■ Ideal for residential applications

The control board inside the gearmotor facilitates and speeds up installation, at lower cost. Its compact size makes it ideal for residential applications with gates weighing up to 600 kg.

■ Totally safe, reliable in all conditions

Safety is guaranteed by the special, adjustable, oil-bath lubricated anti crushing clutch, and by an intelligent electronic device which, when it detects the presence of an obstacle, reverses and stops gate movement. The FAAC 746 gearmotor performs uniformly, and all commands are supplied by an extremely safe and reliable microprocessor.

■ Long life

Constant, complete oil-bath lubrication of mechanical components plus assembly in a high resistance pressure-cast aluminium body ensure a very long life.

■ Irreversible

As the gearmotor is non reversing, no electric locks need be installed and, in the event of power failure, the release device (protected by a customized key) makes it possible to open and close the gate manually.
