 mMol/l (5 °dH)   |
| Total hardness                    | < 1.7 mMol/l (9.5 °dH) |
| Chlorides                         | 60 mg/l                |
| Sulfates                          | 80 mg/l                |
| Nitrates                          | 10 mg/l                |
| Iron (Fe)                         | 0.2 mg/l               |
| Ammoniac                          | 10 mg/l                |
| Dissolved substances              | < 3.4 mMol/l (340 ppm) |

In case of deviations it is recommended to carry out an analysis of the water in order to ensure the heat exchanger's endurance strength. In case of aggressive cooling water (including sea water), plate-type heat exchangers made of titanium should be used (options **W11** and **W12**).

##### Avoiding condensation

To avoid condensation at excessively low raw water temperatures, a three-way valve for controlling the water temperature is installed as standard.

##### Specifications for the cooling water in the fresh water circuit

Clean water (battery water) should be used to fill and top-up the deionized water circuit

| Deionized water  | In accordance with DIN EN 60993 (IEC 60993)   |
|--|---|
| Specific conductivity when filled in   | $\leq 30 \mu\text{S}/\text{cm}^1$   |
| Evaporation residue  | < 20 mg/l   |
| pH value   | 5 ... 9   |
| Content of <ul style="list-style-type: none"> <li>• metals from the hydrogen sulfide group (lead, antimony, tin, bismuth, arsenic, copper, cadmium)</li> <li>• metals from the ammonium sulfide group (iron, cobalt, nickel, chrome, manganese)</li> <li>• sulfur and nitrogen chloride compounds</li> </ul> | Not detectable  |
| Content of oxidizable, organic substances  | Max. a quantity equivalent to the usage of 30 mg/l potassium permanganate $\text{KMnO}_4$ |

##### Monitoring units in the fresh water circuit

To guarantee the self-protection of the converter, the deionized water is monitored by the converter:

- **Conductivity measurement:**  
The conductivity of the cooling water is constantly monitored in order to ensure that the leakage currents in the converter between different potentials and against ground remain small. An ion exchanger (in the cooling unit) holds the conductivity below the permitted maximum value of  $1.0 \mu\text{S}/\text{cm}$ . If the conductivity is too high, the ion exchanger filling must be changed. After the first year, an ion exchanger filling must be changed at least every two years as a rule.
- **Temperature monitoring**
- **Flow monitoring**
- **Leakage water monitoring**

Other monitoring operations and the control of the electrical equipment are performed in the cooling unit:

- A compensating tank for the compensation of changes in the volume of cooling water due to evaporation or temperature changes
- Indication of pressure in the converter inlet

The operating status is signaled to the converter.

##### Piping

The cooling unit consists of one transport unit and is supplied without deionized water.

For SINAMICS GM150 in the IGBT version and SINAMICS SM150 in the IGBT version, a pipe-connecting element between the cooling unit and converter is included in the scope of delivery. As standard, the water connections are located on the side.

For SINAMICS GM150 in the IGCT version and SINAMICS SM150 in the IGCT version, the piping between the cooling unit and the basic unit is realized below the units (refer to example shown in following diagram). The necessary pipes and connection pieces are included in the scope of delivery and are supplied loose. Rigid pipes are used (stainless steel). The converter is connected to the stainless steel pipe using a flexible hose. The height of the vertical pipes can be adjusted.

Special installation conditions have not been taken into account and, where applicable, a separate inquiry is necessary (e.g. where the cooling unit is not mounted directly next to the basic unit).

The piping for the raw water supply on the plant side is not included.

Piping for SINAMICS GM150 in the IGCT version and for SINAMICS SM150 in IGCT version

<sup>1)</sup> After the converter is filled and before the converter is switched on, the conductivity value is reduced to the permitted operating value of  $< 1.0 \mu\text{S}/\text{cm}$  by the ion exchanger which is integrated in the cooling unit.

### Function

#### Options

##### Redundancy (options **W02** and **W12**)

On request, the cooling unit can be designed for fully redundant operation, i.e. two plate-type heat exchangers are provided. In this case, defective parts can be exchanged while the system continues to run.

##### Tube-nest heat exchanger (on request)

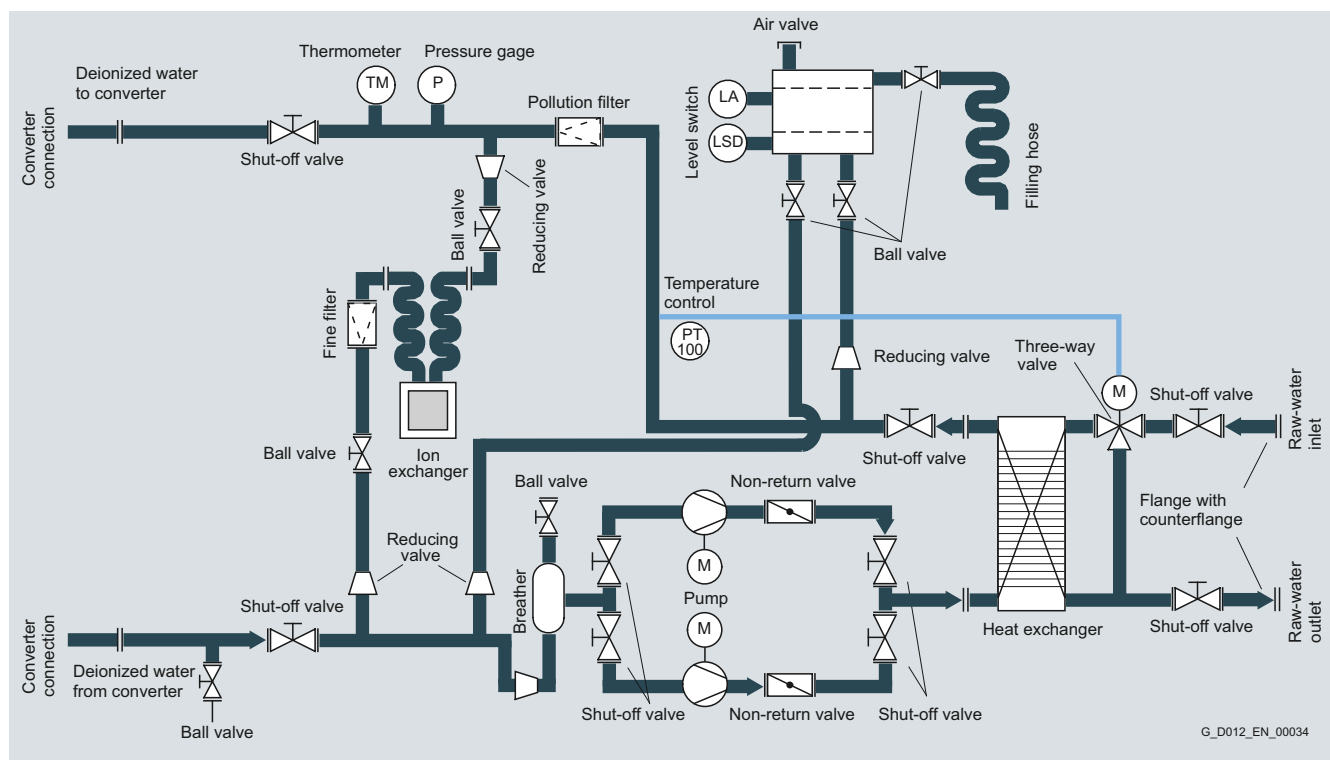

If the raw water quality deviates from the standard values specified above (e.g. the water contains suspended particles), on request, a tube-nest heat exchanger can be used.

Notice: A supplementary cabinet is required if a tube-nest heat exchanger is used.

The following additional options are available on request:

- External air-to-water heat exchanger (on request)  
An external air-to-water heat exchanger can be used on request if there is no process water available on the plant side. In this case, the ambient temperature may be a maximum of 35 °C.
- Chillers (on request)  
If there is no process water on the plant side and if the ambient temperature exceeds 35 °C, then on request, a so-called chiller (incl. compressor) can be used.
- Specification for the cooling unit (on request)  
When selecting option **W14** (converter without cooling unit), specifications of the cooling unit are available on request.

#### Flowchart of the cooling unit

### Technical specifications

#### Technical specifications of the cooling unit

##### Degree of protection

- Cabinet IP20
- All internal components IP54

**Supply voltage** 3/N/PE/AC 400 V ±10 %, 50/60 Hz ±3 %

##### Raw water circuit

- Inlet temperature 5 ... 35 °C (for power derating of the converter max. +40 °C)
- Temperature rise in converter, max. 10 K (for minimum flow)
- Input pressure 2 ... 10 bar

**Pressure drop** <1 bar

# Engineering information

## SINAMICS GM150, SINAMICS SM150

### Circuit breakers

#### Configuration

The circuit breaker placed on the primary side of the input transformer on the plant side belongs to the safety system of the converter. If a fault occurs inside the converter, the energy that is effective at the fault location must be limited. This is realized as a result of the inductance of the incoming transformer, which limits the rate-of-rise and magnitude of the current and the circuit breaker that trips as quickly as possible.

For the above conditions to be satisfied, the circuit breaker used must have the following characteristics:

- The total opening time of the circuit breaker – from the command to actually opening – must not be more than 80 ms. This means that the opening time, specified in the technical documentation of the circuit breaker manufacturer, must not be longer than 80 ms. The converter monitors the total opening time.
- The converter monitors the TRIP coils (shunt releases) for wire breakage and failure of the control voltage in the switchgear installation.
- The circuit breaker must be fitted with an undervoltage trip unit. The undervoltage trip unit (low-voltage coil) is controlled by way of the tripping chain in which the "undervoltage trip unit" of the converter must also be integrated. The auxiliary voltage from the switchgear (this is a reliable supply) is used as the supply.
- Additional delay times in controlling the circuit breaker must be avoided. All commands from the converter to the circuit breaker must act directly, without recourse to any coupling relays.
- A separate check-back signal must exist for each of the circuit breaker states ON and OFF. The checkbacks must not be delayed, i.e. no coupling relays may be used.
- An additional, independently operating overcurrent protection for the circuit breaker must be provided on the plant side (transformer and cable protection).
- Under no circumstances may the circuit breaker be electrically or mechanically closed externally. A mechanical interlock of the manual ON command on the circuit breaker prevents destruction of the converter by uncoordinated switch-on.

### Transformers

#### Configuration

The SINAMICS GM150 and SINAMICS SM150 converters are always connected to the medium-voltage network through a converter transformer.

By using the transformer the drive (converter and motor) are disconnected from the network and electrically isolated:

- The short-circuit power is limited to a maximum permissible value.
- Converter and motor are operated ground-free.
- The line harmonics and the voltage ripple are limited.

An insulation monitor, integrated in the converter, monitors the insulation state of the transformer secondary winding up to the motor.

#### Configurations for SINAMICS GM150

For the 12-pulse Basic Line Module of the SINAMICS GM150 converter, a three-winding transformer is required. The secondary windings of the three-winding transformer have a phase shift around 30°el, resulting in a 12-pulse infeed with accordingly lower line harmonic distortions.

For the 24-pulse Basic Line Module, two three-winding transformers are required. Two transformers with primary windings offset through 15° are used.

