

Type of protection :

DACROMET 500

Principle :

Non electrolytic metal coating (no embrittlement) which protects the functionality of the protected parts with a thin layer.

Advantages of Dacromet :

- Better corrosion resistance than many other protection systems for the same thickness
- Resistance to salty air for more than 800 hrs
- No lubrication required
- Resistant to heat while maintaining protective properties up to 280°C
- Good resistance to solvents, fuels and hydraulic liquids
