Adjustment Methods

● Adjusting the E3S-LS10XE4 Convergent-reflective Sensor

1. Attach the distance adjustment scale as shown in the figure and set it where the * mark is equal to the sensing distance.
2. Turn the distance adjuster until the red spot is at point A (center of the distance adjustment scale).
3. Remove the distance adjustment scale once the distance has been adjusted. Put a sensing object in place, and then adjust the sensitivity.

● Adjusting the E3S-LS20XE4 Convergent-reflective Sensor

Adjustment Method 1

Use this method if the sensing object is more reflective than the background.

1. Set the sensitivity adjuster to the center as shown in the figure.
2. Turn the distance adjuster counterclockwise until it is fully turned (L to S).
3. Position the sensing object.
4. Slowly turn the distance adjuster clockwise (S to L).
5. Eventually the LIGHT (red) indicator will light. Turning the adjuster further will light the STABILITY (green) indicator. Leave the distance adjuster at this level.
6. Adjust the sensitivity in this state.

Adjustment Method 2

Use this method if the background is more reflective than the sensing object.

1. Set the sensitivity adjuster to the center as shown in the figure.
2. Turn the distance adjuster clockwise until it is fully turned (S to L).
3. Remove the sensing object.
4. Slowly turn the distance adjuster counterclockwise (L to S).
5. Eventually the LIGHT (red) indicator will light. Turning the adjuster further will light the STABILITY (green) indicator.
6. Adjust the sensitivity in this state.

WARNING

**This product is not designed or rated for ensuring safety of persons.
Do not use it for such purposes.**

Precautions for Safe Use

The following precautions must be observed to ensure safe operation.

- Doing so may cause damage or fire. Do not install the product in the following locations.
 - Locations subject to direct sunlight
 - Locations subject to condensation due to high humidity
 - Locations subject to corrosive gas
 - Locations subject to vibration or mechanical shocks exceeding the rated values
 - Locations subject to steam
 - Locations subject to strong magnetic field or electric field
- Do not use the product in environments subject to flammable or explosive gases.
- Do not use a voltage in excess of the operating voltage range. Applying a voltage in excess of the operating voltage range, or applying AC power to a DC Sensor may cause explosion or burning.
- Doing so may cause damage, fire, explosion or malfunction.
 - Never use the product with damaged body or cable.
 - Never disassemble, repair nor tamper with the product.
 - Never use the product with incorrect power supply or wiring.
- Do not short the load. Otherwise explosion or burning may result.
- Do not use the Sensor in environments where the cables may become immersed in oil or other liquids or where liquids may penetrate the Sensor. Doing so may result in damage from burning and fire, particularly if the liquid is flammable.
- Do not use in water or outside.
- When disposing of the product, treat it as industrial waste.

Precautions for Correct Use

- Do not use the product in any atmosphere or environment that exceeds the ratings.
- Use M4 screws to mount the sensor and tighten each screw to a maximum torque of 1.2 N·m.
- Do not apply the forces on the cable exceeding the following limits:
Pull: 40 N; torque: 0.1 N·m; pressure: 20 N; bending: 29.4 N
- Make sure to tighten the connectors.
- It may take time until the incident level and measurement value become stable immediately after the power is turned on depending on use environment.
- Burn injury may occur. The product surface temperature rises depending on application conditions, such as the ambient temperature and the power supply voltage. Attention must be paid during operation or cleaning.

If the sensing object has a metallic or shiny surface, the E3S-R may not detect it properly. To avoid this situation, place the sensing object so that it is not at right angles to the Photoelectric Sensor.

● Attaching the E39-S Slit

- The Slit can be fitted vertically or horizontally as indicated by the dotted line. Make sure that Slits for the Emitter and the Receiver are fitted in the same orientation.
- Place the packing in the supporter and hook the claws on the indentations in the Sensor head.
- If the supporter is contacting the mounting surface, insert a spacer to separate it. (Refer to *Slit Dimensions*.)
- An operating position accuracy of 0.1 mm max. can be achieved for a Through-beam Sensor without Slits.
