

Digitax ST

Intelligent Servo Technology

NEW

Meeting the demands of modern, lean manufacturing requires smaller more flexible machinery. Digitax ST is the first drive designed to help machine designers and system integrators meet these challenges, the ultimate compact servo drive with an unmatched range of flexible integration features.

Digitax ST is optimized for servo applications requiring high peak torque, dynamic response, ease of use and flexible integration features. Four product variants ensure that the drive's personality perfectly matches your servo applications. Solution Modules (SM) provide zero-space fieldbus and I/O connectivity to other automation components.

Digitax ST

- Internal Motion Processor does not consume an external slot
- Flexible voltages 200-230 VAC or 380-460 VAC
- 1 to 109 lb-in continuous torque up to 3X peak torque
- Supports 14 types of encoders, SM-Resolver option
- Easy install, setup and operation
 - Compact, space saving design
 - Pluggable connectors, standard D-Shell and screw terminals
 - Safe Torque Off
 - Programmable, optically-isolated I/O
 - RS485 serial communication interface using Modbus protocol
- Many industrial communications protocols supported
- Field programmable flash memory firmware (upgrades are free)
- Wide variety of motor combinations
- Auto-Tune support for any servo motor with encoder feedback
- 24 VDC on-board logic power supply

FEATURE

Performance Advantage

Four Configurations Available

- Digitax ST-B Base drive
- Digitax ST-I Indexer
- Digitax ST-Z EZMotion
- Digitax ST-P Plus

Digitax ST Base Drive – Multiple Operating Modes

Optimized for centralized control, to operate with motion controllers, motion PLC's, and PC-based motion systems using a wide range of digital or analog interface technologies.

Digitax ST Indexer – Simple & Powerful Capabilities

Internal SM-Applications Lite V2. Designed for simple stand alone positioning applications using an onboard position controller using Sequential Function Flowchart software.

Digitax ST EZMotion – Drag-and-Drop Programming

Internal SM-EZMotion. Easy Motion simplifies programming with built-in motion functionality – jogging, indexing, camming, can be done in minutes with PowerTools Pro software and its point-and-click, drag-and-drop motion programming environment. It's "Motion Made Easy"™.

Digitax ST Plus – Provides Advanced Capabilities

Internal SM-Applications Plus. Features a full functionality motion controller, optimized for high performance machine cells requiring drive-to-drive networking and precision synchronization. The motion and communications are configured within a flexible IEC61131-3 software development environment SyPTPro.

Compatible Solution Modules provide Communication, I/O and Feedback expansion options

Communication: Ethernet IP, Modbus TCP/IP, Profibus, DeviceNet, CAN and EtherCAT.

I/O: SM-I/O Plus, SM-I/O Lite, SM-I/O 32, SM-I/O Timer, SM-I/O 120V, SM-I/O PELV and SM-I/O 24V.

Feedback: SM-Universal Encoder, SM-Encoder Plus, SM-Encoder Output Plus and SM-Resolver.

Smart, Compact, Ergonomic Design

Digitax ST

Value Your Time

More Compact Machinery

Digitax ST is an extremely compact servo drive that can be mounted flush against another Digitax ST, resulting in a smaller multiple axis footprint. Onboard features such as synchronized motion control and Safe Torque Off reduce the need for external components further reducing panel size and cost.

Quicker Installation

Innovative mechanical design reduces the installation time considerably. The mounting arrangements enable the bottom of the drive to be quickly clipped onto standard DIN rail and the cable management system features rigid mounting and earthing brackets. Pluggable control terminals enable cables to be easily prepared. Snap-in option modules mean the drive can be customized to your needs at the point of installation without specialized tools and gives the flexibility to customize the functionality at a future time.

Reduced Commissioning Time

Digitax ST is quick and easy to set-up. The drives may be configured using the removable keypad, SmartCard or the supplied commissioning software to guide the user through the configuration process. Auto-tune features help you to get the best performance by measuring the machine dynamics and automatically optimizing the control loop gains. PowerTools Pro and CTScope software tools provide users with real-time, software oscilloscopes for tuning the drive and monitoring performance.

Smarter Thinking

The SmartCard, included with every drive, enables parameters to be safely stored and copied quickly from one drive to another. This feature significantly reduces the commissioning time when installing multiple servo systems with similar configurations.

SMARTCARD

Digitax ST-B

Flexible Base Drive

NEW

The Digitax ST-B (base) drive is a compact drive that is ideal for use with single and multi-axis controllers, PLCs and host controllers. The analog torque or velocity modes can be used with classic position controllers using analog outputs and encoder inputs. The pulse mode is ideal for use with low-cost PLC stepper controllers.