In this case, it must be ensured that the individual secondary windings have the same voltage, in order to reduce the line harmonics and to ensure a symmetrical current distribution. In this case, a maximum deviation of 1 % is permissible for the two secondary windings connected in parallel.

Instead of the two three-winding transformers a five-winding transformer can also be used in consultation with the transformer manufacturer.

#### Configurations for SINAMICS SM150

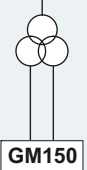

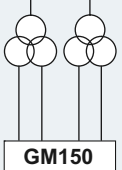

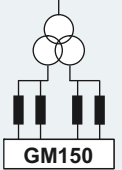

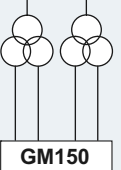

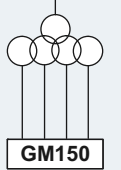

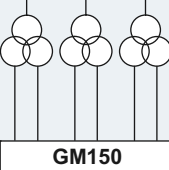

A two-winding transformer is required for each Active Line Module. When two or three complete converter units are operated in parallel, it is also possible to use a three-winding or a four-winding transformer with offset windings to suppress line harmonics.

## SINAMICS GM150, SINAMICS SM150

### Transformers

#### Configuration

##### SINAMICS SM150

Transformer secondary voltage (phase-to-phase, line to line):

- SINAMICS SM150 in the IGCT version: 3.3 kV
- SINAMICS SM150 in the IGBT version: 3.3 kV or 4.16 kV

If the converter is also to provide capacitive reactive power (a noticeable amount) to compensate for other inductive loads connected to the line supply, then the secondary no-load voltage of the transformer must be dimensioned lower, in order that the converter voltage of 3.3 kV or 4.16 kV is sufficient. As a consequence, the maximum power that can be transferred is reduced. For extremely high surge power levels, the secondary no-load voltage must also be dimensioned somewhat lower.

#### Transformer leakage reactances

The minimum required protection values for the leakage reactance of the various converter types can be found in the following table. These values include all the inductances between the line supply and converter Line short-circuit inductance, transformer inductance, reactor inductance.

| Converter             |                      | Transformer                                    |  |
|-----------------------|----------------------|--|--|
| Version               | Rated output voltage | Secondary voltage per winding system $V_{sec}$ | Minimum leakage reactance $X_{S,min}^{1)}$ |
|                       | kV                   | kV   | $\Omega$                                   |
| <b>SINAMICS GM150</b> |                      |  |  |
| IGBT                  | 2.3                  | 1.2  | 0.068                                      |
|                       | 3.3                  | 1.7  | 0.101                                      |
|                       | 4.16                 | 2.2  | 0.143                                      |
| IGCT                  | 3.3                  | 1.7  | 0.058                                      |
|                       |                      | 0.85 <sup>2)</sup>                             | 0.029 <sup>2)</sup>                        |
| <b>SINAMICS SM150</b> |                      |  |  |
| IGBT                  | 3.3                  | 3.3  | 0.314                                      |
| IGCT                  | 3.3                  | 3.3  | 0.179                                      |

Transformer minimum leakage reactances (short-circuit impedance of the line supply of 1 % taken into account)

#### Transformer short-circuit voltage

The required relative short-circuit voltage  $u_k$  (for each secondary winding) depends on – for the selected leakage reactance  $X_S$  (see table) – the rated apparent power of the transformer  $S_{NTrans}$  (for each secondary winding) and can be defined using the following formula:

$$u_k = X_S \times S_{NTrans} / (V_{sec})^2$$

$X_S$  in  $\Omega$

$S_{NTrans}$  in MVA

$V_{sec}$  in kV

#### Taps for adjusting the voltage

The winding taps are usually located on the high voltage side of the transformer.

##### SINAMICS GM150

Recommended taps for the voltage adjustments:  
 $2 \times \pm 2.5 \%$  or  $\pm 5 \%$  for operation with a sine-wave filter

##### SINAMICS SM150

Recommended taps for the voltage adjustment:  
 $2 \times \pm 2.5 \%$

<sup>1)</sup> The corresponding minimum leakage inductances  $L_{S,min}$  can be calculated using the following formula:  $X_{S,min} = 2\pi \times f_{Nline} \times L_{S,min}$  (with  $f_{Nline}$  = line frequency).

<sup>2)</sup> Option **N15**.

### Configuration

#### Basic information

The cable selection and cable dimensioning depend on various factors (e.g. temperature, routing type, cable type, EMC requirements, local regulations).

This is the reason that it should be noted that the following data represent recommendations only. The system integrator is responsible for dimensioning the cables.

#### Motor cables

If the SINAMICS GM150 and SINAMICS SM150 converters are operated without sine-wave filters, higher voltages arise on the motor terminals and hence on the cable due to the switching edges. Suitable cables must be selected, therefore, to meet the EMC and voltage endurance requirements. Different technical characteristics result in differences between the converters with IGBT power units and those with IGCT power units.

The correct cable cross-section depends not only on the motor current but also on the number of cables which are routed in parallel, the routing conditions and the ambient temperature. It must be determined for each individual case. Local installation regulations must be observed in addition.

A finely-stranded cable for equipotential bonding between the motor and converter should be installed parallel to the power cables. Local regulations must be observed in this case, too.

#### SINAMICS GM150 in the IGBT version and SINAMICS SM150 in the IGBT version (without sine-wave filter)

Shielded three-core medium-voltage cables must be used to connect the converter to the motor. For converters with an output voltage of 2.3 kV, cables for a minimum of 3.6/6 kV are adequate. For converters with output voltages of 3.3 kV and 4.16 kV, cables for a minimum of 6/10 kV are required. Symmetrical cables with individually shielded copper conductors are recommended. An additional common outer shield is an advantage for improving the EMC characteristics. The cable capacitances must not exceed the following values.

| Cable cross-section            | Cable capacitance |
|--------------------------------|-------------------|
| 3 × 240 mm <sup>2</sup>        | 0.6 μF/km         |
| 3 × 95 ... 185 mm <sup>2</sup> | 0.5 μF/km         |
| 3 × 70 mm <sup>2</sup>         | 0.4 μF/km         |

Single-core, shielded cables are permissible if three cables are routed in a triangular arrangement without clearance between the cables as cable bundle on the cable tray. The symmetrically arranged cable bundle comprises one cable for every phase (three-phase system). The cable bundles are arranged next to one another on the cable tray. The clearance between them corresponds to twice the outer diameter of a single-core cable. The cable bundles have alternating rotating fields – clockwise and counter-clockwise.

EMC-FC (Frequency Converter) cables should be used for increased requirements regarding EMC. Their EMC-optimized cable design reduces the radio interference radiation and radio interference voltage when compared to standard medium-voltage cables.

#### SINAMICS GM150 in the IGBT version and SINAMICS SM150 in the IGBT version (with sine-wave filter)

For operation with a sine-wave filter there are no special requirements to be met by the cables from the converter to the motor. When using unshielded medium-voltage cables, some type of cable armor is recommended in order to ensure the mechanical ruggedness of the cables. For a rated motor voltage of 3.3 kV and lower, the rated cable voltage is 3.6/6 kV. For a rated motor voltage above 3.3 kV, the rated cable voltage is 6/10 kV.

#### SINAMICS GM150 in IGCT version and SINAMICS SM150 in IGCT version

Shielded three-core medium-voltage cables for 6/10 kV must be used to connect the converter to the motor. Symmetrical cables with individually shielded copper conductors are recommended. An additional common outer shield is an advantage for improving the EMC characteristics.

Single-core, shielded cables are permissible if three cables are routed in a triangular arrangement without clearance between the cables as cable bundle on the cable tray. The symmetrically arranged cable bundle comprises one cable for every phase (three-phase system). The cable bundles are arranged next to one another on the cable tray. The clearance between them corresponds to twice the outer diameter of a single-core cable. The cable bundles have alternating rotating fields – clockwise and counter-clockwise.

EMC-FC (Frequency Converter) cables should be used for increased requirements regarding EMC. Their EMC-optimized cable design reduces the radio interference radiation and radio interference voltage when compared to standard medium-voltage cables.

#### **Cables between the transformer and the converter**

The same instructions apply as in the case of the motor cables.

# Engineering information

## SINAMICS GM150, SINAMICS SM150

### Power cables

#### Configuration

##### Permissible cable lengths

In the case of long cables between the converter and the motor, reflection phenomena lead to overvoltages and recharging currents on the cables and at the motor terminals and, in turn, to a higher level of stress on the motor insulation. The motor insulation is additionally subject to stress as a result of the voltage rates of rise (voltage gradients).

The increased stress on the cables and motor as a result of reflection phenomena in the case of long cables can be significantly reduced using a sine-wave filter at the converter output (option **Y15**).

The recharging currents in the cables and in the motor can be significantly reduced by using reactors at the converter output (option **L08**).

##### Maximum cable lengths without and with output reactor

| Converter  | Max. cable lengths   |               |  |               |
|--|--|---------------|--|---------------|
|  | Without output reactor (standard)  |               | With output reactor <sup>1)</sup> (option <b>L08</b> ) |               |

<sup>1)</sup> Distance between the converter and the motor depending on the current load for max. 6 three-wire EMC cables connected in parallel.

<sup>2)</sup> Armored cables recommended.

### Configuration

#### General notes on operating high-voltage motors

High-voltage motors can generate a voltage if they are driven by the load as a result of the inherent plant or system principle. The magnitude of this voltage essentially depends on the speed and the type of excitation of the high-voltage motor. The following must be noted in order to ensure that the converter power unit safely and reliably operates while the high-voltage motor is rotating:

- For permanent-magnet synchronous motors, options **L49** (make-proof grounding switch at the converter output) and **L52** (circuit breaker at the converter output) must be selected.
- For induction motors and separately-excited synchronous motors, if the motor is driven by the load, then options **L49** and **L51/L52** (depending on the particular application) should be selected.

#### Operation of Siemens high-voltage motors

A sine-wave filter is not required between the Siemens high-voltage motors H-compact, H-compact PLUS, H-modyn and special motors for e.g. marine, rolling mill and high-speed applications and the SINAMICS GM150 and SINAMICS SM150 converters. Reliable operation of the drive is assured by the following measures:

- The MICALASTIC VPI insulation system is optimally suited for the voltage stressing which occurs in converter operation.
- The protection concept for high voltage motors when fed from converters involves two insulating bearings to avoid damaging bearing currents. Further, shaft grounding is absolutely necessary so that no voltage can be established at the motor shaft with respect to ground. The shaft is either grounded using a rotary pulse encoder with integrated grounding track on the non-drive end or using a separate grounding brush on the motor shaft. In the first case, an insulated coupling must be used. This is because as a result of the shaft grounding at the non-drive end, circulating currents can flow through the driven load. In the second case, the rotary pulse encoder must be mounted at the non-drive end so that it is insulated; an insulated coupling is not required (see alongside figures).

