# coax<sup>®</sup> data sheet - coaxial valve

## type MK 15 FK 15

08/2022

Above stated body materials refer to the valve port connections that get in contact with the media only!

de	tails	nee	de	d

orifice
port
function NC/NO
operating pressure
flow rate
media
media temperature
ambient temperature
nominal voltage

The valves' technical design is based on media and application requirements. This can lead to deviations from the general specifications shown on the data sheet with regards to the design, sealing materials and characteristics.

If order or application specifications are incomplete or imprecise there exists a risk of an incorrect technical design of the valve for the required application. As a consequence, the physical and / or chemical properties of the materials or seals used, may not be suitable for the intended application. To avoid hydraulic shocks in pipelines, the flow velocities must be taken into account when designing valves for liquids.

specifications not highlighted are standard specifications highlighted in grey are optional