Many control systems use SERCOS fiber optic or EtherCAT for real-time drive control and feedback. Both technologies offer high bandwidth command and control signals over a digital network, greatly simplifying cabling and reducing potential electrical noise issues. Simply snap-in the appropriate SM module and the base drive is SERCOS or EtherCAT compliant.

The drive is configurable for several flexible modes of operation, and the parameters for each mode can be adjusted to tailor the drive to the specific application using CTSOft configuration software or the optional keypad.

Digitax ST

- 200-230 VAC or 380-460 VAC input voltage
- 2 Solution Module (SM) slots for optional Feedback, Communications or I/O modules
- Safe Torque Off / Drive Enable Input
- 3 Bi-Directional Input/Outputs
- 3 Dedicated Inputs
- 1 Relay Output
- 1 High Resolution Analog Input, 16 bit + sign
- 2 Standard Analog Inputs, 10 bit + sign
- 2 Analog Outputs ± 10 VDC, 10 bit
- Buffered Encoder Output
- Universal Encoder Input, supports 14 feedback types
- Optional Resolver Input with SM Resolver module
- Optional Keypad
- CTSOft configuration software
- RS485 Serial Port, Modbus RTU

Digitax ST-I

Intelligent Indexing Drive

The Digitax ST-I (Indexer) drive offers sequential flow chart programming for indexing, homing and jogging, in a package that is the same compact size as the base Digitax ST-B drive. Operating information is setup using CTSOft programming and commissioning software. The drive parameter setup can be downloaded, stored on disk, or saved to the SmartCard for drive cloning. The SmartCard saves time and money during installation and makes long term support simple by having all the drive parameters stored on the SmartCard for easy drive cloning. No PC or software is necessary to save or load data on the SmartCard.

WIZARD SETUP!

Using the new CTSOft drive setup wizard makes the Indexer setup quick and simple. The Wizard guides you through setup for the drive setup, motor, encoder, I/O and Sequential Function Chart programming.

- 200-230 VAC or 380-460 VAC input voltage
- Internal motion controller programs with free Sequential Function Chart software
- 2 Solution Module (SM) slots for optional Feedback, Communications or I/O modules
- Safe Torque Off / Drive Enable Input
- 3 Bi-Directional Input/Outputs
- 3 Dedicated Inputs
- 1 Relay Output
- 1 High Resolution Analog Input, 16 bit + sign
- 2 Standard Analog Inputs, 10 bit + sign
- 2 Analog Outputs ± 10 VDC, 10 bit
- Buffered Encoder Output
- Universal Encoder Input, supports 14 feedback types
- Optional Resolver Input with SM Resolver module
- Optional Keypad
- CTSOft configuration software
- RS485 Serial Port, Modbus RTU

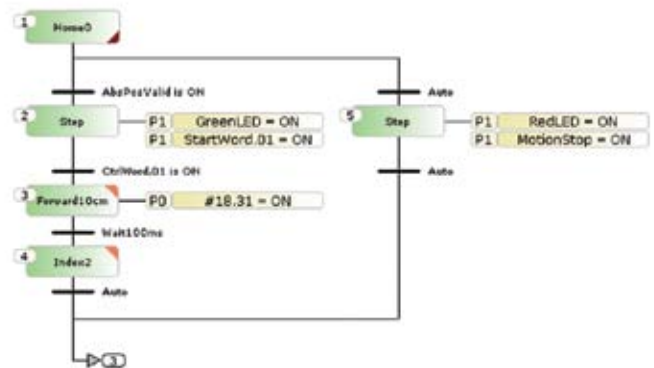

Digitax ST

INDEXING

The Digitax ST-I drive is easily programmed to meet a wide variety of indexing and I/O control requirements. Sequential Function Chart programming is straightforward to use and interpret. Pre and Post operations at each step allow flexible I/O control.

- Incremental, Absolute, Registration, Rotary Plus, and Rotary Minus index types
- Parameters for Distance, Velocity, Accel/Decel, Dwell and Registration to Sensor or Torque Levels
- Chaining Options – Counts, Repeat Counts, Repeat Forever, Stop ability

Sequential Function Chart

Digitax ST-Z

Internal EZMotion Module

The Digitax ST-Z (EZMotion) drive provides a very high level of control by allowing the user to create complete user programs to sequence the motion control along with other machine functionality. The Digitax ST-Z can be used to solve the most complex motion applications and still be easy-to-use because of the PowerTools Pro configuration software. PowerTools Pro uses simple point-and-click, drag-and-drop and fill-in-the-blank views that make setup a snap.