Minimum motor rated frequency:

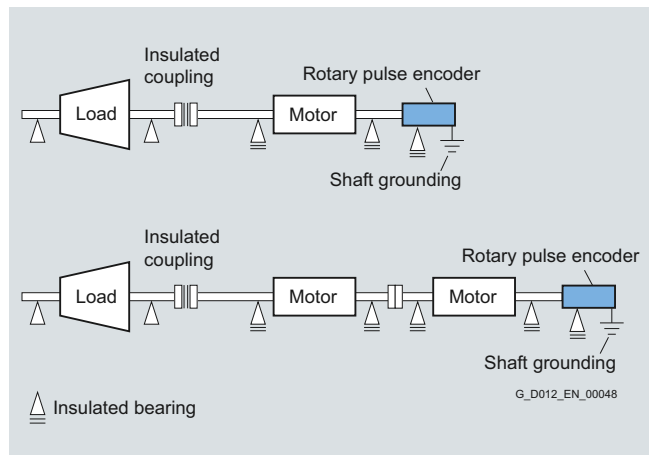

- SINAMICS GM150 in IGBT version and SINAMICS SM150 in IGBT version: 20 Hz
- SINAMICS GM150 in IGCT version and SINAMICS SM150 in IGCT version:
  - 8.5 Hz for an output voltage of 3.3 kV
  - 5.0 Hz for a reduced voltage of 3.15 kV

#### Note:

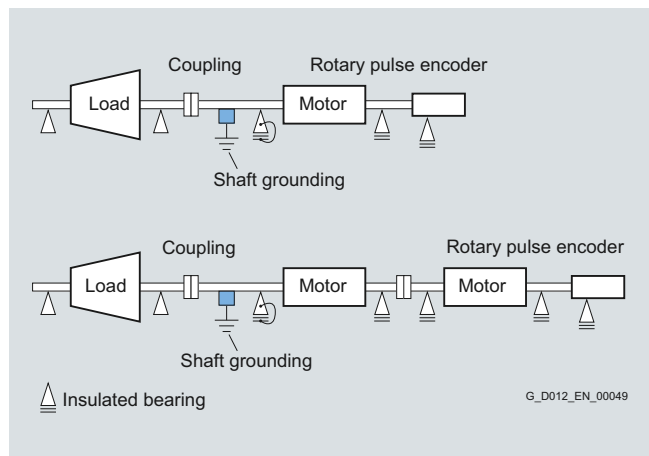

Please contact your regional Siemens sales partner in the case of different data.

#### Note:

For motors with rated frequency of less than 8.5 Hz, a reduced voltage of 3.15 kV should always be selected.

Shaft grounding at the non-drive end

Shaft grounding at the drive end

# Engineering information

## SINAMICS GM150, SINAMICS SM150

### Motors

#### Configuration

##### Operation of motors with several winding systems

To increase the output power of the converters it is possible to operate several power units in parallel. In this way, a maximum power rating of up to 13 MVA with an output voltage of 4.16 kV can be achieved by connecting two SINAMICS GM150 in the IGBT version converters in parallel. Using the same principle, a maximum power rating of 21 MVA or 31.5 MVA is achieved by connecting three SINAMICS GM150, in the IGCT version and SINAMICS SM150 converters in parallel.

To ensure a uniform division of current between the two sub-systems, two or three electrically isolated but mutually non-displaced winding systems are required in the motor.

##### Operation of two-pole motors

High-speed converter drives with 2-pole motors require special measures regarding their mechanical design (limiting and critical speed, bearings, rotor design, foundation design). An inquiry is required for such applications.

In the case of retrofit applications it is necessary to ensure that the motors have no mechanical natural resonance in the provided setting range. Affected speed ranges can be suppressed by the converter if necessary.

##### Operation of explosion-protected motors

Motors from Siemens are also available in versions for use in areas subject to explosion hazard. Types of protection available for the motors are:

- Pressurized enclosure: Ex pe IIC T3  
acc. to EN 60079-2/VDE 0170/0171 T301 (IEC 60079-2)
- Non-sparking: Ex n AIIIC T3  
acc. to EN 60079-15/VDE 0170/0171 T16 (IEC 60079-15)

Apart from the measures required – also for fixed-speed motors – to increase the type of protection, for variable speed motors it is also necessary to have a shaft grounding device with type of protection type Ex d IIC T6 (without rotary pulse encoder) or Ex de IIC T6 (with rotary pulse encoder).

An inquiry is always necessary for motors with increased safety Ex e.

##### Ex certification

For motors with Ex n type of protection and converter operation it may be necessary to accept the complete system on a case-for-case basis in order to issue an Ex certificate. An inquiry is required for such cases.

An acceptance test of the complete drive system is not required for motors with Ex pe type of protection and converter operation.

##### Drives for a square-law load torque

Driven loads with a square-law load torque ( $M \sim n^2$ ) such as pumps and fans, require the full torque at rated speed. Increased starting torques or load surges do not usually occur. It is therefore unnecessary to provide an overload capability for the converter.

The following applies when selecting a suitable converter for driven loads with a square-law load torque: The rated current of the converter must be at least as large as the motor current at full torque in the required load point.

##### Drives for a constant load torque

Self-ventilated motors cannot provide their full rated torque in continuous operation over the complete speed range. The continuous permissible torque decreases as the speed decreases because of the reduced cooling effect. Depending on the speed range, the torque – and thus the power – must be reduced accordingly for self-cooled motors.

For frequencies above the rated frequency  $f_N$ , force-ventilated motors are operated in the field-weakening mode. In this case, the torque that can be utilized decreases with approx.  $f_N/f$ . The power remains constant. A sufficient interval of  $\geq 30\%$  from the breakdown torque must be observed, which is reduced by  $(f_N/f)^2$ .

##### Drives with overload requirements

The rated data of the converters specified in the Technical data provide no reserves for overload capability. The current rating of the converter must always be reduced if the specifications call for an increased overload capability of the converter. The required power reduction differs according to the application, operating mode and converter type. The derating can be determined on request if all of the boundary conditions are specified.

##### Operating standard line motors (only SINAMICS GM150 in the IGBT version)

In conjunction with the optional sine-wave filter (option **Y15**) the SINAMICS GM150 as IGBT version is ideal for the operation of line motors in applications with a quadratic load torque (e.g. pumps and fans). The near sinusoidal output voltages and currents rule out all loading of the insulating system and bearings. The sine-wave filters supply the motors with almost sinusoidal motor currents and voltages so that line motors can be operated. The sine-wave filter operates optimally for motors with a rated frequency of 50 Hz or 60 Hz. It should be noted that only driven loads with a square-law load torque may be operated (e.g. pumps, fans). The output frequencies used in operation can lie in the range between 30 Hz and 66 Hz.

A field weakening range of 1:1.1 is permissible (max. 55 Hz for 50 Hz motors and max. 66 Hz for 60 Hz motors).

The voltage harmonic distortion at an output frequency of 50 Hz is less than 5 % when using a sine-wave filter.

In order to optimally adapt the sine-wave filter to the motor, the rated motor current, the motor current at the rated point and the motor no-load current must be specified when ordering.

### Configuration

The standard scope of delivery of the SINAMICS GM150 and SINAMICS SM150 comprises:

#### 1. Basic unit

The basic unit consists of the converter power unit including closed-loop control, in either an air-cooled or water-cooled version. One or more transport units are supplied depending on the converter type. Exact details are to be found in the dimension drawing for the specific order.

SINAMICS SM150 includes a VSM10 Voltage Sensing Module in the basic unit. The VSM10 detects the line supply voltage regarding phase position, frequency and amplitude. A voltage transformer, which should be provided on the primary side of the circuit breaker (plant-side) is used for this purpose.

#### 2. Cooling unit for water-cooled converters

The cooling unit consists of one transport unit and is supplied without deionized water.

For SINAMICS GM150 in the IGBT version, a pipe-connecting element between the cooling unit and converter is included in the scope of delivery.

For SINAMICS GM150 in the IGCT version and SINAMICS SM150 in the IGCT version, the piping between the cooling unit and the basic unit is routed below the units. The necessary pipes and connection pieces are included in the scope of delivery and are supplied loose.

Special installation conditions have not been taken into account and, where applicable, a separate inquiry is necessary (e.g. where the cooling unit is not mounted directly next to the basic unit).

The piping for the raw water supply on the plant side is not included.

#### 3. Optional components

Optional components, e.g. sine-wave filters or output reactors, are delivered as separate transport units. If necessary, cables for connecting the optional components to the power unit are delivered as well. For the DC bus configurations of SINAMICS SM150, the cabling between the basic unit and the option cabinets is routed below the units. The cables required are not included in the scope of delivery as they have to be selected according to the particular project.

#### 4. Static excitation unit

A static excitation unit is generally included in the scope of delivery for converters to supply synchronous motors. This must be ordered with a separate order number (see [Accessories, Chapter 7](#)).

#### The following items are not included in the standard scope of delivery:

- Cables between the transformer and the converter
- Motor cables
- Circuit breakers
- Transformer
- Motor
- Cable ducts
- Filter systems
- Piping for the raw water circuit of the cooling unit
- Voltage transformer for the synchronizing voltage of the VSM10
- Basic configuration for SINAMICS SM150

#### Basic configuration for SINAMICS SM150

For the SINAMICS SM150 converter system, it is absolutely necessary that the software is configured for the specific plant or system.

This involves:

- connection of the static excitation unit via PROFIBUS
- operation of the SIMATIC OP 177B operator panel
- signal marshaling to connect to the basic automation (e.g. ON/OFF or fault signals from Motor Modules)

Without this basic configuration, the SINAMICS SM150 converter system cannot function. The basic configuration should either be undertaken by a system integrator or option **S05** should be ordered.

Beyond this, in individual cases, application-specific engineering is required, which is not emulated in the product, but can be implemented in coordination with the system integrator.

This includes:

- power pre-control of several Motor Modules on a common infeed
- power monitoring
- control of auxiliaries with temperature/flow/bearings
- communication configuration to the PDA (Process Data Acquisition) via PROFINET
- integration of additional options

## SINAMICS GM150, SINAMICS SM150

### Training

#### Overview

**Faster and more applicable know-how:  
Hands-on training from the manufacturer**

**SITRAIN** – Siemens Training for Industry – provides you with comprehensive support in solving your tasks.

The comprehensive range of training courses encompasses the product, system and solution range of Siemens Industry Sector.

#### Benefits

##### **Achieve more with SITRAIN**

Experience the advantages with SITRAIN:

- Shorter times for commissioning, maintenance and servicing
- Optimized production operations
- Reliable configuration and commissioning
- Minimization of plant downtimes
- Flexible plant adaptation to market requirements
- Compliance with quality standards in production
- Increased employee satisfaction and motivation
- Shorter familiarization times following changes in technology and staff

#### Application

##### **SITRAIN highlights**

###### Wide variety

With a total of about 300 local attendance courses, we train the complete range of products from Siemens Industry as well as interaction of the products in systems.

###### Practical experience

We place the highest emphasis on practical exercises, which make up to half of the course time. You can therefore immediately implement your new knowledge in practice.

###### Top trainers

Our trainers have a wealth of practical and didactic experience. Even complicated topics are taught so that they are easily understood.

###### Tailor-made training

On request, we perfectly harmonize the training course to individual requirements; to specifically address your demands and tailored to your team.

###### Blended learning

With blended learning, the combination of various learning media and sequences, for example, attending a course in a local training center can be optimally supplemented by a teach-yourself program as preparation or follow-up. Reduced traveling costs and periods of absence through training sequences independent of location and time.

