

NGS Valve Cleaner

This non-hazardous, environmentally friendly product is designed to clean important valve seal faces and internal sealant passages.

In many cases, simply cleaning the seat sealant system and/or valve body will loosen seized metal components and clean build-up and debris from critical sealing surfaces. In many cases this may solve the problem. Always start with cleaning.

DESCRIPTION

Valve Cleaner Plus is not a sealant, it is a combination of solvent and semi-synthetic lubrication oils formulated to be injected directly into the seat sealant system to clean important seal faces and sealant passages. Cycle the valve (if permitted) to ensure complete coverage, to allow the valve cleaner to soften old sealants and remove residual build-up from seal points. Valves with severe or persistent leakage may require more wait time. The best results are achieved by displacing the valve cleaner with equal quantities of lubricant/ sealant after cleaning. This product is recommended for use in ball, gate or plug valves and orifice fittings. It's also designed for use at refineries, wellheads, pump or compressor stations and in gas distribution systems.

- Non-Flammable
- Non-Carcinogenic
- Non-Ozone Depleting

Product Specifications

Base Oil	Semi-synthetic
Colour	Black
Drop Point	+ 235° C or + 455° F
Texture	Thin paste
Pressure	10,000 PSI
ASTM Penetration	250 - 340
Compatibility	Dispersant
Solvent Resistance	N/A
Special Additives	Molybdenum Disulfide
Composition	Semi-liquid
Temperature Range	- 40° C to + 204° C