User programs are created using a text based motion language that is as easy to read as it is to program. If you don't know the command, just drag it in from the drop down box and PowerTools Pro will assist you with the syntax. With intuitive software and plenty of online help, programming this servo drive is easy; in fact it's **"Motion Made Easy!"™**

See *PowerTools Pro* in the *Software* section for examples of this easy to use program. The examples provided range from simple to advanced applications.

Digitax ST

POWERFUL SOFTWARE FEATURES!

Digitax ST-Z has many powerful software features to meet the most demanding servo application while maintaining ease of use. Complete machine control is now possible with the drive's motion, I/O and communications capabilities.

- **200-230 VAC or 380-460 VAC input voltage**
- **Internal SM-EZMotion module**
- **PowerTools Pro configuration software**
- **2 Solution Module (SM) slots for optional Feedback, Communications or I/O modules**
- **Safe Torque Off / Drive Enable Input**
- **3 Bi-Directional Input/Outputs**
- **7 Dedicated Inputs**
- **2 Dedicated Outputs**
- **1 Relay Output**
- **1 High Resolution Analog Input, 16 bit + sign**
- **2 Standard Analog Inputs, 10 bit + sign**
- **2 Analog Outputs ±10 VDC, 10 bit**
- **Buffered Encoder Output**
- **Universal Encoder Input, supports 14 feedback types**
- **Optional Resolver Input with SM Resolver module**
- **Optional Keypad**
- **RS485 Serial Port, Modbus RTU**

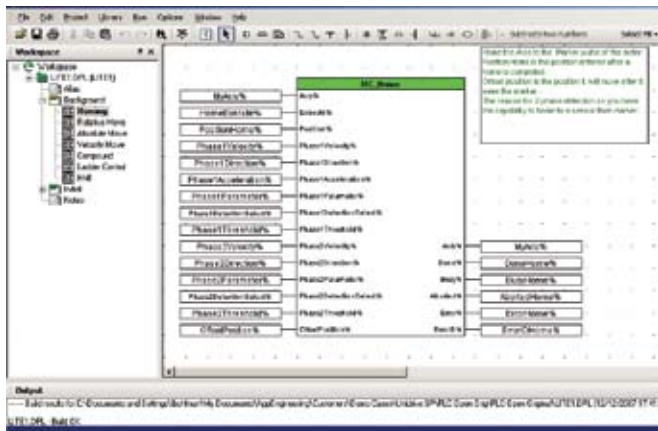

- **Virtual Master** - Provides a programmable clock signal for many drives to follow, eliminating mechanical jitter from following a physical axis.
- **Modbus Master** - Provides drive-to-drive and expanded I/O control with the built in master. The drive is not limited to onboard I/O. Communications to other Modbus slave devices is possible.
 - Multiple drives can share I/O over the networks
 - Stop/Start control such as VFD driven conveyors
 - Use low cost slice I/O to add digital and analog I/O
- **Real-Time Programs** - Provides deterministic program cycle times for controlling I/O and scheduling program tasks.
- **Torque Mode** - Switch seamlessly from position or velocity mode into torque mode and back for unlimited flexibility and control for nut running and torque controlled clamps or grippers or any other controlled torque application.
- **Electronic Camming** - Electronic cams provide unlimited motion profiles to accomplish servo replacement of rigid mechanical cams. Use the internal time base to create a motion profile for custom indexing.

Digitax ST-P Programmable Motion

NEW

The Digitax ST-P (Plus) features a full functionality motion controller, optimized for high performance machine cells requiring drive-to-drive networking and precision synchronization. The motion and communications are configured within a flexible IEC61131-3 software development environment using PLCopen function blocks. Fieldbus, Ethernet and I/O connectivity enable interfacing with other automation components and Intellectual Property protection ensures that your valuable knowledge remains secure.

Digitax ST

POWERFUL SOFTWARE FEATURES!

Digitax ST-P (Plus) offers all of the features available on the indexing drive together with more advanced motion functionality including cam profiling and synchronized motion. Onboard drive-to-drive networking links multiple axes and enables true distributed control. The drive is commissioned using CTSOft, an intuitive drive configuration software that is included free with every drive. The advanced motion features are configured using PLCopen motion function blocks within Control Techniques SyPTPro automation development environment.