###### Available worldwide.

You can find us at more than 50 locations in Germany, and in over 60 countries worldwide. Training can be carried out in our Training Centers or at your company.

### Design

#### Range of training courses for SINAMICS GM150/SM150

Here you will find an overview of the training courses available for SINAMICS GM150 and SINAMICS SM150.

The courses are modular in design and are intended for a variety of target groups as well as individual customer requirements.

The system overview will acquaint decision-makers and sales personnel with the system very quickly.

The configuration course provides all the information you need to configure the drive system.

The basic and follow-up courses are guaranteed to provide all of the technical knowledge service engineers will need for servicing/commissioning motion control applications, communication and cabinet units.

All modules contain as many practical exercises as possible, in order to facilitate intensive and direct training on the drive system and with the tools in small groups.

More information on course contents, dates and prices is available on the Internet at:

[www.siemens.com/sitrain](http://www.siemens.com/sitrain)

### Description

#### **SINAMICS GM150/SM150 engineering (3 days)** **DR-GMPH-PJ**

##### Description/learning objective

The course addresses design engineers, application engineers and sales personnel who are involved in the application engineering for SINAMICS GM150 or SINAMICS SM150. Training covers the fundamental physical relationships for the design of a drive system. Using the self-explanatory SIZER for Siemens Drives engineering tool, different SINAMICS applications are calculated and consolidated using exercises on PCs. Control functions are explained, and their boundary conditions described. The various options for SINAMICS are also presented to permit derivation of their application.

##### Target group

Project managers, members of project teams, programmers

##### Requirements

Knowledge of drive and control technology

##### Content

- SINAMICS system overview
- Physical fundamentals for drive calculation
- Engineering SINAMICS GM150 and SINAMICS SM150 cabinet components together with background information: Line supplies, EMC, EMERGENCY-STOP, interfaces
- SIZER for Siemens Drives engineering tool with exercises for various applications
- Technical documentation: catalogs, engineering information, operating instructions
- Open-loop and closed-loop control functions
- Simple startup using the AOP30 operator panel
- Transformer/reactor
- Cooling unit
- High-voltage motor
- Medium-voltage cable

# Services and documentation

## SINAMICS GM150, SINAMICS SM150

### Training

#### Description

##### **SINAMICS GM150 commissioning and service (5 days) DR-GM150**

###### Description/learning objective

This training course provides you with the basics to understand the commissioning steps for the SINAMICS GM150 drive system. You know the closed-loop control structures and communication interfaces. You can diagnose the drive state and analyze fault messages. To do this, you use the AOP30 operator panel and the STARTER commissioning tool.

###### Target group

Commissioning engineers, application engineers, service engineers, maintenance technicians

###### Requirements

Basic knowledge of electrical engineering

###### Content

- Design and function of the SINAMICS GM150 converter components
- Power unit topology: Precharging, rectifier and inverter, actual value sensing
- Identifying the hardware and circuit diagrams
- Drive CLiQ topology, objects and components
- Parameterization, diagnostics and data backup using the AOP30 operator panel and STARTER commissioning tool
- Principle of operation and analysis of the setpoint channel and the closed-loop control
- Analysis of alarm and fault messages
- Configuration and analysis of PROFIBUS communication between SINAMICS GM150 and SIMATIC S7
- Detailed practical exercises for basic commissioning, engineering and analysis of the drive functions using the AOP30 operator panel and STARTER commissioning tool
- Detailed practical exercises to commission the Motor Module:
  - Execution of test and identification routines
  - Operation of the drive
  - Optimization and checking the current and speed controller

##### **SINAMICS SM150 commissioning and service (8 days) DR-SM150**

###### Description/learning objective

This training course provide you with the basics to understand the commissioning steps for the SINAMICS SM150 drive system. You know the closed-loop control structures and communication interfaces. You can diagnose the drive state and analyze fault messages. To do this, you use the SIMOTION SCOUT software package and the STARTER commissioning tool.

###### Target group

Commissioning engineers, application engineers, service engineers, maintenance technicians

###### Requirements

Basic knowledge of electrical engineering

###### Content

- Design and function of the SINAMICS SM150: D445 and CX32 control modules, Power Stack Adapter PSA, line-side and motor-side inverters, DC link, interfaces, circuit diagrams
- Layout and arrangement of the complete drive system: Circuit breaker, transformer, reactor, motor, cooling unit
- Parameterization, diagnostics and data backup using the SIMOTION SCOUT software package with integrated STARTER commissioning tool
- Procedure when commissioning
- Closed-loop control: Setpoint channel, vector control, function diagrams, interface to higher-level technology in SIMOTION
- Communication via PROFIBUS integrated to SIMOTION
- Alarms and fault messages
- Information on replacing components: IGCT phase module, AVT Combi, pre-charging
- Practical exercises using the SIMOTION SCOUT software package with integrated STARTER commissioning tool on training equipment

#### Application

This training case is used for training and marketing SINAMICS cabinet units.

When used as a stand-alone unit, it can be used to demonstrate commissioning and usability offline. Online operation is implemented by connecting to a SINAMICS cabinet unit or the SINAMICS S120 training case.

#### Design

- Cabinet operator panel with line connection
- Internal 24 V DC power supply
- Can be set upright for demonstration purposes
- Offline functions
- Online functions with SINAMICS CU320 Control Unit via RS232 PPI

#### Technical specifications

##### AOP30 cabinet operator panel training case

|   |      |

# Services and documentation

## SINAMICS GM150, SINAMICS SM150

### Documentation

#### Overview

The documentation is supplied with the converter in PDF format on a CD-ROM as standard.

It consists of the following sections:

- Operating Instructions
- List Manual (parameter lists and function diagrams)
- Equipment-specific documents such as circuit diagrams, dimension drawings, layout diagrams and terminal diagrams
- Additional operating instructions (comprehensive component descriptions)

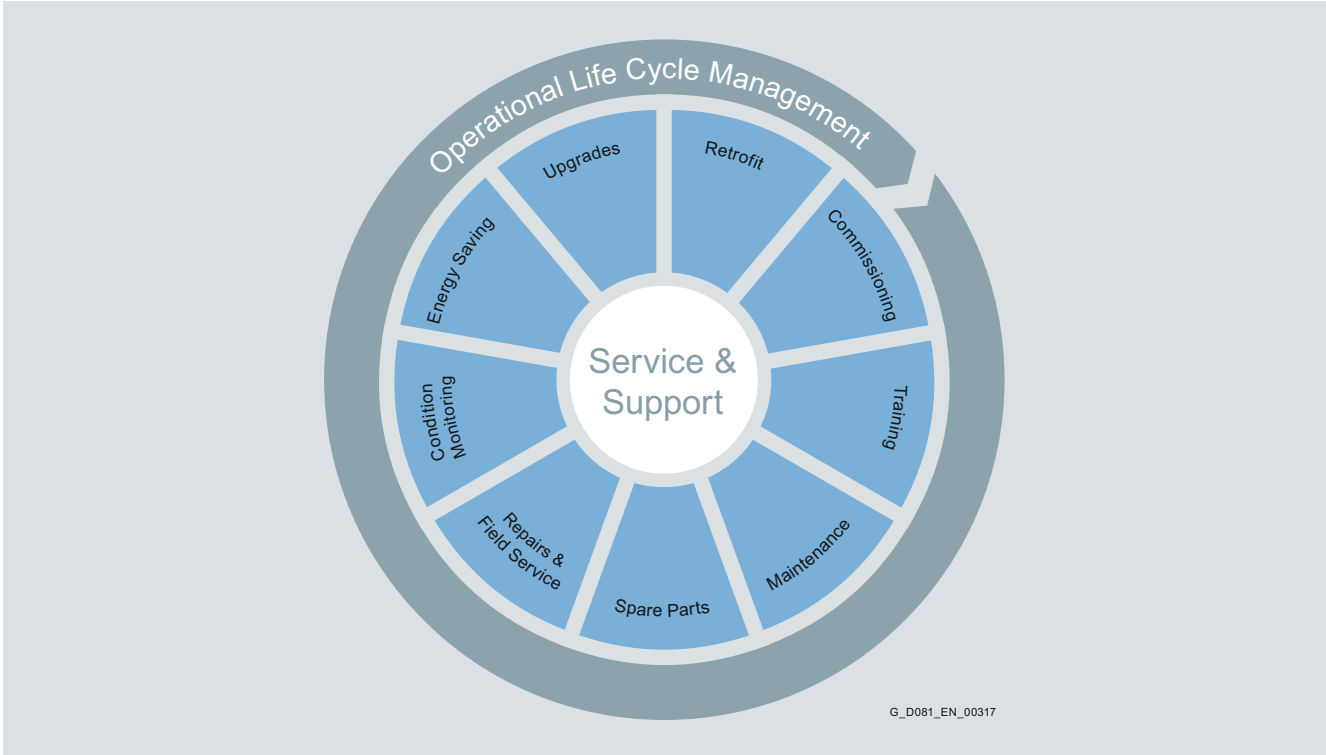

The documentation is in English. Additional languages can be optionally ordered ([see Description of options, Page 6/11](#)).

#### Notice:

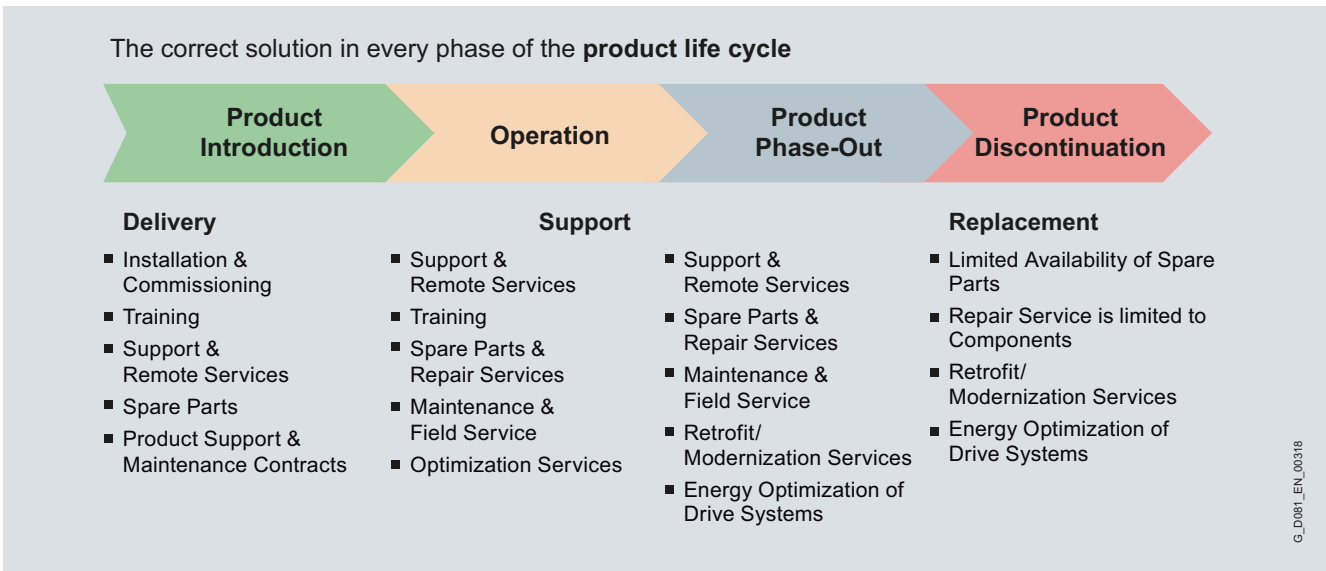

Due to US embargo restrictions, the documentation cannot be supplied on CD-ROM to countries such as Iran, Syria, Cuba, Sudan or Libya, as Adobe Acrobat Reader is not permitted in these countries for reading PDF documents. The documentation must be ordered in paper form when exporting converters to these countries (option **D15**).

## Overview

Our service and support is available to you worldwide and supports you over the complete lifecycle of your machines and plants in all areas of Siemens drive technology – locally in over 100 countries and around the clock.

You will find our regional contact partner as well as further information under:  
[www.siemens.com/automation/partner](http://www.siemens.com/automation/partner)  
[www.siemens.com/id-service](http://www.siemens.com/id-service)

# Services and documentation

## SINAMICS GM150, SINAMICS SM150

Perfectly setup for global service  
over the complete lifecycle

### Commissioning drive systems

#### Our services

In addition to commissioning plants and systems, we also provide the associated local service for motors, converters and auxiliary equipment for variable-speed drives in medium-voltage applications up to 60 MW.

We focus on the following sectors and segments:

- Oil and gas
- Chemical industry
- Energy
- Steel
- Paper
- Marine engineering
- Mining
- Cement
- Water and wastewater
- Wind turbines
- Auxiliaries
  - Water cooling systems
  - Oil cooling systems
  - Higher-level control systems
  - Protective equipment
  - Static excitation units/excitation converters
  - Transformer protection

#### Your advantages at a glance

- High degree of flexibility and cost advantages thanks to a global network of qualified service personnel
- Direct contact between customers and manufacturer, in close collaboration with local service centers
- Short communication paths across all organizational levels
- "Global resource management" for global service calls taking into account legal stipulations and tax regulations
- Cross-area drive know-how for the entire system
- Highly qualified specialists for variable-speed drives

For ordering information on our extensive range of services see [Page 9/12](#).

### Customized training courses for drives

#### Our services

We offer a wide range of individual training courses to expand existing know-how or to provide basic information on specific topics. These training courses can be designed as follows:

- local training courses at the customer's site in the form of a workshop, or
- training in the Siemens factory

The duration of the training course is adapted to the particular training-specific requirements and necessities. It goes without saying that we can support you in implementing individual training requirements and planning.

#### Your advantages at a glance

- Providing the customer's own maintenance and operating personnel with technical information
- Maintaining and correctly implementing drive-specific maintenance work to reduce internal costs and time
- Fast and competent recording and determination of fault causes (real-time troubleshooting)
- In case of a fault situation, the customer's own maintenance personnel are in a position to quickly and reliably make the correct decisions
- Targeted contact with the Siemens service organization with a competent description of the fault
- Providing information and know-how to correctly select and stock a range of important spare parts to ensure quick replacement and resumption of operation in the case of a plant failure

For ordering information on our extensive range of services see [Page 9/12](#).

# Services and documentation

## SINAMICS GM150, SINAMICS SM150

Perfectly setup for global service  
over the complete lifecycle

### Maintenance and inspection of drives

#### Our services

In addition to regular inspections, we also provide the option of entering into specific maintenance contracts. These can be individually tailored to your requirements and specifically expanded by the options that you require.

- Inspection
  - Determining and documenting the actual condition of electric motors and converters
  - Comprehensive plant or system assessment based on checklists that have been specifically developed for this purpose
  - Definition of additional measures required, including reporting
- Maintenance contracts
  - Definition of the required maintenance intervals
  - Remote support and availability of a technical contact person
  - Agreed fixed inspection dates
  - Spare parts, service materials and tools
  - Training the service and plant operating personnel of the customer

#### Your advantages at a glance

- Inspection
  - Assessment of the actual situation, measurements and diagnostics corresponding to the checklist
  - Determination of the required maintenance work
  - Recommendation for an optimum range of spare parts to be stocked
  - Investigation of the possibilities for improving the operating conditions
- Maintenance
  - Maximizing the drive lifetime
  - Minimizing component wear
  - Avoiding non-scheduled production failures and the associated costs
  - Monitoring the product lifecycle and providing support on alternatives

For ordering information on our extensive range of services see [Page 9/12](#).

### Spare parts for drives

#### Our services

##### Spare parts/spare part packages on site:

For drives – especially in the medium-voltage range – which generally play an essential role as main drives, in addition to the general service requirements, the availability of spare parts is of crucial significance. In addition to ordering individual spare parts, this is the reason that we now also offer the option of requesting complete packages of spare parts. The essential basis for creating these packages is our extensive experience that we have gained over decades regarding maintenance activities in the drive and component area.

##### Various spare part packages are available for low and medium-voltage units:

- Basic spare part package  
Spare part package with the most important electronic components, for example for commissioning
- Advanced spare part package  
A spare part package that has been expanded to include additional electronic and power unit components in order to secure spare parts for the first operating years
- Premium spare part package  
Comprehensive spare part package, which includes spare parts to extend the period of usage  
The stock of spare parts can be checked every year as part of annual maintenance and can be individually adapted.

#### Your advantages at a glance

- Minimization of fault-related downtimes
- In the case of a fault, no additional waiting times for spare parts to be delivered
- Increased availability of the drive unit
- Cost advantages by compiling spare part packages
- Individual package content corresponding to the customer and plant requirements over the complete lifecycle

By specifying the device-specific Siemens order number as well as the associated serial number, you can view our "SparesOnWeb" database to obtain spare parts information for almost all of our current drive products. The recommended spare part packages are displayed here with the corresponding content and ordering data.

[www.siemens.com/sow](http://www.siemens.com/sow)

# Services and documentation

## SINAMICS GM150, SINAMICS SM150

Perfectly setup for global service  
over the complete lifecycle

### Remote maintenance – expert knowledge close at hand

#### Our services

Complex drive systems must have a high availability and when required demand competent and fast support. Specialist personnel cannot always be available locally. This is the reason that we offer you the option of remotely monitoring your plants or systems. Such remote maintenance can, for instance, include the following services:

- Online condition monitoring
- Data is stored so that it cannot be lost in the event of a power failure
- Trend analysis, archiving and comparison of the saved data
- When required, expert support from the local service organization
- Video-based support for plant personnel
- Definition of additional measures required, including a report

#### Your advantages at a glance

- Leading edge technology for highly secure connections with the maximum availability
- High number of supported software applications
- Support service around-the-clock
- Transparency through monitoring and signaling all connections
- Minimizing non-scheduled plant downtimes and avoiding possible subsequent costs
- Increased plant availability
- Basis for condition-oriented maintenance
- Optimization and planning of service and maintenance work
- Careful use of valuable resources by reducing plant visits
- Optimization of the spare part inventory
- Graded, flexible hardware and software concepts can be adapted in a scaled fashion to the appropriate drive system

For ordering information on our extensive range of services see [Page 9/12](#).

### Saving energy in drive technology

#### Our services

Drive technology represents about 2/3 of the industrial energy consumed. As a consequence, the efficient use of energy in the drives field plays a significant role and today represents high cost-saving potential. To optimize the energy usage, we have defined essential measures, which when requested, we can apply in your facility:

- Identification of energy-saving potential  
Determine the actual energy demand and subsequent calculation of the possible energy-saving potential
- Evaluation of the data determined  
By applying various methods, the identified energy-saving potential is evaluated, therefore providing a sound basis for making a decision
- Implementation of measures to optimize energy usage  
Selection of the appropriate products as well as performing specific implementation measures

#### Your advantages at a glance

- Efficient use of energy by using state-of-the-art, energy-saving drive technology
- Efficient use of energy by changing over to variable-speed drives
- Reduction of the line-side reactive power demand
- Improvement in the starting behavior of motors
- Reduced line harmonics
- Noise reduction by applying state-of-the-art technology
- Optimization of production conditions
- Reduction of wear by adapting the speed

# Services and documentation

## SINAMICS GM150, SINAMICS SM150

Perfectly setup for global service  
over the complete lifecycle

### Retrofitting drives

#### Our services

Retrofitting drives is one of the most important elements in the product lifecycle. You can only ensure that your production runs smoothly if your machines, converters and plants operate safely and reliably.

To support you here, we can replace old technology by state-of-the-art converters and motors from our current product portfolio. Generally, it is not necessary to expand functions or plants – or to modify the drive concept.

#### Retrofit measures for drives:

- Replacement of older converters by new state-of-the-art medium-voltage drives
- Service advantages
  - 100 % availability of spare parts
  - Availability of know-how
  - Diagnostic options according to state-of-the-art technology
  - Low maintenance costs
  - Availability of software updates

#### Your advantages at a glance

- Lower maintenance costs in later lifecycle phases
- Increased efficiency
- Process optimization
- Improved energy efficiency and adaptation to latest environmental legislation
- Reduced risk as a result of faults

For ordering information on our extensive range of services, [see the right section](#).

### Service portfolio

The following services for medium-voltage converters can be directly ordered:

- Standard inspection of medium-voltage converters, for one unit:

| Description  | Duration | Order No.            |
|--|----------|----------------------|
| <b>Standard inspection for</b>   |          |                      |
| SINAMICS GM, air-cooled  | 2 days   | <b>9LD1240-0AA12</b> |
| SINAMICS GM, water-cooled plus water-cooled heat exchanger                           | 2 days   | <b>9LD1240-0AA13</b> |
| SINAMICS SM, air-cooled  | 2 days   | <b>9LD1240-0AA14</b> |
| SINAMICS SM, water-cooled plus water-cooled heat exchanger                           | 2 days   | <b>9LD1240-0AA15</b> |
| SINAMICS SM, air cooled plus excitation rectifier                                    | 2 days   | <b>9LD1240-0AA16</b> |
| SINAMICS GM, water-cooled plus water-cooled heat exchanger plus excitation rectifier | 3 days   | <b>9LD1240-0AA17</b> |

- Service products

| Description  | Order No.            |
|--|----------------------|
| <b>Repair order</b>  | <b>9LD1040-0AF00</b> |
| <b>Product support &amp; maintenance contract</b>                  | <b>9LD1360-0AF00</b> |
| <b>Field service call</b><br>for commissioning and troubleshooting | <b>9LD1140-0AF00</b> |
| <b>Retrofit order</b>  | <b>9LD1540-0AF00</b> |

#### Notes:

All services and service products are invoiced according to the actual costs incurred.

Ordering information and inquiries regarding quotations should be addressed to the responsible Siemens sales contact.

When ordering, the product should be specified with the order number, the associated serial number and the quotation number in the ordering text.

You can find further information at:

[www.siemens.com/ld-service](http://www.siemens.com/ld-service)

# Services and documentation

## SINAMICS GM150, SINAMICS SM150

Perfectly setup for global service  
over the complete lifecycle

### Extension of the liability for defects

For the products listed in this catalog, we also provide the option of extending the liability for defects period beyond the normal period. The standard liability for defects period, as listed in our standard conditions for the supply of services and products, is 12 months.