On-board position controller ensures superior performance and reduced panel space. Digitax ST-P is configured using Control Techniques market leading development environment, SyPTPro. Standard IEC61131-3 languages, multi-tasking and PLCopen motion function blocks increase familiarity and reduce the development time. SyPTPro can protect your Intellectual Property by downloading only the compiled binary version of your software (not the source code) therefore preventing your customers and competitors from accessing your work. Many machinery users have different site standards for PLCs. This presents you with the challenge of designing standard machine sections that are independent of your customers PLC preference. With on-board intelligence, drive-to-drive synchronization and a wide range of network communication options, Digitax ST makes it easy for you to standardize your designs while retaining full connectivity to any PLC.

- **200-230 VAC or 380-460 VAC input voltage**
- **Internal SM Applications Plus module**
- **SyPTPro motion programming software**
- **2 Solution Module (SM) slots for optional Feedback, Communications or I/O modules**
- **Safe Torque Off / Drive Enable Input**
- **3 Bi-Directional Input/Outputs**
- **5 Dedicated Inputs**
- **2 Dedicated Outputs**
- **1 Relay Output**
- **1 High Resolution Analog Input, 16 bit + sign**
- **2 Standard Analog Inputs, 10 bit + sign**
- **2 Analog Outputs ±10 VDC, 10 bit**
- **Buffered Encoder Output**
- **Universal Encoder Input, supports 14 feedback types**
- **Optional Resolver Input with SM Resolver module**
- **Optional Keypad**
- **CTSOft configuration software**
- **RS485 Serial Port, Modbus RTU**

Digitax ST Software

CTSoft for Digitax ST Base and Digitax ST Indexer

Digitax ST Base and Indexing drives use CTSoft, the Control Techniques drive configuration tool used to commission, optimize and monitor most Control Techniques AC and DC drives.

CTSoft uses wizards to simplify commissioning, manages data stored on the SmartCard, and has robust and graphical tools for monitoring and trouble shooting.

CTSoft also incorporates the industry-standard Sequential Function Chart language for configuring the Digitax Indexer.

PowerTools Pro "Motion Made Easy"™ software for Digitax ST EZMotion

Developing servo applications with Control Techniques "Motion Made Easy" PowerTools Pro is a simple "five step, top-down process," all displayed within an intuitive Windows™ explorer-like environment—Setup (hardware), I/O Setup, Motion, Programs, and Network.

Although not every step may be needed to create a motion program, each step is configured using simple check boxes, drop down menus, and point-and-click, drag-and-drop operations. A straight-forward text programming language can also be used for custom motion and machine control sequences.

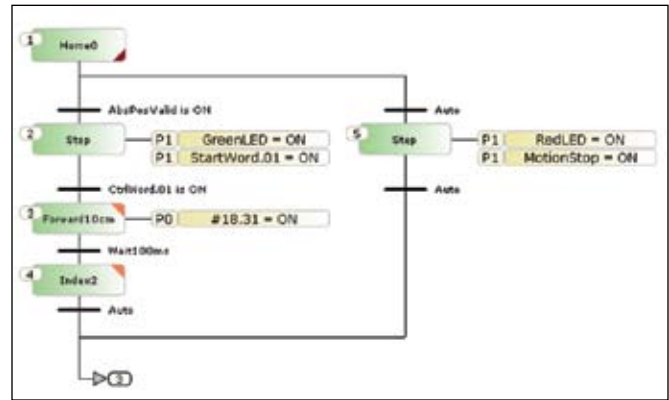

SyPTPro for Digitax ST Plus

SyPTPro is a full-featured, IEC-61131-3-compliant automation development environment that can be used for developing solutions for single or multiple axis applications.

The programming environment supports four industry standard languages: PLC Open, Function Block, Ladder and Structured Text.

CTNet, a high-speed, drive-to-drive network links the drives, SCADA and I/O together form an intelligent networked system, eliminating the need for a PLC and its additional overhead.

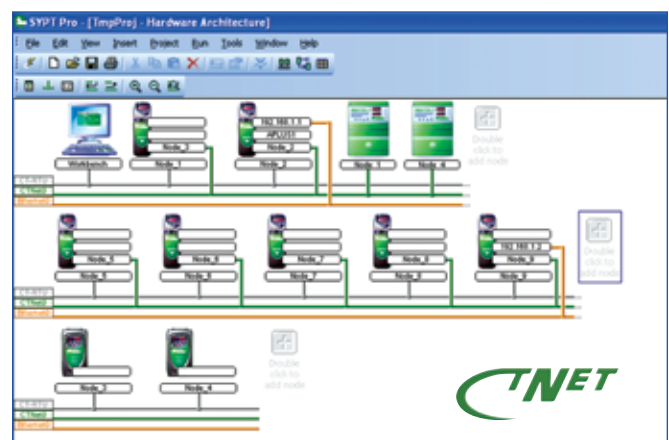

See the Software Section of the catalog for complete software details.