#### Extension of the liability for defects period when ordering new products

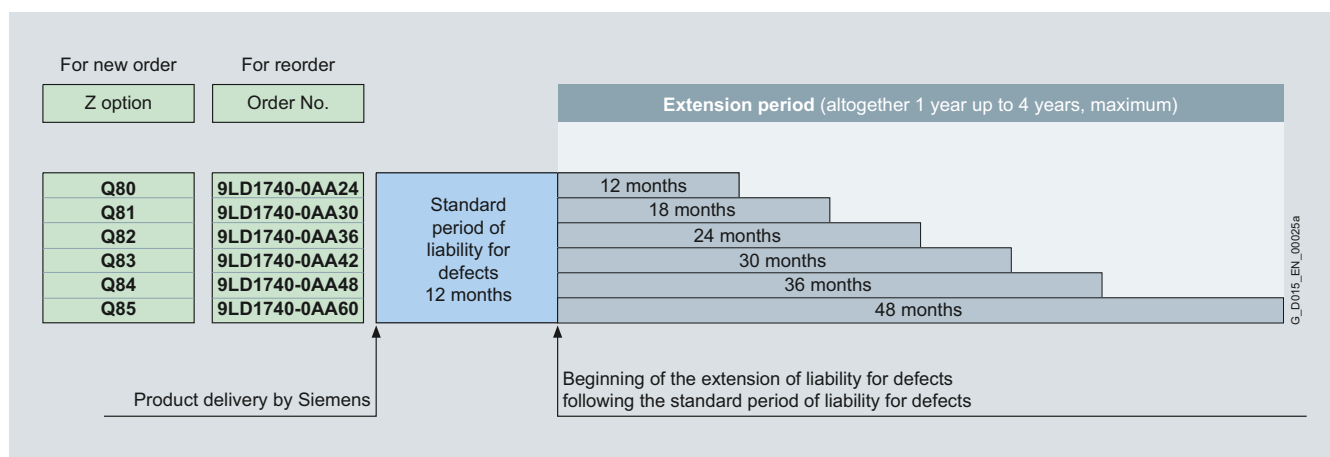

When ordering new products, the standard liability for defects period can be optionally extended for an additional price. Various extension periods can be selected.

| Extension of the liability for defects   | Order code   |
|--|--|
|  | The suffix "-Z" should be added to the converter order number followed by the order code for the required option |
| Extension of the liability for defects period by 12 months to a total of 24 months (2 years) after being delivered   | <b>Q80</b>   |
| Extension of the liability for defects period by 18 months to a total of 30 months (2.5 years) after being delivered | <b>Q81</b>   |
| Extension of the liability for defects period by 24 months to a total of 36 months (3 years) after being delivered   | <b>Q82</b>   |
| Extension of the liability for defects period by 30 months to a total of 42 months (3.5 years) after being delivered | <b>Q83</b>   |
| Extension of the liability for defects period by 36 months to a total of 48 months (4 years) after being delivered   | <b>Q84</b>   |
| Extension of the liability for defects period by 48 months to a total of 60 months (5 years) after being delivered   | <b>Q85</b>   |

#### Extension of the liability for defects period after the product has already been delivered

If a product has already been delivered, an extended liability for defects period can be ordered, if the original liability for defects period has still not expired. When ordering, in addition to the order number specified on the type plate, the serial number is also required.

| Extension of the liability for defects   | Order No.            |
|--|----------------------|
| Extension of the liability for defects period by 12 months to a total of 24 months (2 years) after being delivered   | <b>9LD1740-0AA24</b> |
| Extension of the liability for defects period by 18 months to a total of 30 months (2.5 years) after being delivered | <b>9LD1740-0AA30</b> |
| Extension of the liability for defects period by 24 months to a total of 36 months (3 years) after being delivered   | <b>9LD1740-0AA36</b> |
| Extension of the liability for defects period by 30 months to a total of 42 months (3.5 years) after being delivered | <b>9LD1740-0AA42</b> |
| Extension of the liability for defects period by 36 months to a total of 48 months (4 years) after being delivered   | <b>9LD1740-0AA48</b> |
| Extension of the liability for defects period by 48 months to a total of 60 months (5 years) after being delivered   | <b>9LD1740-0AA60</b> |

### Extension of the liability for defects

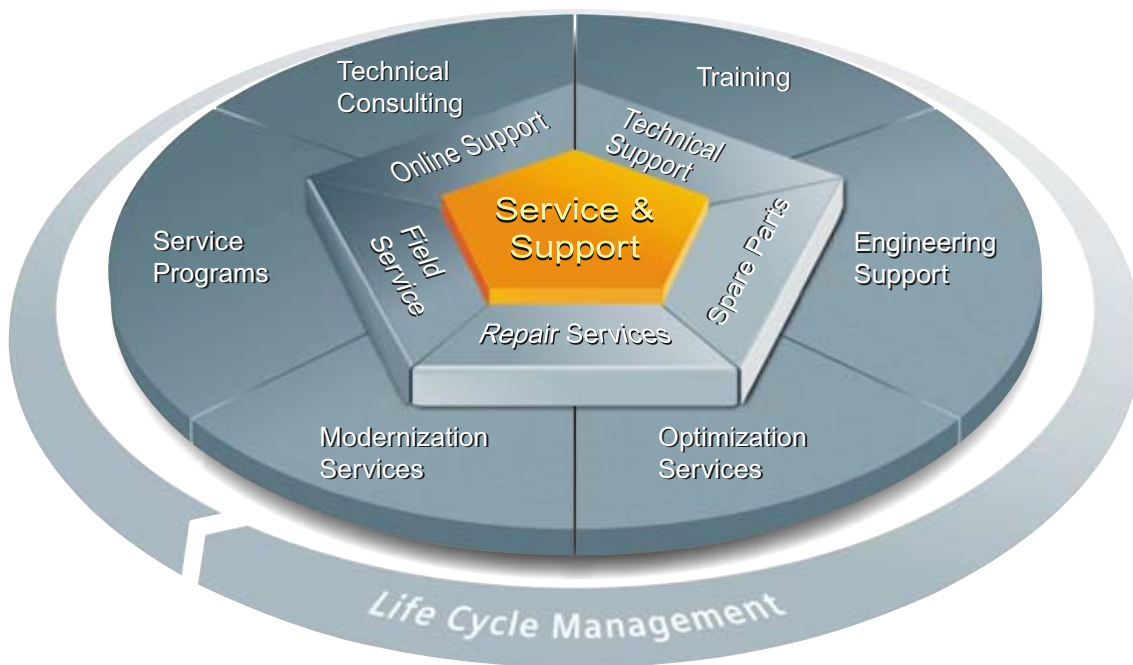

#### Conditions for an extension of the liability for defects:

- For all extension periods of liability for defects, for new and subsequent orders, the final destination of the product must be known.  
The EUNA process is available to obtain this information at [www.siemens.com/euna](http://www.siemens.com/euna), which must be performed by your local Siemens contact person.
  - For all 4 and 5 year extension periods of the liability for defects (Q84/9LD1740-0AA48, Q85/9LD1740-0AA60), this is only possible in conjunction with a corresponding maintenance contract with regular inspections. This maintenance contract must be signed and concluded with the responsible service department.  
This must be documented using the EUNA procedure at [www.siemens.com/euna](http://www.siemens.com/euna), which must be performed by your local Siemens contact person.
  - The general storage conditions described in the operating instructions must be adhered to, especially the specifications for long-term storage.
- Commissioning must be performed by appropriately qualified personnel. When making liability for defect claims, under certain circumstances, it may be necessary to submit the commissioning report to the department making the decision.
  - Periodic maintenance must be performed in accordance with the specifications of the operating instructions. When making liability for defect claims, under certain circumstances, it may be necessary to submit the corresponding maintenance documentation and history.
  - The operating conditions correspond to the specifications in the operating instructions, the installation instructions or specific conditions laid down in the contract.
  - The extended liability for defects excludes wearing parts such as fans or filters. This does not apply if it can be clearly proven that the failure is a premature one.
  - Otherwise, the general conditions regarding liability for defects applies as agreed in the delivery contract.

# Services and documentation

## Service & Support

Unmatched complete service  
for the entire life cycle

For machine constructors, solution providers and plant operators: The service offering from Siemens Industry, Automation and Drive Technologies includes comprehensive services for a wide range of different users in all sectors of the manufacturing and process industry

To accompany our products and systems, we offer integrated and structured services that provide valuable support in every phase of the life cycle of your machine or plant – from planning and implementation through commissioning as far as maintenance and modernization.

Our Service & Support accompanies you worldwide in all matters concerning automation and drives from Siemens. We provide direct on-site support in more than 100 countries through all phases of the life cycle of your machines and plants.

You have an experienced team of specialists at your side to provide active support and bundled know-how. Regular training courses and intensive contact among our employees – even across continents – ensure reliable service in the most diverse areas.

### Online Support

The comprehensive online information platform supports you in all aspects of our Service & Support at any time and from any location in the world.

[www.siemens.com/automation/service&support](http://www.siemens.com/automation/service&support)

### Technical Consulting

Support in planning and designing your project: From detailed actual-state analysis, definition of the goal and consulting on product and system questions right through to the creation of the automation solution.

### Technical Support

Expert advice on technical questions with a wide range of demand-optimized services for all our products and systems.

[www.siemens.com/automation/support-request](http://www.siemens.com/automation/support-request)

### Training

Extend your competitive edge – through practical know-how directly from the manufacturer.

[www.siemens.com/sitrain](http://www.siemens.com/sitrain)

Contact information is available in the Internet at:  
[www.siemens.com/automation/partner](http://www.siemens.com/automation/partner)

# Services and documentation

## Service & Support

Unmatched complete service  
for the entire life cycle

### Engineering Support

Support during project engineering and development with services fine-tuned to your requirements, from configuration through to implementation of an automation project.

### Modernization

You can also rely on our support when it comes to modernization – with comprehensive services from the planning phase all the way to commissioning.

### Field Service

Our Field Service offers you services for commissioning and maintenance – to ensure that your machines and plants are always available.

### Service programs

Our service programs are selected service packages for an automation and drives system or product group. The individual services are coordinated with each other to ensure smooth coverage of the entire life cycle and support optimum use of your products and systems.

The services of a service program can be flexibly adapted at any time and used separately.

### Spare parts

In every sector worldwide, plants and systems are required to operate with constantly increasing reliability. We will provide you with the support you need to prevent a standstill from occurring in the first place: with a worldwide network and optimum logistics chains.

### Product registration

To ensure high service performance (availability of spare parts, hotline service, availability of personnel), you can register your SINAMICS drive units. We can ensure a timely service response by letting us know the final destination (site location) and nominating a contact partner. You can provide us with this information either using the feedback form (enclosed with each converter) or via Internet:

<http://www.siemens.com/reg>

Examples of service programs:

- Service contracts
- Plant IT Security Services
- Life Cycle Services for Drive Engineering
- SIMATIC PCS 7 Life Cycle Services
- SINUMERIK Manufacturing Excellence
- SIMATIC Remote Support Services

Advantages at a glance:

- Reduced downtimes for increased productivity
- Optimized maintenance costs due to a tailored scope of services
- Costs that can be calculated and therefore planned
- Service reliability due to guaranteed response times and spare part delivery times
- Customer service personnel will be supported and relieved of additional tasks
- Comprehensive service from a single source, fewer interfaces and greater expertise

### Repairs

Downtimes cause problems in the plant as well as unnecessary costs. We can help you to reduce both to a minimum – with our worldwide repair facilities.

### Optimization

During the service life of machines and plants, there is often a great potential for increasing productivity or reducing costs. To help you achieve this potential, we are offering a complete range of optimization services.

Contact information is available in the Internet at:  
[www.siemens.com/automation/partner](http://www.siemens.com/automation/partner)

## SINAMICS GM150, SINAMICS SM150

### Glossary

#### Overview

##### **Active infeed**

Overall functionality of an infeed with → Active Line Module, including the required additional components (filters, switching devices, computing power portion of a → Control Unit, voltage detection, etc.).

For cabinet-mounted units, a → Motor Module can be used instead of the → Active Line Module.

##### **Active Line Module**

A controlled, self-commutated infeed/regenerative feedback unit (with IGBTs in infeed/feedback direction) which supplies a constant DC link voltage for the → Motor Modules.

##### **Induction motor**

The induction motor is an AC motor, which runs at a speed "lagging behind" the synchronous speed.

Induction motors can be connected to the AC line both directly in a star or delta circuit and via a converter.

When combined with a converter, induction motors form a "variable-speed drive system".

Other commonly used terms: squirrel-cage motor, cage motor.

See also → Synchronous motor.

##### **Output reactor**

Reactor (inductance) at the converter or inverter output for reducing the capacitive charge/discharge currents in long power cables.

##### **Basic infeed**

Overall functionality of an infeed with → Basic Line Module including the required additional components (filters, switching devices, etc.).

##### **Basic Line Module**

Unregulated line infeed unit (diode bridge or thyristor bridge, without feedback) for rectifying the line voltage for the DC link.

##### **CompactFlash Card**

Memory card for non-volatile storage of the drive software and corresponding parameters. The memory card can be plugged into the → Control Unit from the outside.

##### **Control Unit**

The central control module, in which the open-loop and closed-loop control

functions for one or more SINAMICS → Line Modules and/or → Motor Modules are implemented.

##### **DRIVE-CLiQ**

Abbreviation for "Drive Component Link with IQ".

Communication system for connecting the various components of a SINAMICS drive system, e.g. → Control Unit, → Line Modules, → Motor Modules, motors and speed/position encoders.

From a hardware perspective, DRIVE-CLiQ is based on the standard Industrial Ethernet with twisted-pair cables. The DRIVE-CLiQ line provides the transmit and receive signals and also the +24 V power supply.

##### **Field weakening**

Field weakening describes the reducing of the magnetizing current of an electric motor in order that the speed can be increased further when the rated voltage is reached.

##### **Non-Siemens motor**

A motor is designated as a non-Siemens motor if its motor data is not known to the drive line-up, and it cannot be identified by means of its order number.

The motor data of an external motor is required for commissioning. It must be entered manually in the corresponding parameters.

##### **Kinetic buffering**

Kinetic buffering (KIP) is a software function, which can be used to bridge transient line failures (up to approx. 1 s or as long as the drive continues to turn). Kinetic buffering can usually only be used on drives that are primarily motor-driven. It requires a sufficiently large centrifugal mass, i.e., sufficient kinetic energy, on the part of the mechanical transmission element. During the line failure, KIP switches the machine to no-load operation or light regeneration (in order to cover the minor losses from the motor and inverter). Once the line supply has been restored, the machine switches back to standard motor-driven operation.

In order to use kinetic buffering, the technological conditions must be in place to allow the motor to coast or brakes for the duration of the line failure. In some applications with multi-motor drives, the speed ratios between the individual drives have to be maintained during kinetic buffering, in order to prevent the web from tearing or damage. In such cases, kinetic buffering may only be activated on one of the drives (usually the main drive). The reduced speed setpoint values must then be fed into the overall setpoint cascade.

### Overview

#### **Line Module**

A Line Module is a power component, which creates the DC link voltage for one or several → Motor Modules from a three-phase line supply voltage.

The following types of Line Module are used in the SINAMICS system:

→ Basic Line Module and → Active Line Module.

#### **Motor Module**

A Motor Module is a power unit (DC-AC inverter) that provides the power supply for the connected motor.

Power is supplied through the → DC link of the drive line-up.

A Motor Module must be connected to a → Control Unit via → DRIVE-CLiQ. The open-loop and closed-loop control functions of the Motor Module are stored in the Control Unit.

#### **PROFIBUS**

Standardized fieldbus according to IEC 61158, Parts 2 to 6.

#### **PROFIdrive**

PROFIBUS profile specified for speed and position-controlled drives by the PROFIBUS user organization (German: PNO).

The latest version is the PROFIdrive V3 profile.

#### **Sensor Module**

Hardware module for evaluating speed/position encoder signals.

#### **Synchronous motor**

Synchronous motors run at the same frequency with which they are operated: They have no slip (which is the case with → induction motors). Synchronous motors require different feed-forward and feedback control concepts depending on their design to ensure that they can be operated with converters.

Synchronous motors are distinguished by the following features:

- permanent-field/separately excited
- with/without damping cage
- with/without position encoder.

Synchronous motors are used for different reasons:

- high drive dynamic response
- high overload capability
- high speed accuracy with exactly specified frequency (SIEMOSYN motors).

#### **Terminal Module**

Terminal extension module for snapping onto the installation rail, for installation in the control cabinet.

In SINAMICS, the TM31 Terminal Module is available with analog and digital I/O terminals.

#### **DC link**

The component of the converter (or converter system) that connects the input converter (rectifier) and the output converter (one or more inverters).

With voltage source DC link converters like SINAMICS, a constant DC voltage is present in the DC link (rectified line voltage).

## Partners at Industry Automation and Drive Technologies

At Siemens Industry Automation and Drive Technologies, more than 85 000 people are resolutely pursuing the same goal: long-term improvement of your competitive ability. We are committed to this goal. Thanks to our commitment, we continue to set new standards in automation and drive technology. In all industries – worldwide.

At your service locally, around the globe for consulting, sales, training, service, support, spare parts ... on the entire Industry Automation and Drive Technologies range.

Your personal contact can be found in our Contacts Database at: [www.siemens.com/automation/partner](http://www.siemens.com/automation/partner)

You start by selecting a

- Product group,
- Country,
- City,
- Service.

Online Services – Information and ordering  
in the Internet and on DVD

### Siemens Industry Automation and Drive Technologies in the WWW

A detailed knowledge of the range of products and services available is essential when planning and configuring automation systems. It goes without saying that this information must always be fully up-to-date.

Siemens Industry Automation and Drive Technologies has therefore built up a comprehensive range of information in the World Wide Web, which offers quick and easy access to all data required.

Under the address

[www.siemens.com/industry](http://www.siemens.com/industry)

you will find everything you need to know about products, systems and services.

### Product Selection Using the Interactive Catalog CA 01 of Industry

Detailed information together with convenient interactive functions:

The interactive catalog CA 01 covers more than 80 000 products and thus provides a full summary of the Siemens Industry Automation and Drive Technologies product base.

Here you will find everything that you need to solve tasks in the fields of automation, switchgear, installation and drives. All information is linked into a user interface which is easy to work with and intuitive.

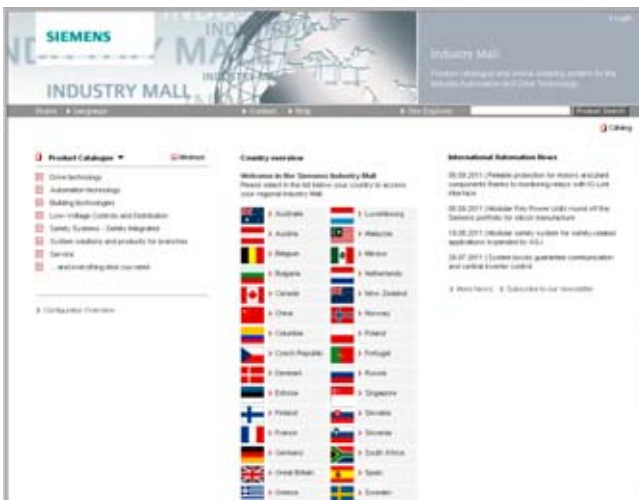

After selecting the product of your choice you can order at the press of a button, by fax or by online link.

Information on the interactive catalog CA 01 can be found in the Internet under

[www.siemens.com/automation/ca01](http://www.siemens.com/automation/ca01)

or on DVD.

### Easy Shopping with the Industry Mall

The Industry Mall is the virtual department store of Siemens AG in the Internet. Here you have access to a huge range of products presented in electronic catalogs in an informative and attractive way.

Data transfer via EDIFACT allows the whole procedure from selection through ordering to tracking of the order to be carried out online via the Internet.

Numerous functions are available to support you.

For example, powerful search functions make it easy to find the required products, which can be immediately checked for availability. Customer-specific discounts and preparation of quotes can be carried out online as well as order tracking and tracing.

Please visit the Industry Mall on the Internet under:

[www.siemens.com/industrymall](http://www.siemens.com/industrymall)

### Social Media Mobile Media

#### Social Media

Connect with Siemens through social media: visit our social networking sites for a wealth of useful information, demos on products and services, the opportunity to provide feedback, to exchange information and ideas with customers and other Siemens employees, and much, much more. Stay in the know and follow us on the ever-expanding global network of social media.

Connect with Siemens Industry at our central access point:

[www.siemens.com/industry/socialmedia](http://www.siemens.com/industry/socialmedia)

Or via our product pages at:

[www.siemens.com/automation](http://www.siemens.com/automation)

or

[www.siemens.com/drives](http://www.siemens.com/drives)

To find out more about Siemens' current social media activities visit us at:

[www.siemens.com/socialmedia](http://www.siemens.com/socialmedia)

#### Mobile Media

We are also constantly expanding our offering of cross-platform apps for smartphones and tablets. You will find the current Siemens apps at your app store.