HOW TO ORDER

Use one of the next few pages to configure a basic Digitax ST system by selecting one item from each of the four ordering columns, and the fifth column if you are choosing a brake motor. Note that item ② motor selection requires additional input as to flange, and on NT systems, connector type. (See the Motor Order String boxes for details.) Items ③ through ⑤ require cable lengths to be provided. The basic systems represented on these pages can be customized with a variety of components depending on your needs. A guide to Digitax ST Options and Accessories can be found at the end of this section.

SELECT SYSTEM AND MOTOR

- ① Select the Digitax ST drive appropriate to the needs of your application and operating environment, either DST-B (Base), DST-I (Indexer), DST-Z (EZMotion) or DST-P (Plus) and the voltage and current ratings.
- ② Select a motor for your drive. The system selection matrix for FM, NT and XV standard motors can be found on the following pages.

CABLE ORDERING OPTIONS

Motor power, feedback and brake cables are fully shielded with connectors and are available in standard and custom lengths. For more information on these and other cables, see *Options and Accessories section*.

Standard lengths of 5, 15, 25, 50 and 100 feet are available from stock. Non-standard lengths require additional lead time. **Note: Equivalent FM Motor cable lengths are in meters.**

Feet=xxx or meters=yyy with specified lengths. Example: 005 = 5 feet. For applications involving continuous flexing, flexible cables are available. Cable components such as connector kits and raw cable are also available. See Options and Accessories section for details or consult factory for special requirements.

- ③ **Motor Power Cable Example;**
CMDS-xxx 16 AWG for 2-3" motors; connector on motor end, ferrules on drive end
- ④ **Motor Feedback Cable Example;**
UFCS-xxx Connectors on both ends.
- ⑤ **Motor Brake Cable Example;**
CBMS-xxx Required for motors with brake option; connector on motor end only.

Software

The Control Techniques SM-EZMOTION CD (CT-EZMOTION-CD) is shipped with every product. Software updates are free and can be downloaded from our web site, as are firmware updates.

Note: Digitax (ST-B, ST-I) Base and Indexer drives use CT Soft (free software), Digitax ST-Z EZMotion drive uses PowerTools Pro (free software) and Digitax ST-P Plus drive uses SyPTPro (licensed software).

DIGITAX ST OPTIONS AND ACCESSORIES

Control Techniques provides a complete array of options and accessories to complete your system. For details, see the Options and Accessories section of the catalog.

Digitax ST

230V FM Motor Selection

The FM motor line is a medium inertia servo motor suitable for larger inertial load applications. The FM motor line uses a 4096 line encoder for high precision and is designed with low cogging torque to provide smooth operation and excellent velocity regulation. FM motors are available with or without brakes. The system torque range is from 10.6 lb-in (1.2 Nm) to 62 lb-in (7.1 Nm).

This is a flexible motor line with numerous options available including: feedback, connectors, brake, high inertia and faceplate mounting.

460V FM Motor Selection

The FM motor line is a medium inertia servo motor suitable for larger inertial load applications. The FM motor line uses a 4096 line encoder for high precision and is designed with low cogging torque to provide smooth operation and excellent velocity regulation. FM motors are available with or without brakes. The system torque range is from 15.9 lb-in (1.8 Nm) to 109 lb-in (12.4 Nm).

This is a flexible motor line with numerous options available including: feedback, connectors, brake, high inertia and faceplate mounting.

230V NT Motor Selection

The NT Series Motors deliver high torque-power to motor-size ratios that were previously impossible. Using the latest motor design and production technology greatly reduces motor size. High-energy neodymium iron born magnets give the NT motor high torque output and low rotor inertia, providing superior dynamic performance for servo applications. The NT motor design delivers up to 46% more torque in 20% less space when compared to standard high-performance motor designs.

230V XV Motor Selection

The new XV Servo Motor line delivers high-performance, low inertia, and high torque in a compact motor package. It offers a low cost solution with the features of a premium priced servo offering. Intended for higher throughputs and smaller machines, XV motors are available in four frame sizes: 40, 60, 80 and 130 mm with speeds ranging from 2000 to 5000 RPM.

System Torque range is 3.1 lb-in (.3 Nm) to 105 lb-in (11.4 Nm).

XV motors are CE, UL and RoHS approved.