## SINAMICS GM150, SINAMICS SM150

### Subject index

#### Numerics

24-pulse Basic Line Module (N15) ..... 6/37, 6/38

#### A

Access to other bus systems (G20 to G24 and G34) ..... 6/15  
 Accessories ..... 7  
 • for grounding and short-circuiting the converter ..... 7/2  
 • for replacing phase modules ..... 7/2  
 Additional analog inputs (E86) ..... 6/12  
 Additional analog outputs (E87) ..... 6/13  
 Additional TM15 Terminal Module (G63) ..... 6/20  
 Additional TM31 Terminal Module (G61) ..... 6/16 to 6/18  
 Air-cooled motors  
 • H-compact 1LA4 ..... 8/2  
 • H-compact 1PQ4 ..... 8/2  
 • H-compact PLUS 1RA4, 1RA6 and 1RP6 ..... 8/3  
 • H-compact PLUS 1RQ4 and 1RQ6 ..... 8/3  
 Anti-condensation heating for the cabinet (L55) ..... 6/26  
 AOP30 cabinet operator panel training case ..... 10/5  
 AOP30 Operator panel ..... 2/7, 3/6  
 Automatic restart (L32) ..... 6/23  
 Auxiliary voltage for open-loop and closed-loop control (C55) .. 6/11

#### B

Basic configuration (S05) ..... 6/40  
 Benefits  
 • SINAMICS GM150 IGBT version ..... 2/2  
 • SINAMICS GM150 IGCT version ..... 3/2  
 • SINAMICS SM150 IGBT version ..... 4/2  
 • SINAMICS SM150 IGCT version ..... 5/2  
 Bidirectional synchronized bypass operation (L29) ..... 6/22, 6/23  
 Braking Module (L72) ..... 6/27, 6/28  
 Braking resistor (Y73) ..... 6/42  
 Brass entry for power cables (M36) ..... 6/34

#### C

Cabinet lighting and service socket  
 in the closed-loop control section (L50) ..... 6/25  
 Capacitor Modules to increase the DC link capacitance  
 (N06 to N08) ..... 6/36  
 Capacitor tripping device  
 • 110 V to 120 V DC (N20) ..... 6/39  
 • 230 V DC (N21) ..... 6/39  
 Circuit-breaker ..... 9/10  
 • at the converter input (L52) ..... 6/37  
 • at the converter output (L52) ..... 6/25  
 Closed-loop control  
 • for permanently-excited synchronous motors (E03) ..... 6/12  
 • for separately-excited synchronous motors (E00 to E02) ..... 6/12  
 Commissioning tool STARTER ..... 7/13  
 Configuration SINAMICS GM150 IGCT version ..... 3/7  
 Connection of auxiliary voltage and signal cable  
 from above (M34) ..... 6/34  
 Control of "Safe Torque Off" (K80) ..... 6/21  
 Controlled motor feeder  
 for auxiliaries 400 V 3 AC/ 480 V 3 AC (N30 to N33) ..... 6/39  
 Controlled outgoing feeder  
 for auxiliaries 230 V 1 AC/ 120 V 1 AC (N35 to N38) ..... 6/40  
 Converter acceptance inspections  
 • in presence of customer (F03, F29, F73, F77, F79, F97) 6/13, 6/14  
 • without the customer present (F28, F72, F76) ..... 6/14  
 Converter prepared for the connection to an external air  
 discharge system with internal cabinet fans (M64) ..... 6/35  
 Converter without cooling unit provided plant-side (W14) ..... 6/41  
 Cooling unit ..... 9/8, 9/9  
 • with a titanium plate-type heat exchanger (W11) ..... 6/41  
 • with redundant stainless steel plate-type heat exchangers  
 (W02) ..... 6/41  
 • with titanium plate-type heat exchangers (W12) ..... 6/41  
 Customer's terminal strip  
 • with screw terminals for signal cables  
 up to 2.5 mm<sup>2</sup> (M33) ..... 6/33  
 • with spring-loaded terminals for signal cables  
 up to 2.5 mm<sup>2</sup> (M32) ..... 6/33  
 Customer-specific circuit diagrams (Y10) ..... 6/41

Notes

# Appendix

## SINAMICS GM150, SINAMICS SM150

### Conditions of sale and delivery

#### 1. General Provisions

By using this catalog you can acquire hardware and software products described therein from Siemens AG subject to the following Terms and Conditions of Sale and Delivery (hereinafter referred to as "T&C"). Please note that the scope, the quality and the conditions for supplies and services, including software products, by any Siemens entity having a registered office outside Germany, shall be subject exclusively to the General Terms and Conditions of the respective Siemens entity. The following T&C apply exclusively for orders placed with Siemens Aktiengesellschaft, Germany.

##### 1.1 For customers with a seat or registered office in Germany

For customers with a seat or registered office in Germany, the following applies subordinate to the T&C:

- the "General Terms of Payment"<sup>1)</sup> and,
- for software products, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or Registered Office in Germany"<sup>1)</sup> and,
- for other supplies and services, the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"<sup>1)</sup>.

##### 1.2 For customers with a seat or registered office outside Germany

For customers with a seat or registered office outside Germany, the following applies subordinate to the T&C:

- the "General Terms of Payment"<sup>1)</sup> and,
- for software products, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or Registered Office outside of Germany"<sup>1)</sup> and
- for other supplies and/or services, the "General Conditions for Supplies of Siemens Industry for Customers with a Seat or Registered Office outside of Germany"<sup>1)</sup>.

#### 2. Prices

The prices are in € (Euro) ex point of delivery, exclusive of packaging.

The sales tax (value added tax) is not included in the prices. It shall be charged separately at the respective rate according to the applicable statutory legal regulations.

Prices are subject to change without prior notice. We will charge the prices valid at the time of delivery.

To compensate for variations in the price of raw materials (e.g. silver, copper, aluminum, lead, gold, dysprosium and neodym), surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The metal factor of a product indicates the basic official price (for those raw materials concerned) as of which the surcharges on the price of the product are applied, and with what method of calculation.

An exact explanation of the metal factor can be downloaded at:

[www.siemens.com/automation/salesmaterial-as/catalog/en/terms\\_of\\_trade\\_en.pdf](http://www.siemens.com/automation/salesmaterial-as/catalog/en/terms_of_trade_en.pdf)

To calculate the surcharge (except in the cases of dysprosium and neodym), the official price from the day prior to that on which the order was received or the release order was effected is used.

To calculate the surcharge applicable to dysprosium and neodym ("rare earths"), the corresponding three-month basic average price in the quarter prior to that in which the order was received or the release order was effected is used with a one-month buffer (details on the calculation can be found in the explanation of the metal factor).

#### 3. Additional Terms and Conditions

The dimensions are in mm. In Germany, according to the German law on units in measuring technology, data in inches apply only to devices for export.

Illustrations are not binding.

Insofar as there are no remarks on the individual pages of this catalog - especially with regard to data, dimensions and weights given - these are subject to change without prior notice.

#### 4. Export regulations

We shall not be obligated to fulfill any agreement if such fulfillment is prevented by any impediments arising out of national or international foreign trade or customs requirements or any embargoes and/or other sanctions.

Export of goods listed in this catalog may be subject to licensing requirements. We will indicate in the delivery details whether licenses are required under German, European and US export lists. Goods labeled with "AL" not equal to "N" are subject to European or German export authorization when being exported out of the EU. Goods labeled with "ECCN" not equal to "N" are subject to US re-export authorization.

The export indications can be viewed in advance in the description of the respective goods on the Industry Mall, our online catalog system. Only the export labels "AL" and "ECCN" indicated on order confirmations, delivery notes and invoices are authoritative.

Even without a label, or with label "AL:N" or "ECCN:N", authorization may be required i .a. due to the final disposition and intended use of goods.

If you transfer goods (hardware and/or software and/or technology as well as corresponding documentation, regardless of the mode of provision) delivered by us or works and services (including all kinds of technical support) performed by us to a third party worldwide, you must comply with all applicable national and international (re-)export control regulations.

If required for the purpose of conducting export control checks, you (upon request by us) shall promptly provide us with all information pertaining to the particular end customer, final disposition and intended use of goods delivered by us respectively works and services provided by us, as well as to any export control restrictions existing in this relation.

The products listed in this catalog may be subject to European/German and/or US export regulations. Any export requiring approval is therefore subject to authorization by the relevant authorities.

Errors excepted and subject to change without prior notice.

| for Industry Automation, Drive Technologies and Low Voltage Distribution  | <b>CA 01</b>    |  |  |
| <hr/>   |                 |  |  |
| <b>Drive Systems</b>  |                 |  |  |
| <u>Variable-Speed Drives</u>  |                 |  |  |
| SINAMICS G130 Drive Converter Chassis Units   | D 11            |  |  |
| SINAMICS G150 Drive Converter Cabinet Units   |                 |  |  |
| SINAMICS GM150, SINAMICS SM150 Medium-Voltage Converters  | D 12            |  |  |
| ROBICON Perfect Harmony Medium-Voltage Air-Cooled Drives Germany Edition  | D 15.1          |  |  |
| SINAMICS S120 Chassis Format Units and Cabinet Modules  | D 21.3          |  |  |
| SINAMICS S150 Converter Cabinet Units   |                 |  |  |
| SINAMICS DCM Converter Units  | D 23.1          |  |  |
| SINAMICS and Motors for Single-Axis Drives  | D 31            |  |  |
| <u>Three-phase Induction Motors</u>   | D 84.1          |  |  |
| • H-compact   |                 |  |  |
| • H-compact PLUS  |                 |  |  |
| Asynchronous Motors Standardline  | D 86.1          |  |  |
| Synchronous Motors with Permanent-Magnet Technology, HT-direct  | D 86.2          |  |  |
| DC Motors   | DA 12           |  |  |
| SIMOREG DC MASTER 6RA70 Digital Chassis Converters  | DA 21.1         |  |  |
| SIMOREG K 6RA22 Analog Chassis Converters   | DA 21.2         |  |  |
| <i>PDF: SIMOREG DC MASTER 6RM70 Digital Converter Cabinet Units</i>   | DA 22           |  |  |
| SIMOVERT PM Modular Converter Systems   | DA 45           |  |  |
| SIEMOSYN Motors   | DA 48           |  |  |
| MICROMASTER 420/430/440 Inverters   | DA 51.2         |  |  |
| MICROMASTER 411/COMBIMASTER 411   | DA 51.3         |  |  |
| SIMOVERT MASTERDRIVES Vector Control  | DA 65.10        |  |  |
| SIMOVERT MASTERDRIVES Motion Control  | DA 65.11        |  |  |
| Synchronous and asynchronous servomotors for SIMOVERT MASTERDRIVES  | DA 65.3         |  |  |
| SIMODRIVE 611 universal and POSMO   | DA 65.4         |  |  |
| <i>Note:</i>  |                 |  |  |
| <i>Additional catalogs on SIMODRIVE or SINAMICS drive systems and SIMOTICS motors with SINUMERIK and SIMOTION can be found under Motion Control</i> |                 |  |  |
| <u>Low-Voltage Three-Phase-Motors</u>   |                 |  |  |
| SIMOTICS Low-Voltage Motors   | D 81.1          |  |  |
| MOTOX Geared Motors   | D 87.1          |  |  |
| SIMOGEAR Geared Motors  | MD 50.1         |  |  |
| <u>Mechanical Driving Machines</u>  |                 |  |  |
| FLENDER Standard Couplings  | MD 10.1         |  |  |
| FLENDER SIG Standard industrial gear unit   | MD 30.1         |  |  |
| FLENDER SIP Standard industrial planetary gear units  | MD 31.1         |  |  |
| <hr/>   |                 |  |  |
| <b>Low-Voltage Power Distribution and Electrical Installation Technology</b>  |                 |  |  |
| SENTRON Protection, Switching, Measuring and Monitoring Devices   | LV 10.1         |  |  |
| SIVACON · ALPHA Switchboards and Distribution Systems   | LV 10.2         |  |  |
| SIVACON 8PS Busbar Trunking Systems   | LV 70           |  |  |
| GAMMA Building Control  | ET G1           |  |  |
| <i>PDF: DELTA Switches and Socket Outlets</i>   | ET D1           |  |  |
